"Perhaps a braver man than Pulaski never drew a sword" is the way one authority described him. His dash and daring, his unparalleled horsemanship and swordsmanship, his propensity to charge into the thick of the battle at the crucial moment, made him the foremost cavalryman in America, and justly earned for him the title of "the father of American cavalry".

Finally, at the Battle of Savannah, he was shot from the saddle by a blast of grape shot, and died at sea aboard an American warship. It is perhaps fitting that his grave should be the broad Atlantic, which was his highway between the countries he served so gallantly. He had achieved the death he sought, in the cause of freedom.

He knew the fullest meaning of Macaulay's immortal passage:

"And how can man die better
Than facing fearful odds
For the ashes of his fathers
And the temples of his Gods."

By Pulaski's devoted service he also established a tradition of Polish and American friendship, which has existed to the present day, and, which has been strengthened and invigorated in each generation by the effective contributions of Americans of Polish descent.

Surely, it would be a worthy and fitting gesture to establish at Warka a memorial that would render useful service to the Polish people.

It would serve to express our thanks to them for the services Pulaski so gallantly rendered us in our time of need—and it would thus enable us to honor the memory of this great Pole who gave true meaning to that chivalrous Polish motto: "For Yours and Our Freedom."

Some Considerations Affecting the Sugar Quota System

EXTENSION OF REMARKS OF

HON. SAMUEL S. STRATTON
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1960

Mr. STRATTON. Mr. Speaker, recent events in Cuba, and especially the virulent anti-American campaign now in progress down there, have dramatically focused national attention on the U.S. Sugar Act, legislation which in part underwrites a substantial financial subsidy to Cuba. Because the President of the United States has recently requested certain amendments in this act, each Member of the House will want to take the time to examine the effect of this act in general. In that connection, I desire to bring to the attention of my colleagues a thoughtful editorial from the Bing-

hamton Press of March 26. The editorial follows:

WRONGFUL SUGAR QUOTA SYSTEM

Burning of sugarcane fields by opponents of the Castro regime raises the question whether Cuba will be capable of supplying the 3 million tons of sugar the United States buys at a \$150 million premium above world prices each year.

Inasmuch as U.S. consumers should be protected in their supply and from gouging prices that would result from a shortage, the case is bolstered for giving the President discretionary power to deal with the Cuban quota. It is not a matter of economic reprisal that U.S. consumers should be secure in their normal sugar supplies.

Beyond the question of assuring U.S. sugar supplies is the ever-lingering doubt that the United States should be subsidizing a regime that appears to be yielding an area strategic to the United States over to Communist infiltration, or worse, to use as a base for anti-U.S. propagations and activities.

The sugar quota system, gouging U.S. consumers as it does, should be abandoned for its wrongful objectives and departures from free enterprise. The purpose is to guarantee a market at higher than world prices for U.S. sugar beet growers. It is only incidental that the system also subsidizes the Castro dictatorship.

Even if the Cuban quota were reduced, the United States could contract for adequate supplies of sugar from friendly countries such as Peru, Mexico, Brazil and possibly even the Philippines. World sugar is in surplus, not in shortage, and it is wrong that U.S. consumers should be forced by their Government to pay an excessive price for it. Serving farm interests, the Government engages in wrongful monopoly and exploitation of fixed consumer need.

Predatory farm interests have dug in their heels, standing against both reasonable measures for dealing with Castro and for equitable relief for U.S. sugar consumers.

If the situation should develop to the point of a sugar shortage, perhaps anger of the public would force Congress to adopt measures that it should adopt in normal opposition to monopoly, price gouging, and exploitation of the many by the few.

The Case for the Student Loyalty Oath

EXTENSION OF REMARKS OF

HON. JOHN J. FLYNT, JR.
OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1960

Mr. FLYNT. Mr. Speaker, those of us who will oppose efforts to remove the loyalty oath requirement from the provisions of the National Defense Education Act believe that the great majority of American college and university students have no objection to the loyalty oath requirement in the act.

It is evident that most, and possibly all, loyal and patriotic young men and women believe that the loyalty oath requirement is a good thing and should be continued.

One of the best articles which I have seen on this subject was prepared recently by Mr. David Franke, a native of Houston, Tex., and an undergraduate college student. This article, which

is entitled "The Case for the Student Loyalty Oath," first appeared in "The Individualist" and was reprinted and distributed on one or more college and university campuses, including Harvard University.

Even though the opposition to the loyalty oath and anti-Communist affidavit requirements has been vocal and well organized, it is encouraging to know that these organized efforts of a small minority have not been successful in brainwashing college students generally.

Mr. Franke has done an excellent and objective job in giving his views on this subject. It is encouraging to believe that his article reflects the thinking of the great majority of loyal young Americans.

It is with pleasure that I include, with his permission, his statement:

THE CASE FOR THE STUDENT LOYALTY OATH (By David Franke)

A major battle has developed over that provision of the National Defense Education Act which requires students to file a loyalty oath and an anti-Communist affidavit. The opposition to the oath and affidavit is vocal and well coordinated. Its defenders, so far as reported in the press, have been scarce. The issue, moreover, is considerably confused by the pretzel logic and ambiguous rhetoric of many of those entering the fray.

What rational position, in the midst of such confusion, can be taken by the student who believes in limited government and individual freedom—and who is eternally suspicious of extensions of governmental power? In an attempt to reach such a decision, let us first look at the facts behind the controversy.

On September 5, 1958, Congress passed the National Defense Education Act. Provisions were included in this act for \$295 million in Federal loans to students in higher education, and for a minimum of \$36.3 million in National Defense Fellowships. Recipients were required (1) to file an affidavit stating they were not members of, and did not believe in or support, "any organization that believes in or teaches, the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods"; and (2) to take the following oath: "I do solemnly swear (or affirm) that I will bear true faith and allegiance to the United States of America and will support and defend the Constitution and laws of the United States against all its enemies, foreign and domestic." Since passage of the act, 12 colleges have withdrawn from the aid program because of these requirements.

In attacking the loyalty clause, some of the opponents are careful to use language and phrases which appeal to conservatives and libertarians. Secretary Arthur S. Flemming of the U.S. Department of Health, Education, and Welfare asserts that the provision "results in unnecessary expenditures on the part of the Government," and the affidavit is being classified by many as an example of Federal control of education. Then there are the various arguments that the clause infringes upon freedom of belief and conscience.

Upon close examination, however, all of these arguments prove to be either false or irrelevant. The increase in Government expenditures is negligible, and if the Secretary is that concerned with economy he has many other areas in his Department in which to wield the axe. Besides, we have the admission of one of his subordinates, Dr. Homer Babbidge, that "some [colleges] such as Yale and Harvard, can afford to withdraw because sufficient funds are available from

other sources." Why offer Federal funds to colleges which have no need of them? Is this not a greater waste of money?

Nor does the complaint that "freedom of belief and conscience" are violated stand under close scrutiny. The act does not require an anti-Communist affidavit of students per se, but only of those seeking financial help from the Federal Government. This is certainly a legitimate claim for the Government to make, especially when we recall that the National Defense Education Act was passed during the panic which followed the alleged launching of the first Soviet Sputnik, and the very title of the legislation reveals it is a defense measure.

By what conceivable twist of logic can it be held that citizens who are loyal should be taxed to help an unloyal student through college as a defense measure? Nor does the student who is loyal, but ashamed to declare his allegiance, have a claim to the taxpayer's assistance. It is only the student who is proud to declare his loyalty who will readily fight for his country when the cold war turns hot—and this is the only student who has any conceivable claim to assistance from his government.

The "freedom of belief" argument, moreover is based on a false theory of individualism which tends to separate freedoms from responsibilities, and on a species of relativism which admits to no moral standards or absolutes outside the individual. We are reminded of Prof. Richard Weaver's observation that for four centuries every man has been * * * his own professor of ethics, and the consequence is an anarchy which threatens even that minimum consensus of value necessary to the political state.

The true individualist is not this type of academic beatnik, who places his egotistical notions above the freedom of his fellow man; rather he is the man of discrimination, who limits government in order to preserve and develop his personality, but allows it the necessary function of protecting the citizenry against subversion and aggression. He realizes that freedom of belief and conscience does not—cannot—include the right to destroy the freedom of others.

As Leonard E. Read warns, in "Government—An Ideal Concept," "It is incorrect to think of liberty as synonymous with unrestrained action. Liberty does not and cannot include any action, regardless of sponsorship, which lessens the liberty of a single human being. To argue contrarily is to claim that liberty can be composed of liberty negations, patently absurd."

Others have objected to the oath-affidavit clause on the basis that it is discriminatory in its application. Harvard University announced it was withdrawing from the program because the clause "singles out students alone in our population—and among students the neediest—as subjects for special distrust." The National Education Association believes such requirements are discriminatory when applied exclusively to special groups. And the Washington Star adds that the affidavit imposes no obligation on the man who can afford to pay his way through school.

What would these critics have Congress do? Impose a loyalty oath on the entire population, in order to avoid discrimination? This certainly would come closer to a witch hunt than the present system. The argument defies all logic. Discrimination of this sort is unavoidable simply because persons are different, have varying occupations, and participate in a wide range of activities.

Students enrolled in the Reserve Officers Training Corps have always had to take a loyalty oath. Does this discriminate in favor of non-ROTC students?

Persons who work for the Federal Government must take a loyalty oath. Should all citizens be required to take the oath, to avoid ferreting out Government employees as

subjects for special distrust? The answer is obvious.

The oaths required of ROTC students and Government employees are not the only precedents in this field. The National Science Foundation Act of 1950 included a loyalty oath and affidavit identical to the one now in the National Defense Education Act. To date more than 12,000 applicants have signed the affidavit to qualify for graduate science fellowships totaling \$43,250,000. Yet no educator has questioned the propriety or necessity of the oath and affidavit in the science program.

The labor reform legislation enacted by Congress this summer prohibits any person who has been a Communist Party member in the previous 5 years from being on the staff, except in a clerical capacity, of a labor union or of an association of employers dealing with any labor organization.

Two additional arguments leveled at the loyalty clause deserve consideration: Secretary Flemming's contention that since such person as Communists "have no scruples about signing such an affidavit and taking such an oath," the requirements are useless; and the claim that they constitute "Federal control of education."

It is obvious that Communists would not hesitate to sign a loyalty oath, if it is to their advantage. But this is precisely why an oath is necessary; many times the only way to prosecute a Communist is by means of a perjury indictment. Consider the famous case of Alger Hiss, who was exempt from prosecution under the existing laws, but was jailed for perjury when he lied under oath to a congressional committee.

Likewise, in 1949 Fulton Lewis, Jr., disclosed that Hans Freistadt, a graduate physics student at the University of North Carolina and an avowed Communist, was receiving a \$1,600 fellowship from the Atomic Energy Commission. The AEC had an FBI report on the student, but was unable to revoke the funds because loyalty oaths were not required of fellowship recipients. Further congressional investigation revealed that another Communist was receiving a \$2,000 grant from the Government.

Senator KARL E. MUNDT, Republican, of South Dakota, neatly summarized the need for a student loyalty oath when he declared that "such an oath provides the Government with the right to withdraw the funds and to suspend the scholarship and perhaps capture what has been spent, if indeed a Communist agent takes advantage of these funds, because it becomes an abrogation of contract, he has perjured himself and is in violation of the law."

But does the student oath and affidavit constitute "Federal control of education"? Yes, it does, in a way which is unavoidable whenever the Federal Government provides subsidies.

Congress, if it is to avoid reckless squandering of the taxpayer's money, must specify both the qualifications of the recipients of its grants, and the general regulations governing the particular subsidy. In the National Defense Education Act, therefore, Congress allots money for specific purposes (strengthening of science, mathematics and foreign language instruction), places restrictions upon its loan recipients (need and capability), and allows for "such other provisions as may be necessary to protect the financial interests of the United States."

If the loyalty oath constitutes Federal control of education, so do these stipulations; yet they were welcomed by many of the same people who are opposing the oath. What justification have they for accepting all the controls which inevitably follow the largesse—except the one demanding loyalty? It is only fair to demand consistency, and to remind those who are seriously concerned that the surest way of guarding against Federal control is to remove the subsidy.

Editorial in the Catholic Transcript on the Imprisonment of Bishop Walsh

EXTENSION OF REMARKS

OF

HON. FRANK KOWALSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. KOWALSKI. Mr. Speaker, the whole free world is ablaze with indignation over the imprisonment of Bishop James E. Walsh, of the Maryknoll Fathers, by the rulers of Communist China.

No more eloquent statement of the issues involved has been made than that in an editorial published in the current issue of the Catholic Transcript, which is published in Hartford, Conn., and has a wide readership in the archdiocese of Hartford, the Diocese of Norwich, and the Diocese of Bridgeport.

Under unanimous consent, I bring to the attention of my colleagues in the House this editorial from the March 24 issue of the Catholic Transcript:

THE CROSS OF CHRIST FOR BISHOP WALSH

To us in the free world, the Church of Silence is like an abyss wrapped in darkness. We know it is there, but usually can see nothing of it, and so come to think of it as empty or under paralysis. But periodically a shaft of light plays over the abyss, picking out and enabling us to see momentarily now one bit of the unknown land, now another. Though brief and fragmentary, these glimpses are enough to show us that the impression of emptiness, immobility is false. For we perceive that, in the darkness, in the silence, people are suffering for Christ, enduring for Christ, sharing a portion of His Passion, draining the bitter cup which was pressed to His lips.

In the last few days, for example, we have all heard of the fate of Bishop James E. Walsh, of Maryknoll. For several years it was known of him only that he was somewhere in Communist China, but whether living or dead, whether at liberty or in some verminous hole, no one could tell. Now the Red news agency informs us that he still lives, but has, in his 70th year, been sentenced to 20 years in prison. Spotlighted for a moment, the bishop again disappears.

Unquestionably he expected what has now come about. More than 40 years have passed since he first went to China. He has been in the midst of all the changes which the country has experienced in that interval. He contributed signally to the remarkable growth of Christian missions there. He knew at first hand the shudder of apprehension which ran through China when the Japanese began hacking away at it in the 1930's, saw the scattering of the missions during World War II, their brief revival thereafter, and then the spread of the Communist blight.

He chose to return to China in 1948, and, ever since, has firmly declined every suggestion that he depart. Four years ago he said that he intended to remain, to give by his presence what help he could to the Chinese priests, who could not leave. "I don't wish to do anything to separate myself from them of my own volition * * *. Internment and death are simply the normal risks that are inherent in our state of life, a small price to pay for carrying out our duty, in our particular case a privilege because it would associate us a little more intimately in the cross of Christ."

These words lack the passion, the flaming eloquence of Ignatius of Antioch as the latter

went forward to martyrdom at the end of the first century. But in their quiet way, so characteristic of Bishop Walsh, they breathe the same spirit as animated Ignatius and many another martyr in many another age. Suffering and death are no more than the normal risks inherent in the vocation of witness to Christ. They are the very cross of Christ here and now, as it comes to a participant in His priesthood. And, as was the case on Calvary, the defeat will issue in victory; the tree of death will bear fruit, an incredible abundance of fruit over and over and over again.

We are, of course, stirred to the depths of our souls by such Christian heroism and such dramatic evidence that, in our day, the warfare and wonder of Good Friday continue unchanged. But, while we rejoice in the priestly fortitude of Bishop Walsh and what it augurs for the future of the Church of Christ, we must not forget that all is not yet over for him. He needs, and has a right to, our prayers, that he may endure what remains of his ordeal without faltering.

The Problem of Medical Costs After Age 65—A Thoughtful Discussion by the Amsterdam (N.Y.) Evening Recorder

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. STRATTON. Mr. Speaker, judging from the mail which many of us in the House have been receiving lately, there is deep concern on the part of many, many people in this country about the pressing problem of meeting medical costs for persons over the age of 65—persons who become more prone to illnesses at the very time of their lives when their own earning power is at a minimum.

Whatever may be the best legislative approach to deal with their problem, I believe we will all agree that the problem itself is a serious one. In that connection, I wish to bring to the attention of Members of the House, a very able discussion of the impact of this situation which appeared recently in an editorial in the Amsterdam (N.Y.) Evening Recorder, of March 17. The editorial follows:

MEDICAL COSTS AFTER 65

It may be true, as has been charged, that the approaching political campaign is responsible for some of the interest in proposals to make it easier for those over 65 to pay medical bills. But there is more to it than that.

The Senate Subcommittee on Problems of the Aging reports that 80 percent of the 16 million Americans now over 65 have an annual income of less than \$2,000, while 60 percent of them get less than \$1,000. That does not leave much for medical bills which tend to rise in the later years of life.

Nor are the members of the subcommittee the only ones concerned with this serious problem. A bill has been introduced in the House to help make it possible for our elder citizens to make both ends meet. Here in New York State, Governor Rockefeller has urged the legislature to make all group insurance convertible to individual coverage for retired citizens. He also has proposed

improved State care, especially for the mentally ill.

While the extension of social security, as proposed in Congress, would provide the widest coverage, it might be less than adequate unless supplemented by other insurance or pensions. It does, however, make sense, to encourage the individual's incentive to provide for himself.

One way or another, some means must be found to help those over 65 to help themselves. Meanwhile, it might be wise to adopt plans along the lines suggested in Washington and in Albany. Either plan would be more economical and certainly much more dignified than care in public institutions or government handouts.

Brotherhood 52 Weeks a Year

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. RODINO. Mr. Speaker, the following editorial from the March 24 edition of the Independent Press pays a well deserved tribute to the New Jersey region of the National Conference of Christians and Jews and to its well known director, Howard J. Devaney. I might mention that I know Howard Devaney personally, and that the activities outlined here are only one more example of his outstanding and dedicated work in civic affairs.

The editorial follows:

BROTHERHOOD 52 WEEKS A YEAR

Any successful organization depends on active citizen support, effective programing and able professional leadership. The New Jersey region of the National Conference of Christians and Jews has all three of those important ingredients plus some added elements that make it so successful. And a good portion of the credit goes to the professional leadership of our neighbor, Glen Ridge resident Howard J. Devaney, the Regional Director.

Each year the New Jersey region has a number of institutes on human relations in cooperation with many police departments throughout the State. A highlight of this year's activity is the 6-session course now underway in cooperation with the Asbury Park police department. This Institute on Community Relations has 79 police officers with one session devoted to "The Policeman's Role in Labor-Management Relations" and another on "Police-Press Relations."

Devaney has good background for his emphasis on police-community relations. For 8 years he was president of the New Jersey Police Benevolent Association and was also first vice president of the National Conference of Police Associations. His past training and current experience have placed him in demand for speaking engagements and professional consultation.

The National Conference of Christians and Jews activity list, although sprinkled with police programs, does aim to help everyone understand the other person. Youth programs are expanding. One week each summer the regional office sponsors a Brotherhood Camp. Last summer the camp held in conjunction with the New York region was so successful that this year's, to be held at Stokes State Forest, will have an enrollment of young people from the entire east-

ern seaboard with seven NCCJ offices cooperating. In addition, the national conference helps sponsor 1-day youth institutes; an example is the Elizabeth Youth Good Neighbor Council's to be held at Rutgers University School of Education on April 23.

Teacher training continues as long as teachers actively teach. The national conference recognizes this fact and sponsors workshops through which teachers can continue their professional training. This spring teachers in the Somerville area are meeting every week for a workshop in human relations, jointly sponsored by Trenton State College and the national conference. In addition, the 1-week and 3-week summer workshops at Rutgers University draw large numbers of teachers.

The national conference tries to keep abreast of new ideas in programing. Devaney has just returned from a 2-day annual meeting of Girl Scout professional workers from New Jersey and New York at West Point. There he served as coordinator of a program which involved top business personnel for the purpose of evaluating attitudes of professional workers.

The New Jersey region aims to make brotherhood more than just a week a year theme. With Howard J. Devaney as director, the region is developing important lay support and conducting worthwhile, meaningful programs. These three factors blend together to advance brotherhood. Congratulations to the National Conference of Christians and Jews are very much in order.

New President of Greater Wilkes-Barre Junior Chamber of Commerce

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of Friday, March 25, 1960:

JUNIOR CHAMBER OF COMMERCE CHIEF

We salute a young man of devoted leadership—Albert G. Albert of Loomis Street—who became the 23d president of the Greater Wilkes-Barre Junior Chamber of Commerce on Wednesday night. Mr. Albert joined the Greater Wilkes-Barre Jaycees in May of 1958 and within a year became a member of the board. He continued his climb.

He has headed numerous projects for the group and recently initiated a program to have Jaycee representation on all 18 committees of the Greater Wilkes-Barre Chamber of Commerce, a program designed to promote the community-mindedness of the future leaders of the valley.

Mr. Albert has a record of outstanding achievements not only in the Jaycees but also in many civic and religious organizations in this area. A young man of 29, he is general manager of Bloomsburg Metal Co. in Wilkes-Barre.

Among his affiliations are the Kassab-Joseph Post, CWV 1487, secretary; YMCA Toastmasters Club; CYC membership committee; BPO Elks, 109; and we can add participation in the Camp Acahela drive and on the United Fund committee.

Mr. Albert's accomplishments symbolize the creative and energetic type of young men throughout our country who actively promote the Jaycee movement. His outstanding record indicates an even more progressive year ahead for the Greater Wilkes-Barre Jaycees. He has our best wishes.

Gold

EXTENSION OF REMARKS

OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. RIVERS of Alaska. Mr. Speaker, as many of my colleagues realize, there are two principal facets to the predicament in which our country finds itself today in regard to gold. The first is the alarming decrease in the gold bullion stock of the United States caused by adverse trade balances which have been payable either in gold at \$35 per fine ounce or in dollars, which under present policy may be invested in this country but later redeemed in gold upon demand. When we note that our gold bullion on hand has gone down from \$40 billion at the end of World War II to about \$19 billion now, it gives us pause. When we discover, however, that the foreign dollar credits of which I spoke come to about \$16 billion for which gold could be demanded at \$35 per fine ounce, the only possible reaction is one of shock, for we see that there would be only \$3 billion worth of our gold bullion left in our hands if foreign countries were to reduce all of their present dollar credits to gold. Now I do not expect such a run on our bank, so to speak, but what I say highlights the seriousness of the situation.

The other facet is the plight of our gold mining industry which is rapidly going out of business because the price of gold has not risen above \$35 per fine ounce since 1934.

Bills introduced in Congress in recent years to raise the price of gold from \$35 to \$70 per fine ounce or to subsidize its production or to allow its sale on a free world market have gotten absolutely nowhere, in the face of opposition from the U.S. Treasury. The Treasury has insisted that any such move would upset the presently stabilized basis for settling trade balances throughout the free world, cause inflation by increasing the base for credit expansion, and bring about worldwide repercussions. Accordingly gold bills introduced last year by some of my colleagues and myself to help our gold miners are hopelessly bogged down in committee. This situation prompted me a month ago to seek a formula which would relieve the depressed condition of the gold mining industry without changing the Treasury's price. This led to the idea of a bill to stop the Treasury from selling gold for use in the arts and industries, and letting our gold producers sell their gold on a free market basis direct to anyone licensed by the Treasury to purchase gold for artistic or industrial purposes or for resale for such purposes.

In preparing to have this idea drafted in bill form, a study of existing regulations disclosed that placer gold miners may now sell unretorted, or otherwise unprocessed placer gold, directly to manufacturing jewelers, industrial users, or anyone in the United States without restriction. However, there does not seem

to be much of a market for placer gold in its natural state, even though the Treasury does not stock such gold in the form of nuggets and gold dust and is therefore not competing with placer gold miners in the sale of such gold. On the other hand, persons offering processed gold for sale may sell only to licensed dealers, refiners, or industrial users at any price which the market will afford or, in the alternative, to the U.S. Treasury at \$35 per fine ounce. Of course, in making sales of such processed gold to the dealers and industrial users the producers are competing with the Treasury which sells to such users at one-fourth of 1 percent over \$35 per ounce.

At first blush it would appear from the foregoing that barring the Treasury from making further sales of gold bullion to industrial users would enable the producers of processed gold to get a much better price. Another look, however, discloses that the free world price hovers close to \$35 per fine ounce—as shown by the London market which fluctuated during the last year between a low of \$35.0429 and a high of \$35.1407. With licensed private dealers and refiners and industrial users allowed to purchase gold on the free world market, the gold miner would gain little by the discontinuance of sales by the U.S. Treasury. What it all boils down to is the fact that the present gold policy of the United States in fixing the price of gold at \$35 per fine ounce, and settling our international trade balances on that basis, and making sales of gold to foreign central banks at that figure has substantially stabilized the price of gold throughout the free world at close to \$35 per fine ounce.

After going around the circle, so to speak, I have arrived back where I started, which is, in effect, that the only perceptible way to get the miners a meaningful increase for their gold would be to change the law to raise the price to \$70 per fine ounce or thereabouts, or provide a subsidy large enough to accomplish the same result.

My study on the gold problem has brought to light certain significant figures for 1958, not as yet published by the Treasury, showing that industrial uses for gold in the United States now exceed domestic production. This will aggravate the problem of our decreasing stock of gold. The figures for 1958 follow those for 1957 which I use for contrast:

	1957	1958
Value of gold produced in the United States.....	\$63,000,000	\$61,565,000
Scrap rebought by Treasury, dealers, and private refiners.....	27,716,220	26,924,135
Total gold receipts.....	90,716,220	88,489,135
Sold for arts and industrial uses:		
By Treasury.....	21,136,850	27,008,450
By private refiners and dealers.....	57,329,370	64,079,470
Total so sold.....	78,466,220	91,087,920
Net gain in gold during 1957.....	12,250,000	
Net shrinkage in gold during 1958.....		2,598,785

Thus in the year of 1958—the industrial need for gold in this country increased by \$14½ million over 1957. The figures for 1959 are not yet available. To conclude this discourse on gold, let me express my opinion—held by many others—that with gold production going down, industrial uses for gold going up, the amount of gold in hand becoming disproportionately small as compared to our ever increasing volume of outstanding currency and credit, and our gold bullion stock shrinking to where it will have reached the vanishing point in a very few years, something has got to give in the not too distant future.

I do not know the answer, but suggest that all of us had better start thinking about it and formulating some appropriate action as soon as possible.

Health and Politics

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. KING of California. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the Record an excellent editorial from the Washington Post today, March 29, 1960, entitled "Health and Politics."

There being no objection, the editorial was ordered to be printed in the Record, as follows:

HEALTH AND POLITICS

Medical care for the aged is evidently going to become an issue in the presidential election campaign. We think that President Eisenhower has put his party not only on the unpopular side of this issue but also on the wrong side of it. No one should have been surprised that the three avowed candidates for the Democratic presidential nomination were unanimous in endorsing the Forand bill when they spoke together on Sunday at a rally of 10,000 members of the United Auto Workers Union. No one should have been surprised that they were roundly cheered and applauded for their stand. No one should have been surprised that the President was booed for his opposition to the Forand bill.

The Forand bill, to quote its title, is a bill "To amend the Social Security Act and the Internal Revenue Code so as to provide insurance against the costs of hospital, nursing home, and surgical service for persons eligible for old-age and survivors insurance benefits." It would increase social security contribution rates of employers and employees by one-fourth of 1 percent each and of the self-employed by three-eighths of 1 percent. It would operate in much the same way as private insurance programs now operate—except that it would provide insurance for the period of old age when insurance is least readily obtainable and most difficult to pay for. Eligible persons would receive services from any qualified surgeon or any hospital or nursing home which agreed to participate and to be paid for services insured under the plan. The surgeon would be chosen by the patient.

Why the American Medical Association, like the National Association of Manufacturers, should oppose this sensible form of prepayment for the inevitable costs of illness in

later life is hard to understand—save as a symptom of the kind of occupational obtuseness which has become a characteristic of the AMA on such issues. Why the doctors should call this system of insurance socialistic passes all understanding. As Senator STAMMINGTON observed, "There is nothing in it that would affect the American system of free medicine. This plan deals only with how medical bills are paid. The doctors, the hospitals, the nursing homes, the way medical care is provided—they are all left alone."

Why automobile workers—and wage earners in every other trade and industry—should be enthusiastically eager to pay during their productive years for this kind of protection in old age should be readily understandable to anyone in political life. There is no more compelling aspect of social security.

Byelorussian Independence Day

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. DINGELL. Mr. Speaker, Byelorussia is the vast country extending from the eastern borders of Poland to the approaches of Moscow. It is a cold, but fertile land, and its inhabitants are rugged and rustic rural workers. These people, though numbering a bare 10 million today, have been living in that country from time immemorial. There they led a simple life and were fairly content with their lot, until several centuries ago their country was overrun by the Moscovites, as the Russians were then called. They were brought, much against their will, under the rule of autocratic Russian czars. During that time they were neither free nor happy. They were oppressed, and the czarist government did its best to obliterate all traits of nationalism or national feeling among them, but the Byelorussians persisted in their opposition. They struggled against that regime with all the means at their disposal, and successfully maintained their national identity. And, in 1918, when the czar's government was overthrown, they had their chance for freedom and independence.

Byelorussian leaders seized upon this opportunity and in March of that year proclaimed their independence and established the Byelorussian Republic. Then for about 2 years these unfortunate but brave souls waged wars on many fronts for the preservation of their independence and for their national existence. But the forces opposing them were formidable. Even if they could settle their differences with the Poles on the west and others on the south, they could not cope with the aggressive and constantly advancing Red army of the Soviet Union. In 1921 the country was overrun by Communist Russian forces and it was made part of the Soviet Union. Thus came to an end the free and independent Byelorussia after a brief and precarious existence of about 2 years.

Today these struggling and hard-working Byelorussians are held down in their

homeland by Communist totalitarian regime and do not enjoy any of the freedoms which many of them regard as their hard-earned reward, a reward which was taken away from them by heartless Russian Communists 39 years ago. On the observance of the 42d anniversary of Byelorussian Independence Day, one can ardently hope that these deserving people will once more regain their freedom and enjoy it in their homeland.

Resolutions Adopted by and Concurred in by the National Association of Postmasters, Sixth Indiana Congressional District

EXTENSION OF REMARKS

OF

HON. FRED WAMPLER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. WAMPLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to bring before the House the following series of resolutions adopted unanimously by the postmasters of the Sixth Indiana Congressional District of the National Association of Postmasters.

It is the very reasonable and far-sighted wish of the postmasters of the Sixth Indiana Congressional District, which I have the distinct privilege to represent, that these resolutions shall serve as guidelines for the House and Senate Committees on Post Office and Civil Service.

The resolutions are designed to express what I believe to be fair and equitable goals and I commend them to the attention of the respective committees.

A copy of the resolution adopted by and concurred in by the National Association of Postmasters of the Sixth Indiana Congressional District. This meeting was held in the American Legion hall in the city of Crawfordsville, Ind., on February 17, 1960. The resolutions were adopted unanimously.

"Be it resolved, That section 211 of Public Law 85-426, 85th Congress, H.R. 5836, dated May 27, 1958, which is titled "Determination of Class of Post Office and Compensation of Postmasters and Certain Employees," be rescinded and that 100 percent of gross receipts be used as the determining part of gross receipts in the counting of such receipts toward the compensation of postmasters and certain other employees, whose salaries are predicated to some extent upon the gross receipts of the post office in which they work. We feel that this section of this law is aimed directly at postmasters and as such, works an extra hardship upon this class of employees. For this reason, we think that it should be repealed.

"Be it resolved, That the 2½ percent of salary, which was given to postal workers on a temporary basis, be made permanent at this session of Congress. This salary raise of 2½ percent will expire during this term of the Congress. We honestly believe that the postal workers of this country are entitled to this 2½ percent salary raise on a permanent basis rather than upon a temporary basis.

"Be it further resolved, That an additional 10 percent raise in salary rates should be

made effective at once to compensate for the rise in living costs and to keep all postal employees and other Government workers on a comparable basis with the employees of private industry.

"Be it resolved, That Congress made available sufficient funds that a 40-hour workweek for postmasters may become a reality rather than a vision. If this idea can be accomplished without legislation, it is our sincere hope that the 40-hour workweek may be put into practice immediately, however, if legislation is necessary to accomplish this end we ask that the Congress move immediately to this end in the hope that a 40-hour workweek for postmasters may become a reality immediately."

Why We Must Abolish the Army, Navy, and Air Force

EXTENSION OF REMARKS

OF

HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, at the time the Congress presumably unified the Armed Forces to get rid of duplication it achieved something else. It got triplication and quadruplication instead of unification.

Our colleague from Connecticut—Representative FRANK KOWALSKI, a retired U.S. Army colonel with 33 years of continuous service as infantry commander, battalion and regimental commander, Chief of Training, G-3, European theater, and later Deputy Military Governor of Japan under General MacArthur, first commandant of the Army Command Management School until his retirement in 1958—has written an excellent statement of the case for true unification. I have found both junior and senior officers of the Armed Forces, as well as numerous enlisted men, firmly convinced that only a complete unification will be adequate to meet the needs of the American people for a unified defense force. The next President, whatever his name, will certainly want to reexamine the organization of the Department of Defense.

I believe that Congressman KOWALSKI has made a brilliant contribution to this reexamination, not only in his bill, H.R. 9874, but in an article appearing in the April 1960 issue of *True*, written in cooperation with Martin L. Gross, which I commend to the attention of the Members. He writes:

WASHINGTON, D.C.—If war should erupt tomorrow, the Army's crack airborne divisions at Fort Bragg, N.C., and Fort Campbell, Ky., are poised and ready for combat anywhere in the world on 2-hour notice. There is only one drawback; they don't have enough planes.

Repeated Army requests to the Air Force to equip these units with transport planes have been turned down, as have their pleas to at least earmark specific planes for emergency call. According to testimony before the House Appropriations Subcommittee, the planes available now could airlift only one of the three strategic divisions.

To the Army, the additional planes would mean the difference between a crippled out-

fit and a fully integrated fighting force; the Air Force, however, sees the Army request as an attempt to usurp their hard-won status as an independent service. This Army-Air Force battle is, at present a stalemate.

This type of pettiness between the armed services has contaminated almost every aspect of our defense structure, from budget to Reserve training, supply, missile warfare, and even air defense. In fact, the independent existence of our three major fighting forces—the Army, Navy, and Air Force—has created a meaningless miasma of waste, rivalry, inefficiency, and duplication that is uselessly devouring a huge chunk of our \$41 billion defense budget, and could eventually destroy us.

In the Mediterranean area, which I visited last summer, the Navy has built two air bases of its own—Rota Naval Air Base in Spain and Port Lyautey in Morocco—while several Air Force bases in the sector, equipped to handle the same planes, are often half used. In fact, one giant base in Morocco is completely deserted.

Not long ago, the Air Force initiated a frantic and expensive campaign to recruit and train fighter pilots for air defense, while at the same time the Navy and Marines were discharging some of their trained pilots as part of a reduction in force.

The waste, in men and money, is often patently ridiculous. At the Middletown air materiel area, the Air Force had accumulated \$8,400,000 of excess helicopter parts, which they planned to sell off as surplus at a fraction of the original cost. Meanwhile, the Army was placing new orders for the same parts, with the same manufacturer, for the same model helicopter. Only the fortunate interference of the General Accounting Office helped salvage part of this amazing fiasco.

In the missile field, after wasting half a billion dollars and perhaps a year's time by producing duplicate IRBMs—the Air Force Thor and Army Jupiter—we have now learned that, despite the well-meaning last minute intervention by the Defense Department, not even the rocket engines are interchangeable.

During the development of the rockets, according to congressional reports I have secured, both the Air Force and Army hoarded scientific information from each other almost as scrupulously as from the Soviets. When the Defense Department ordered the rocket engines made by the same contractor (the Rocketdyne Division of North American Aviation) the two services jealously insisted on making individual minor design changes. The contractor was simultaneously—and expensively—making two different rocket engines for the Government for the same job.

Neither are the men interchangeable. Now that operational control of the Jupiter has been shifted to the Air Force, trained Army missile artillerymen at Huntsville, expert in Jupiter firings, have been replaced simply because they wear the Army's olive green instead of the Air Force's blue.

And, to take an even more ridiculous example, the Air Force is now claiming that Air Force personnel should be stationed aboard the Navy's new ballistic-missile submarines in order to shoot off the Polaris missile. "Anything that flies belongs in the Air Force" seems to be their theory.

Another scene of the interservice battle is Fort Hamilton, an Army base in Brooklyn, where duplication is costing the taxpayers a cool \$10 million a year. Four hundred soldiers, 50 officers, and 400 civilians operate the fort for the sole purpose of processing Army men coming in and leaving the country by air—a job which was already being done efficiently for the other services at McGuire Air Force Base in nearby New Jersey.

In addition to paying for the useless Hamilton, the Government is also forced to maintain a special Military Air Transport

lounge at Idlewild (\$18,000 a year) for these men, bus service from Hamilton to the airport, and a duplicate force of 23 airmen at Idlewild to reprocess this separate Army shipment.

The Army's arguments for this \$10 million pork barrel are transparently thin—the lack of sufficient transient space at McGuire (even though Fort Dix is next door) and the statement that Air Force doctors do not require medical exams prior to takeoff, while the Army does. Even a former commanding officer of Hamilton recently told me that he considered the fort to be a complete waste of money and manpower.

During the last 5 years, the three services have avariciously fought each other for the lion's share of almost \$200 billion spent in defense funds—each firmly convinced that the Nation would be completely secure if only their individual projects could be accomplished.

The combined result of their efforts is easy to state, but difficult to swallow: (1) an ill-equipped miniature Army of 14 divisions; (2) a Navy—whose only modern weapons are a few nuclear-powered submarines—weighted down with the outmoded concept of surface ships and outnumbered 4 to 1 by the Soviet sub fleet; and (3) an Air Force of relatively slow SAC bombers vulnerable to fighter plane and antiaircraft attack, and 40 exposed SAC bases lacking even a system for keeping bombers in the air around-the-clock.

Our meager supply of ICBM missiles (three at this writing) are stretched skyward at Vandenberg Air Force Base in California unable to fire without a 15-minute leadtime and vulnerable to a nuclear hit even a hundred miles away. "Hard" (concrete-emplaced, underground stored) solid-fuel ICBM's are still years away, even though we have already sunk billions into the missile program.

The answer to the riddle of how to extricate the world's leading power from so mismanaged a defense picture—an answer that unfortunately has vociferously been blocked by certain nearsighted admirals, generals, powerful lobbyists for retired officer groups, administration leaders, and even some Congressmen—is the complete unification of our three services into one U.S. Armed Forces, with one job and one uniform.

I have recently introduced a House bill, H.R. 9874, that will eliminate the three services and reorganize the new Armed Forces along the lines of "function" instead of the outmoded concepts of land, sea and air, which have become ridiculous in an era of missile-launching submarines and paratroop infantry.

In dollars and cents, I believe full unification could mean a saving of \$7 billion a year—a straight 15 percent of last year's \$46 billion defense expenditure.

"The interservice rivalries are worse than before," the head of the Defense Appropriation Subcommittee recently commented. The reason, one of the best arguments for unification now, is the shameless battle for the defense dollar and control of sophisticated weapons—part of each service's strategy to make themselves indispensable, and immune to destruction by the others.

As a result, instead of three services, we have more like a dozen, each with its own costly overhead. Each service flies combat planes, each has missile arms, and the prime offender—the Navy—has its own surface fleet, its own missile service both above and under water, its own army (the Marines), and its own Air Force, both land and sea based.

My bill will unite these diverse groups into one, with branches logically organized according to jobs that have to be done. One of the two major branches would be planning, staffed by professional military planners trained from college on. They will develop military plans for the entire Armed

Forces on every level for today, 5, 10, even 25 years ahead.

The second branch would be combat, in charge of the operations of all field units, whether they are surface vessels, land troops, or ICBMs. Assisting these two major groups would be seven military agencies—Research and Development, Training, Personnel, Procurement, Transportation, Service, and Inspection, all of which might be incorporated into a third major group support.

In a typical military situation—air defense, for instance—the planning group would determine what was required in terms of men, weapons, and strategy. Research and development, in coordination with procurement, would have the weapons designed and built. Personnel and training would provide the skilled men who, together with the weapons, would then be delivered to combat for operational use.

Compare this with the circus-like squabble between the Air Force and Army that is now fouling up our weak air defense capability; a power struggle that vividly dramatizes the tragic failings of our present military organization. Air defense has historically been divided between Army antiaircraft and Air Force fighter planes. However since missiles have replaced both of these techniques, both services have been building parallel antiaircraft missile systems that have thus far cost us \$3 billion and have still not provided us with proper air defense.

The still-unresolved tussle revolves around the Air Force Bomarc, an expensive, long-range (400 mile), quick-firing (30 missiles in 2 minutes), 2,000-mile-per-hour ground-to-air missile, and the Army's Nike-Hercules, a shorter range (75 miles), relatively inexpensive, but slower firing (one-third of a squadron in 15 minutes) weapon. At the height of the fight, the opposing contractors—Western Electric for Nike, and Boeing for Bomarc—took full page newspaper ads on the virtue of their system, while the services slugged it out in congressional halls. The Army sent Congress a strong memo while the Air Force leaked the top secret—and unfavorable—results of a Nike-simulated-combat test.

A controversy that would have been settled in planning in a unified service has now split the U.S. Congress and even reached the White House. The Senate Armed Services Committee recently declared that the Nike was virtually obsolete, while the House decided that the Army plan was cheaper and slashed the Bomarc budget. The dilemma was thrown into the lap of the President who has announced a now common, but potentially dangerous military compromise—a little of each.

Service bickering touched the ridiculous recently when Army suggestions to build the \$10 billion Zeus antimissile missile were pooh-poohed by the Air Force as visionary—only to have a top Air Force general back the Army's argument. Lt. Gen. Laurence S. Kuter, Air Force head of the North American Air Defense Command, states that he has an urgent requirement for the Army's anti-ICBM Zeus, and has asked the Pentagon and the Joint Chiefs to reverse their stand against developing the weapon.

The missile war between the services points up the gain unification would make by creating a single research and development division, headed either by a civilian or military man. (In the new Armed Forces I am proposing, only combat and training groups need be uniformed military men.) R. & D. is a \$14.5 billion a year weapons business, spurred on by private contractors who supply 70 percent of the weapons ideas and who help the competing services multiply the number and duplication of projects.

The waste is monumental. According to the House Committee on Government Operations, \$2.3 billion was spent last year on antiquated weapons projects. Services start,

then phase out before completion, projects that probably would never have been initiated under a unified R. & D. setup—follies like the quarter-of-a-billion-dollar Navy jet seaplane, the P6M. Its sole memorials are six delivered airplanes and a \$12 million base in North Carolina.

Recently the Air Force and Navy eliminated overlapping projects to develop high energy boron aircraft fuels—after spending \$232 million. At the same time, the Air Force was being refused—on the grounds of economy—an equivalent amount needed to keep 68 SAC bombers in the air around the clock to prevent total destruction of our retaliatory forces while still on the ground.

A single efficient procurement and supply department, instead of our present three agencies, would save more millions. Twenty-six recent contracts of the Navy and Air Force analyzed by the General Accounting Office showed Uncle Sam had been overcharged \$42 million. In the Air Force cases, the Accounting Office placed the blame at their procurement group's "inadequate analysis of contractor's figures" and a naive tendency to accept their word for fact.

The mere existence of separate supply agencies, reluctant to talk to one another, has created some ludicrous examples of not only duplication but even hoarding of supplies. In one case the Navy was able to ship JP-4 fuel from Perth Amboy, N.J., to Florida while the Air Force planned a shipment of the same fuel from South America to New England. When they learned of the comical situation they attempted to make an exchange, but negotiations finally broke down. The two ships sailed in opposite directions on a \$33,000 nonpleasure voyage for the American taxpayer.

The lack of liaison is unbelievable. Once when the Federal Government was disposing of a mass of hacksaws and frames at a fraction of cost the Navy was buying thousands of new hacksaws from the same manufacturer at full price. Army supply then graciously repeated the incident, this time with hammers. In addition, each of the services insist on minute differences in "specs," even on such things as folding chairs, needlessly raising the cost for all.

A new byproduct of the supply snafu has been a tendency by the services to hoard—to buy more than they need as a possible hedge against lean budget days for their branch. A Department of Defense survey of supply management recently found that inventory of general items was "long" by 34 percent—or \$100 million worth. There is an overlap in distribution patterns, duplicate items stockage, and cross backhaul, the report states unemotionally.

Two dramatic cases of hoarding were uncovered. The Air Force promptly canceled \$46 million in contracts when millions of dollars in excess electronic equipment were found in four supply bases, including ones in San Antonio and Oklahoma City. The Navy was found "collecting" a surplus of 793 spare aircraft engines, at a cost of \$68 million, yet they had orders in for 204 more.

To their credit, the Defense Department has recently attempted to make the services coordinate their supply efforts—but without success. As of today, only 20 percent of our defense needs are being supplied through centralized procurement.

Unfortunately, the waste can be tallied in more than money and missiles. Our lack of unification has been equally harsh with vital manpower, often doing the same job in three different services.

In all, I estimate that total unification of the services would release 500,000 "duplicate" and useless servicemen who could make up the enlarged muscle of a single fighting force.

In post offices and stores throughout the country 7,000 recruiting personnel from four services (counting Marines) are doing a job 2,000 could handle in a unified service.

Thousands of more men operate three entirely separate communications networks in Europe, Africa, and the Mediterranean. The Navy, when queried by me on this, merely stated that they "were studying it."

I have received letters from our security agents, especially CIC men in Japan, complaining that they were doing the same work—often on the same case—as Air Force Intelligence. The reserve situation is equally befuddled. Each service maintains staffed but only partially used armories and reserve training centers in almost every major city—instead of a single civilian training facility.

In Europe, I visited large hospitals for servicemen and their dependents, each operated by separate services with its own administration—and each ultimately headed by a different two-star surgeon general and his staff in the Pentagon. The waste of trained enlisted men and officers in the administration of three separate transportation, judge advocate, special services, engineers, ordnance, finance, and other groups, is virtually unbelievable.

If unification is so desirable, why hasn't it been accomplished heretofore? The answer, I believe, is the false confidence the Nation has gained from a series of phony plans in the name of unification. One of the greatest obstacles has been the creation—and failure—of the Joint Chiefs of Staff idea.

"It seems quite apparent in this regard," says a House Committee on Appropriations report, "(that) the Joint Chiefs of Staff, as a corporate body, is not providing the kind of advice and leadership which this country requires." Gen. Maxwell Taylor, former Army Chief of Staff, reiterates this, pointing out the Joint Chiefs spend much of their time in useless and wasteful fighting for their individual services.

My unification bill, by eliminating the separate services, dissolves the Joint Chiefs. Instead, the Secretary of Defense, a civilian, will be aided by a deputy secretary chosen from among the Armed Forces and limited to a 4-year term. Their council of war will be made up of the chief of planning, the chief of combat, and either the chief of support or any of the seven chiefs of the supporting groups—training, procurement, transportation, R. and D., service, personnel, inspection—whose advice is needed.

The chiefs of combat and training will necessarily be commissioned officers, but all other chiefs may be career civilians with years of experience in their specialty. All chiefs shall be appointed by the President, with the consent of the Senate, and shall serve 4 years unless reappointed. The combat chief, however, shall not be reappointed. All deputy chiefs shall be chosen from the ranks of commissioned officers.

In my bill I have carefully avoided the establishment of a single, all powerful Chief of Staff as proposed by General Taylor and other fellow critics of our military organization. Not only is it uncalled for in a single service dominated by a Secretary of Defense and chiefs of functions—but we should be wary of creating a potential "man on horseback" who might overshadow the President and possibly seize power in an emergency.

Specialization will be a key factor in the new U.S. Armed Forces. Unlike World War II when, according to a Pentagon-supported study, "The Ineffective Soldier," whole divisions were lost because of misuse of skills, the new service will train men in a specialty and try to keep him there with proper incentives. Although combat and training groups will be uniformed, career civilians will be used whenever possible—especially since they ultimately cost less, are often better trained, and can have a lower turnover rate.

Interservice fights, now the bane of our system, will be eliminated. Strategy conflicts—say between air-to-ground missiles and conventional nuclear bombs—will be de-

cided by the Chief of Planning, while operational clashes will be arbitrated by the Chief of Combat. To them it will be an objective military problem, not an emotional defense of a partisan service viewpoint.

"We'd be better off if we all wore the same uniform," Vice Adm. Hyman Rickover, father of the atomic submarine, reportedly stated. I concur and will suggest to Congress that a unified service be outfitted in a single new uniform, a symbol of the discarding of old loyalties. We should also eliminate two other divisive elements, the separate promotion lists and the separate service academies. The present promotion system makes it imperative for an ambitious young officer to agree with his service viewpoint, even if he is not convinced it is in the national interest.

The three service academies—West Point, Annapolis, and Colorado Springs—should properly be campuses of the same Armed Forces Academy. New traditions, common to all three, should be developed and the curriculum of future officers revamped from its archaic emphasis on naval boiler-room engineering or the strategy of General von Clausewitz. Whenever possible we should use civilian campuses to train cadets in electronics, geopolitics, business administration, and missile engineering.

In my 33 years of Army service, I have spoken to hundreds of career men who agree on the urgent need for total unification. Public opinion polls show the majority of Americans have a similar viewpoint. Yet all unification attempts have been thwarted—mainly by a skillful clique of men that centers around the U.S. Navy. After playing such an important role in World War II, the tradition-laden Navy is deathly afraid they will be overpowered under full unification and loose control of the Marines and Navy air groups.

Former head of the Joint Chiefs, Admiral Radford, was an outspoken foe of unification, and current attempts to block unification are being aided by powerful lobbyists including the Navy League, a pressure group of retired naval officers and businessmen, and by a group of powerful pro-Navy Congressmen on key committees.

Back in June 1941, a proposal to unify the services because of impending war was vigorously opposed by the Navy. In 1944, the Richardson Committee recommended one Defense Department with a general staff and a single commander, but it was vetoed by Admiral King, then Joint Chief of Staff, despite support by the Army and Air Corps. Since then, the Navy stand on unification has not varied.

There have been a series of paper reforms drafted since World War II, which have actually delayed effective unification. In 1956, the Military Air Transport Service was ordered to become the central transport group for all services. But today, the Navy, SAC, and others still run their own transport planes.

In 1958, Congress—at the President's request—passed the Defense Reorganization Act which reshuffled some of the Pentagon chain of command and further entrenched the Joint Chiefs. During 1959, when the act was supposed to reduce interservice squabbles, fights like the Bomarc-Hercules tiff ranged louder than ever before. These have undoubtedly been honest attempts to improve the situation, but I believe time has shown that patchwork reforms only further delay the creation of a unified Armed Forces.

Eliminating the Army and Navy—gallant services that have existed since the founding of the Republic—is not a trivial task. But replacing them, and the Air Force, with a single modern integrated fighting force—stronger and larger and richer at its very birth than its combined predecessors—may well be the one stroke of action that will insure our Nation's survival.

Dry Potomac Forecast Unless Dams Are Built

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I would like to call attention to a recent news story in the Evening Star. It concerns the important study now underway by the Corps of Engineers regarding development of the Potomac to meet growing needs in metropolitan Washington and the surrounding area:

[From the Evening Star, Mar. 23, 1960]

DRY POTOMAC FORECAST UNLESS DAMS ARE BUILT

A Potomac River bone dry at Chain Bridge and a miasmal salt-water swamp at Hains Point within 15 years was envisioned yesterday by the Army Engineers' top water expert for the middle Atlantic seaboard.

Brig. Gen. Thomas H. Lipscomb painted the ugly picture in a talk before some 100 delegates attending a session of the Potomac River Development Association at the Willard Hotel.

He bolstered his dire prediction with charts based on years of study of the Potomac River Basin and predicted population growth in the Metropolitan Washington area.

However, he said the situation could be avoided by construction of 2 dams in the Great Falls area and 10 others in the upper regions of the stream at a total cost of \$230 million. The project would take care of basin water supply and pollution needs until the year 2010, he declared.

EXTRA FACILITIES

An extra \$70 million will be needed if recreation and flood control facilities are to be included, General Lipscomb said.

General Lipscomb heads the Army Engineers North Atlantic division. The section embraces streams and water supply for the vast population complex strung along the coast from Connecticut to Norfolk, Va.

The military engineer said the metro area now contains about 2,100,000 persons. At the present time rate of growth this figure will be 3 million by 1975. When that day arrives the populace will be consuming water as fast as it flows into the two dams now serving the city and surrounding suburbs.

The water intakes are located at Great Falls and Little Falls, just above Chain Bridge.

PERIODS OF NO FLOW

General Lipscomb further explained that during dry summer months, when the river is at its lowest and demands are greatest, no excess water will flow over the dam crests.

Consequently, from Chain Bridge to Little Falls the river would be bone dry. Below the bridge the river would be filled with tidal water from Chesapeake Bay. Bay tides he said, reach only to Chain Bridge.

This would leave the river from Washington's waterfront to the bay nothing but a salt water marsh loaded with effluvia that would float in with the morning tide and out again at night.

The dire water situation, the Army officer declared, has been brought about by a "phenomenal population growth." It ran contrary to all predictions by census experts made in the 1940's when the Corps of Engi-

neers undertook to study water needs for the area.

NEW STUDY UNDERWAY

The unexpected increase has caused Congress to order a new survey that is currently being undertaken by his office. It will be completed within a "year or two," General Lipscomb said.

So far, the Army engineer stated, his survey probed the following solutions:

1. Erection of two dams above Great Falls to meet only the needs of the metro area at an estimated cost of \$120 million.

2. Construction of a total of 12 dams including the two above Great Falls costing \$230 million. These would take care of the entire Potomac Basin water storage and pollution needs.

3. Expenditure of an extra \$167 million to include recreational facilities and flood control, much of it for dikes in the vicinity of Washington's river front.

4. Tapping of groundwater sources. This would cost \$140 million; would meet only a fraction of projected needs and would not provide for pollution abatement.

5. Desalting water taken from Chesapeake Bay. While possible, it would cost in excess of \$2 billion; would not provide for pollution abatement and would set the wholesale price of water at 10 to 20 times that drawn from reservoirs.

The Late Honorable Russell V. Mack

SPEECH

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. DAGUE. Mr. Speaker, we stand with bowed heads in the presence of the Divine intervention which has taken from our midst a dedicated public servant and a stalwart friend in the person of RUSSELL MACK.

To have known RUSSELL MACK was to have enjoyed the rare privilege of his genial personality and the wealth of his years of experience in the field of public relations. To have served with him as a legislator was to have observed his conservative approach to the problems of the day and to have particularly noted the fine distinction he made between those areas that are best served by the Federal Government and the States, respectively.

RUSSELL MACK was a staunch defender of our American way of life and a prime advocate of States' rights. His continuing concern was always related to preserving the dignity of the United States within the commonwealth of nations and within that framework to see that the Congress remained truly the voice of the people.

We shall greatly miss this stalwart defender of freedom and truth and our heartfelt sympathy goes out to those who are left to mourn his untimely passing. May our heavenly Protector wrap these bereaved ones in the mantle of His divine care and may they be assured that their beloved now rests on a sunnier shore, there to greet them when they too have crossed over.

U.N. Supervision of South Korean Elections: Fact or Farce?

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. UDALL. Mr. Speaker, in recent weeks, I have placed in the CONGRESSIONAL RECORD various letters, articles, and editorials describing acts of corruption and brutality that have brought Syngman Rhee's South Korean regime into disrepute.

Prompted by news reports of these statements, numerous Americans in Korea have written me detailed, thoughtful letters chronicling deplorable conditions there. This morning's mail included a long letter telling of a bridge that was paid for but never built, factories constructed but not opened, public projects operated for private gain, and other abuses of our aid.

The writer, who has reliable credentials, states flatly that our poorly supervised aid program is utilized by dishonest Korean officials to maintain their power. He points out that because our aid is misused the average Korean is coming to view Americans with mixed—or even hostile—emotions.

Also, after describing election-eve violence, the writer, who for obvious reasons must have the protection of anonymity, provided some penetrating views on the much-publicized supervision of recent Korean elections by United Nations inspection teams. Since Rhee and his supporters so often point to this U.N. supervision as a reply to their critics, this description of the U.N.'s role is telling indeed.

An excerpt describing U.N. activities is reprinted below, together with an editorial from the March 17 issue of the Washington Post and an article from the March 28 edition of Time magazine—all this material emphasizes the farcical nature of Rhee-controlled South Korean elections.

[From a U.N. report]

The Government propaganda sheet boasts that every vote here is U.N. supervised. The U.N. actually sent around five teams of two men each to cover the whole country in a whirlwind 1-week tour. For example they whizzed into this town in a jeep. Called upon the chief of police and the gun-su (county manager) and the Government chairman of the election committee. Through an interpreter, they received assurances that the elections would be free, etc., and then hopping into their jeep they sped to the next large town 30 miles distant to perpetrate the same farce. Of course, as one U.N. official admitted, they are really in a dilemma here. Unlike the diplomatic missions here, whose reports to their respective governments on the recent elections here will remain secret documents, the U.N. must file a report which they know will be made public in the U.N. General Assembly. If they tell the truth about the terrorized atmosphere and the fraudulent way in which the so-called free elections were conducted, then this report will be of great propaganda

value to the Communist bloc in the U.N. that in this showpiece of U.N. sponsored democracy we have a totalitarian system that differs but little, if at all, from the systems condemned by the U.N. But if on the other hand, the U.N. mission here, submits a report innocuous enough not to be of major propaganda value to the Communist bloc, then it must of necessity suppress and distort the true state of affairs. The proper thing to do would be: not to go through the pretense of observing the election, avoid the semblance of honesty to the travesty, and consequently submit no report.

[From the Washington Post, Mar. 17, 1960]

TAINTED VICTORY

With a certainty as predictable as an eclipse of the sun, President Syngman Rhee's forces in Korea have bulldozed another election victory. The amount of coercion, intimidation, and repression would be incredible if it were not attested by foreign observers. Beatings leading to murder, police "persuasion," plans for translucent ballots and box stuffing, the grossest discrimination in law enforcement—all figured in the reelection of Dr. Rhee and the election of his Liberal running mate, Lee Ki-poong.

The lead pipe procedures are the more remarkable because the disorganization of the opposition Democratic Party had given the Liberals an insurmountable advantage. Dr. Rhee had no direct opponent because of the death of the Democratic presidential nominee, and the major Liberal efforts were concentrated on unseating the present Democratic Vice President, John M. Chang, who fought an extraordinarily courageous contest. A London Times correspondent wrote the other day that Dr. Chang "would be almost certain to win if the elections were held in the same comparatively free atmosphere as the 1958 parliamentary election."

It is sometimes asked why Korea should be held up to censure when there are other authoritarian States in Asia. The answer is that the free world should expect more of Korea. The Republic was launched as a United Nations ward, and thousands of Americans and other soldiers shed their blood to preserve it. Korea is relatively more sophisticated than other new countries; it has developed a loyal opposition, an independent press and a widespread desire for fair and honest elections. But the sad fact is that under Dr. Rhee's inordinate demand for power the country has retrogressed markedly in political freedoms from the situation 2 or 4 years ago.

All of this becomes of direct interest to the United States because American aid has been used by the government to strengthen its political hold. The State Department raised a timid admonitory finger in public about violence on the eve of the election with no discernible effect because the dirty work had already been done. Korean political choices are the business of the Korean people, but the situation suggests the need for a much more critical look at the way in which American aid may be used to defeat the objective of representative government.

[From Time Magazine, Mar. 28, 1960]

SOUTH KOREA—VICTORIOUS METHODS

Unopposed, 84-year-old Syngman Rhee won a sweeping fourth-term victory—even though perhaps 10 percent of the voters cast their ballots for his only opponent, who had died a month before.

But there still had to be a get-out-the-vote campaign to elect Rhee's running mate, ailing Lee Ki Poong, who has difficulty walking and speaking because of a nervous disorder, and did not make a single campaign speech. So Rhee's liberals set to work. Election day brought many complaints of voter

intimidation and open ballot fixing, of 6-foot-high boards outside some polling places showing voters how to mark their ballots for Rhee and Lee. Green-shirted members of Rhee's Anti-Communist Youth League lounged outside the booths as voters arrived, often in organized teams of three (so that the man in the middle could make sure that the other two voted correctly). The result was a decisive victory (76 percent) for Invalid Lee over U.S.-educated (Manhattan College) John M. Chang, who had beaten Lee easily in the last election.

Tension ran high in many areas, and in the normally peaceful town of Masan voting was still in progress when a disgruntled crowd raised the cry, "Dirty polls!" It was like a spark in dry straw. Suddenly, 200 angry citizens raced to a police station, set it afire, fled with captured weapons. Another mob, 2,500 strong, gathered before the town hall, stoned firemen, who vainly attempted to hook up their hoses to fight back. After tear gas failed, scores of police arrived from nearby Pusan. One lowered his carbine and fired into the screaming crowd, a signal that led other cops to do the same. When it was all over, at least 10 were dead, some of them schoolchildren, scores were wounded, and hundreds were pushed into police vans and hauled off to jail.

Outmaneuvered at the polls, the opposition Democrats stomped out en masse when the National Assembly met to hear the formal election results, and darkly talked of challenging the act of theft in court. But in Syngman Rhee's Korea they cannot hope to do any better in the courts.

The Late Honorable Russell V. Mack

SPEECH
OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. DOOLEY. Mr. Speaker, the passing of RUSSELL V. MACK, the distinguished Representative from Washington, who came to the Congress 12 years ago, was a sad event for all who knew him.

It was my privilege to serve with him on the Public Works Committee of the House. His knowledge of committee affairs, combined with his amicable approach to all problems before that body, made him an invaluable asset. The effectiveness of his work and the benefits of his judgment helped motivate much of the legislation for which the Public Works Committee was largely responsible.

Russ Mack, besides being a remarkably fine Member of the Congress, informed, articulate and persuasive, was to me a cherished friend.

Broad in his outlook, generous in his sentiments, and possessed of a gentle kindness, it was a pleasure to be in his company.

Mrs. Dooley and I spent many hours and days with Russ Mack and his charming wife, and those days shall ever be remembered.

We share her grief in RUSSELL's untimely death. The Congress and the country have lost a rare man.

Committee Endorses Provisions of H.R. 4700

EXTENSION OF REMARKS OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. FORAND. Mr. Speaker, the following is a portion of the report submitted by the Subcommittee on Problems of the Aged and Aging to the Committee on Labor and Public Welfare, U.S. Senate.

The committee toured the width and breadth of the country conducting local hearings in seven cities, and visited nursing homes, hospitals, homes for the aged, and various types of living arrangements for the elderly.

The following is that committee's recommendation on financing the provision of health services:

THE AGED AND AGING IN THE UNITED STATES: A NATIONAL PROBLEM—SUMMARY AND RECOMMENDATIONS

The pages that follow describe in considerable detail one of the most dramatic stories—and challenges—of 20th century America. This is the story of the men and women who, having reached and passed the age of 65, find themselves arbitrarily classed as "aged." Today, they number approximately 16 million persons, or 9 percent of the population. But they are not the only participants in this story. There are the millions whom we call "aging" and other millions who have aged parents and close relatives. In short, this is a story of all America.

The challenge is how America will act to meet the problems that the process of aging and our modern civilization create. The problems are many, and they, too, reach out and touch all Americans. There is the young couple with aged parents to support; the middle aged who find employment opportunities closing to them; those about to step over the threshold into the strange and uneasy world of retirement; and the aged themselves who, having reached the alleged "golden years," find them a badly tarnished imitation.

It is no longer possible, as it once may have been expedient, to ignore or shrug off these problems and the urgent need to solve them. The 16 million Americans who are over 65 will become 20 million just 15 years from now. Additionally, the life expectancy beyond age 65 is increasing. Obviously, this is not a trend that will halt or reverse itself. America, in fact, is faced with a new "population explosion" at the other end of life's cycle.

The responsibility of seeking solutions to the many problems that are inherent in this population explosion is not one that can be handily assigned. It is no more the sole responsibility of the Federal Government than it is of the town where an aged person happens to reside. Rather, the challenging task is a matter of joint responsibility, utilizing all levels of government, private organizations, and individuals. Only through this partnership approach can we hope, in time, to solve the problems of aging.

The Subcommittee on Problems of the Aged and Aging was established by the Senate Committee on Labor and Public Welfare with the assignment to conduct a complete study of the problems and needs of the aging, the programs of various agencies in meeting their needs, and the extent to which additional Federal programs should be undertaken to

help solve the problems of America's senior citizens. In carrying out this assignment, the subcommittee felt it had an additional duty of helping to focus national attention on these problems and, to arouse national interest in solving them.

It was self-evident that the major problems of the aged and aging fall generally into such broad categories as financial, medical, housing, employment, and meaningful use of leisure time. Yet, even knowing the scope of the problems in a general way hardly prepared the subcommittee for the gigantic, complex range of problems and their intricate relation to one another that would be uncovered.

For 8 months, the subcommittee served as a collection agency for information, as an investigator of conditions, as a sounding board for ideas and recommendations, and frequently as a sort of father confessor to the aged themselves. The subcommittee conducted hearings in Washington and in seven cities across the Nation. It gathered testimony from the experts, public officials, organizations, and individuals. At its field hearings, the subcommittee instituted the "town meeting" where elderly Americans were given the opportunity to personally relate their problems, their hopes, and their fears. Visits were made to older people in nursing homes, housing projects, senior centers, homes for the aged, and retirement hotels.

It was, overall, an enlightening experience and a sobering and humbling one when the magnitude of the problems emerged. Perhaps the greatest difficulty of the subcommittee following completion of its survey was in attempting to isolate the problems and assign them recommendations and priorities for action. Thus, recognizing the limitations of even its own intensive study, the subcommittee herewith presents a summary of the major problems of the aged and aging, and its recommendations for priority action.

RECOMMENDATIONS

I. Financing the provision of health services

The No. 1 problem of America's senior citizens is how to meet the costs of health care at a time when income is lowest and potential or actual disability at its highest. Its solution should have top priority for legislative consideration in 1960.

The record of the subcommittee is replete with poignant and often tragic testimony from local officials and from senior citizens themselves, on their concern for medical, hospital, and drug bills which either cannot be met out of income, or would wipe out small savings or other liquid assets. Many older persons testified that they could manage to live respectably on their modest incomes if they could eliminate the impact of heavy health costs.

Recent increases in the numbers of the aged with commercial and nonprofit insurance have been marked, but the Department of Health, Education, and Welfare has pointed out that by 1965 at least 8 million aged persons will not have any type of health insurance—including 2 million who will receive their medical care under a means test through old-age assistance.

1. As its first recommendation for action in 1960, the subcommittee recommends that legislation be enacted to expand the system of old-age, survivors, and disability insurance to include health service benefits for all persons eligible for OASDI.

Such a solution to the problem of financing health service costs, takes account of the following crucial points:

First, it would meet the financial requirements of as many of those at present retired as possible, without reducing them to a pauperized state.

Second, it takes into account the fact that practically the entire younger and middle generations are now covered by OASDI; they too will one day reach retirement age and will expect to be adequately covered by health insurance. Small premium payments during their working lives can provide paid-up health insurance on retirement.

Third, the use of the social security system for retirement income is a well-established American principle and now covers almost 10 million aged beneficiaries. Its extension to include the financing of medical care for older persons would be relatively inexpensive to administer.

In the administration of the program consideration may be given to the employment of private, nonprofit health insurance groups and to cooperative arrangements with State and local health and welfare agencies.

The benefits to be considered under such a system of financing should include diagnostic and preventive health services, treatment for acute and chronic illness, and rehabilitative services.

The prevention of illness, its early diagnosis, and a restoration to health are the primary goals of an adequate health service. Diagnostic services and home care programs under supervision can be effective in reducing the high cost of hospitalization and institutionalization. A new, emphatic approach to organized home care services, particularly for chronic illnesses and for preventive efforts may reverse the rapidly rising costs of hospitalization as well as improve the health of America's older citizens.

Honorary Degree Presented to Congressman Mike Kirwan

SPEECH

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. FLOOD. Mr. Speaker, it gives me a great deal of personal pleasure to warmly congratulate our distinguished colleague from Ohio, the Honorable MICHAEL JOSEPH KIRWAN, upon his receiving the honorary degree of Doctor of Humane Letters from Oklahoma City University.

Though MIKE has served well the 19th district of Ohio since the 75th Congress, some 24 years, I am sure, Mr. Speaker, that our colleagues would be very much interested in learning that MIKE was born and raised in my congressional district, the 11th Pennsylvania, and we hold MIKE in great esteem and respect for the fine career which he made in the halls of Congress.

In my district we consider MIKE KIRWAN as one of our own and we are delighted that he has received this distinction from Oklahoma City University. Moreover, that university should be congratulated for its wise selection of candidates to whom it awards such degrees.

I am sure, Mr. Speaker, you and the Members of this body join me in these remarks to our colleague from the Buckeye State.

American Housing and America's Growth

EXTENSION OF REMARKS OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. ADDONIZIO. Mr. Speaker, recently the National Housing Conference, at its annual meeting here, directed considerable attention to the pressing need for more housing for the moderate income family. A careful analysis of future housing needs of the whole Nation was offered by Mr. Boris Shishkin, secretary of the housing committee of the AFL-CIO, and I think this address will prove most interesting to my colleagues.

Following is Mr. Shishkin's address to the National Housing Conference on March 14:

AMERICAN HOUSING AND AMERICA'S GROWTH (By Boris Shishkin)

Our country is growing and growing fast. Most Americans want it to grow. They don't want this growth to be achieved through a series of ups and downs. They don't want economic expansion through a succession of booms and busts. What they want, what they strive for and what they insist on, is steady and stable growth.

Americans want growth in which the rise in population is matched by a rise in the standard of living of the people. To them, economic expansion means better communities, more and better schools, more and better health services and, above all, more and better homes.

The need for housing is the central, the most fundamental fact of our economic life. Making this need known to the general public, putting into focus for legislative guidance of our statesmen, our elected representatives, is our responsibility, the responsibility of housers brought together here under the banner of the National Housing Conference.

To be sure, housing is a technical subject. It is technical from the point of view of economics, social requirements, financing and even statistics. Too often even we housers get so wrapped up in the technical details of housing that we forget the real basic concepts underlying our whole approach to the problem.

Too often we forget that when we talk about title I or section 213, the very people we are trying to reach and whose support we must have, haven't the faintest idea of what we are talking about. So, let us stick to fundamentals. The most important fundamental of our national housing policy is the need for housing.

For it is the need for housing, not abstract projections, not vague aspirations, but the real and measurable housing need, that must determine the types of action our civic leaders and our statesmen will have to take, if the economic growth we seek is to be achieved and sustained.

Everybody is talking about economic growth, but not enough people are doing anything about it. And even fewer, among those who are in a position to do so, are taking timely action to make sure that our economy continues to expand, and that it expands not by fits and starts, but at a steady pace.

If, up to now, we as a nation, have failed to take actions necessary to provide for the

kind of a future that we look for, it is not because we don't know enough.

We know how fast our population is growing. A glance at the population clock at the Bureau of the Census in Washington, will tell us that, every minute, there are eight additions to the American family right now. The net increase in population currently is 8,000 per day.

We know also that, in order to meet the national housing need in the years immediately ahead, we must build at least 2.3 million new homes a year. If the need is to be met, between now and 1975 we must build at least 35 million new homes.

This solid, rockbottom, estimate of America's future housing need is based on hard facts.

It is a fact that, right now, some 15 million American families live in houses which do not meet the minimum standards for family living. These families live in substandard homes now.

We know also that, in addition, about 7.5 million families are living in houses which are suitable now, but will deteriorate by 1975.

This means that, by 1975, better housing will have to be provided for 22.5 million families occupying substandard housing. Only about 5 million of these houses can be fixed up to provide livable accommodations. And at least 17.5 million will have to be replaced by new construction.

In addition, 2 million dwellings which are not substandard will be removed from the housing supply by fire, storm and other forms of disaster, or by demolition to make way for highways, cloverleaf approaches, schools, office and commercial buildings and other types of nonresidential construction.

The fact, then, is that, by 1975, about 19.5 million units now occupied or to be occupied during the next 15 years will have to be replaced.

But still, this would not provide a single house for the new families we will have by 1975. And by 1975 we will have 14.5 million new families to house.

More than that, by 1975, an additional million units will be needed to provide separate accommodations for families now forced to double up with other families.

Add up these figures and you will find that, between now and 1975, we must provide at least 35 million housing units, or at least 2.3 million new units a year.

These are our housing needs over the next 15 years.

We express these needs in statistical terms, but again, we should not let the statistics obscure what these bare figures stand for.

When we talk about the need for a given number of housing units, we are really talking about the need for that many good American homes. We are talking about the American home—the most important physical factor in the lives of American families. What we are talking about is whether the people concerned will have an opportunity for a rewarding family life, or whether for them family life, as we in America like to think about it, is pretty well licked from the start.

We are talking about whether the kids will have good places to grow up in, to play and study and to find it good to be with the rest of the family, or whether their whole outlook on society will be warped and stunted right from the start. It is these things that our statistics stand for.

Let me say a word about these housing statistics. It is a shocking state of affairs that our Government feels no responsibility to determine America's housing needs.

This is a major dereliction on the part of our national Housing Administration.

Because of this dereliction on the part of our Government, we in the AFL-CIO have

twice within the past decade prepared our own estimates of the Nation's housing requirements.

Let me say that these are firm, sound estimates, based on unassailable analysis of all available facts. They were prepared under the direction of the Nation's leading housing economist, Bert R. Seidman.

In 1953, we found a need for building at least 2 million units a year. As we all know, the actual record has fallen far short of this level. That is why, when we recently revised our estimates, we determined our minimum need to be for 2.3 million new houses a year.

This need is for almost a million more housing units annually than the actual construction rate maintained in recent years. This means that approximately 35 million new homes must be built between now and 1975, if the national housing need is to be nearly met.

To recap, let me note at this point how the figures add up to this total. To replace the existing substandard housing, we need 15 million units. To replace housing becoming substandard between 1960 and 1975, we need 7½ million units. This gives us the total need for providing good housing in place of bad housing, of 22½ million units. We estimate that, of this total, 5 million units can be brought up to the minimum standard of livability through rehabilitation. This, in turn, leaves a total of 17½ million substandard units to be replaced with new housing construction.

In addition to these 17½ million units, 2 million dwellings which are not substandard will be lost due to fire, storm and other disasters, and will have to be replaced with new housing. This brings the total replacement need for 1960-75 to 19½ million units.

Beyond all this necessary replacement, we must provide 14½ million new units to take care of the increase in the number of families between 1960 and 1975. But, in addition, we must provide another 1 million units to undouble the doubled up families and thus assure to every family privacy in its home.

This gives the total need for new housing construction between 1960 and 1975 of 35 million units. And it means that, between now and 1975, average annual volume of housing construction will have to be maintained at 2,300,000 units.

How are we going to build 35 million homes by 1975? We can do so only if we begin to build far more houses for low- and moderate-income families than we have been building.

The trouble with FHA and other existing housing programs is that they serve primarily the upper income groups, the groups whose housing requirements have already been best satisfied.

Let me cite just one set of figures. In 1958, the latest year for which data are available, it took about a \$9,000 yearly income for a family to buy a new FHA house without committing more than 20 percent of the family income to the housing expense.

We know that, in 1950, substantially less than 20 percent of families had incomes as high as \$9,000. And we know that in 1958, close to 12 million multiple-person families, coming to more than a quarter of all multiple-person families, had annual incomes below \$4,000. In 1958 also, about 3½ million multiple-person American families, or about 8 percent of the total, had annual incomes below \$2,000.

And, while we are at it, let us take a look at how the unattached individuals were faring in 1958—I mean the bachelors, the old maids, the widows and the widowers. Of the 10 million unattached individuals in 1958, more than three-fifths had annual incomes below \$3,000. About two-fifths were below \$2,000, and nearly one-fifth had incomes below \$1,000 a year.

It is clear that virtually all low-income families and most moderate income families are priced out of today's housing market.

And it is clear, also, that if modern America is to achieve balanced growth, this critical imbalance in our Nation's housing supply will have to be decisively corrected.

How can this urgent, insistent problem be best solved?

Despite all the charges that have been leveled at the public housing program the truth is that it is still the only effective way that ever has been devised to give low-income families a chance to obtain good, decent homes. Undoubtedly improvements in this program can and should be made. In many places improvements are, in fact, being made in this locally initiated and locally based program.

But the basic idea is as sound today as it was 23 years ago, when Congress first authorized the public housing program.

And today, as in the years ahead, publicly assisted housing, serving the housing needs of low-income families, is, and must continue to be the cornerstone of America's national housing policy.

Yet, it is increasingly clear that if the total housing need is to be met, and if our country's economic growth is to be sustained, we must also develop a new approach to deal effectively with the central problem of this generation—how to bring good housing within the financial reach of the average American family.

I am speaking of the need for availability of moderate-priced housing to the moderate-income families.

Of course, what level of income constitutes "moderate income," or, as some call it, "middle income," will vary from one area to another. What is more, not everyone is in agreement on the precise range of incomes to be included in this grouping.

What I have in mind primarily, is families who, in average cities, have incomes in the general range of between \$4,000 and \$7,000 a year. In most cities, as the annual survey of the National Housing Conference has shown so well, there are very few homes that these families can buy or rent without overextending their family budgets.

Yet, if financial charges and rents could be reduced to reasonable levels, many more moderate-income families could obtain good homes within their means without subsidy.

Unfortunately, the administration, to reinforce its overall tight money policy, has been raising residential financial charges higher and higher. The result is that more and more potential homebuyers of moderate means are being priced out of the market. Instead of sustaining economic growth, this wrong-headed policy is producing an artificially tight housing market and artificially forcing an economic slump.

Consider the person who gets a typical \$12,000 mortgage this year, at the current 5.57-percent rate (plus ½-percent insurance charges). His mortgage will cost \$3,204 more over its total life than if 1952 FHA rates still prevailed. The cost is up \$1,620 over 1957 just in added interest charges during the life of the mortgage.

Or, take a typical conventional mortgage, at the present average amount of \$14,000. Because of the jacked-up interest rates now in effect, this year's average conventional mortgage will cost \$1,876 more in its 20-year life than the same \$14,000 mortgage cost 7 years ago.

Taken together, the higher cost of interest with which the homebuyer has been saddled, will amount to hundreds of thousands of dollars just in extra interest payments this year alone. Several billions of dollars will be spent by homebuyers for extra interest before these mortgages are fully paid.

It is noteworthy that the cost-conscious administration has been silent regarding this heavy and extravagant cost.

But, actually, this is not the whole story. To secure funds in today's money market, FHA mortgages must be discounted from 2 to 7 percent, the average running about 3.6 percent at the end of 1959. This discount, of course, is passed on to the ultimate consumer. On the typical FHA mortgage, this discount will have the effect of adding \$457 to the cost of the house. To pay off this added cost at 5 percent, plus premium, will require \$35 a year over the life of the mortgage.

All told, the present tight money policy has had the effect of increasing the annual payments on a typical new home by \$175 per year over the 27.3-year life of the mortgage, or an aggregate increase of \$4,777.

On the basis of the generally accepted rule that the annual housing expense prudently requires an annual income five times the expense, we must conclude that the increase of \$175 a year in annual mortgage payments requires a family income \$875 greater than would be necessary at the previous lower interest levels.

In the distribution of family incomes for 1958, this difference of \$875 corresponds to an 11-percent population group, or about 5.3 million families. This means that the present tight money policy excludes from the market for new housing some 5.3 million families who could be served if former interest levels were restored.

What can be done to reverse this trend, inimical to America's economic growth, and threatening its prosperity?

First, our national policy objective, must be reversed. Instead of deliberately and artificially pushing the average American family out of the housing market, the national housing policy should be to bring the American family of moderate income into the housing market, by making housing available to it on more reasonable terms.

Monthly financial charges can be reduced by lowering the interest rate, by extending the repayment period or both.

Suppose a family wants to buy a \$14,000 house with a \$2,000 down payment? It would then have to pay off a \$12,000 mortgage.

If the mortgage terms are 6 1/2 percent interest payable over 30 years, the current best available terms for FHA-insured mortgages, the monthly financial charges (excluding other housing expenses, such as taxes, maintenance, etc.) will be \$73.89. This figure does not include the additional cost of the discount on the FHA mortgage, which the purchaser does not usually even know about, but which he pays, nevertheless. The same mortgage at 3 percent, repaid over a 50 year period, and also figured without discount, requires a monthly payment of only \$38.84.

High level housing activity, assuring construction of at least 2.3 million dwellings a year should be the recognized goal of the national housing policy.

As stated in the housing resolution of the 3d constitutional convention of the AFL-CIO, unanimously adopted last September:

"Achievement of this objective will require a fundamental redirection of national housing programs to assure that the major share of the new homes constructed is made available within the means of ordinary American families who are priced out of today's private housing market."

The AFL-CIO has advocated the enactment of a sound housing program for moderate income families, a program without any direct subsidies, since 1950. There has been a succession of good middle-income housing bills introduced in Congress since that time.

Notable in this succession of proposals were the Lehman bill of 1956, and the sub-

sequent bills introduced by Senators CLARK and JAVITS. Other approaches to the problem were made in the bills offered by Congressman RAINS and Senator SPARKMAN.

We in the AFL-CIO are not wedded to a particular formula. The important thing, as we see it, is to reduce the financial charges so that average American families can obtain good homes on reasonable terms. This can and must be done.

Let us get enacted a sound and positive program to bring good homes within the financial reach of the American family of moderate means. Let us make this a major objective in our drive for the enactment of a comprehensive housing law in 1960. Only by attaining this objective can we advance toward our goal of a good home for every American family.

Labor looks to NHC and the friends of NHC as its staunchest allies, determined to win not only this crucial battle for better housing, but also to win the larger prize of sustained economic growth that will bring better living conditions to all Americans in the years to come.

Mailbag

EXTENSION OF REMARKS

OF

HON. HOMER THORNBERRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. THORNBERRY. Mr. Speaker, on March 28, 1960, in the Austin (Tex.) American, on the editorial page under the title of "Mail Bag" there appeared an excellent editorial concerning the letters which Members of Congress receive from their constituents back home. The editorial emphasizes that letters from our constituents are not to be discouraged but emphasizes that a Congressman still has to do his own thinking.

Because I know that the Members of Congress will be interested in seeing the editorial, under unanimous consent I ask that it be included with my remarks. The editorial is as follows:

MAILBAG

There is a slighlight on what the people are thinking, or at least what they are thinking about, in reports from Congressmen on the trend of the letters they get from constituents back home.

A reporter's sampling, which included some of the Texas Congressmen along with those of other States, brought out the fact that the mail from home has been little concerned with the House and Senate wrangles on civil rights, or with the debate about the Nation's defense status.

But when the Forand bill for Federal medical care of the aged, and the Democratic package bill for additional Federal benefits for the aged, came up, there was a deluge of mail on the Members' desks. Naturally it was divided in support of both sides of the issue. If a Congressman reads all his home-district mail on the subject, he will be able to come up with the firm conviction that some of them want either or any of the Federal aid proposals and others don't want any of them.

The controversial issue of the Air Force manual, which was withdrawn which asserted that Communist influences had infiltrated some segments of the Protestant church was naturally the source of a deluge of mail. It was found that the greater vol-

ume of these letters from citizens had gone to the Defense Department, but Congressmen still were nearly swamped as a by-product of the controversy. Many of the comments, it was said, urged that an investigation by some impartial tribunal, be made into the substances of the charges. This idea was advanced by people who resented the charge and wanted to see it disproven on the record, as well as by those who simply wanted to know the answer, and of course by some whose opinions were in line with the accusations.

People always are being urged to write your Congressman; and it is not to be discouraged. But we imagine that with the diversity of views he gets, a Congressman still has to do his own thinking; and we're sure he finds that in many cases, other than sudden emotional issues, he finds most of the letters come from organized and self-interested groups.

Resolution in Opposition to Forand Bill

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the CONGRESSIONAL RECORD a resolution adopted by the Women's Auxiliary to the Michigan State Medical Society, in opposition to the Forand bill. I am the sponsor of identical legislation. The Women's Auxiliary to the Michigan State Medical Society has joined the insurance companies, the National Association of Manufacturers, the chamber of commerce, the American Medical Association, and the organized undertakers in opposition to this desperately needed humanitarian legislation.

The resolution follows:

Whereas social security cash benefits now go to 13.7 million;

Whereas private pension plans, increasing savings, and liquid assets are all combining to improve the economic resources and the purchasing power of the group over 65 years of age;

Whereas many positive-action programs, including improved nursing homes, home-care services and homemaker services are being advanced;

Whereas the boards of the American Medical Association and the American Hospital Association recently adopted a resolution dedicating their full resources to accelerate the development of adequately financed health care programs for needy persons, especially the aged needy;

Whereas any plan which benefits a selected group, social security beneficiaries, to the exclusion of other equally or more needy citizens, at the expense of the taxpayer is discriminatory;

Whereas medical-care programs for indigent citizens, especially those over 65 years, are improving;

Whereas proof of need does not require Federal action, nor does Federal action promise to resolve the problem;

Whereas need cannot be proven until the findings of the White House Conference on Aging in 1961 are known and studied;

Whereas adoption of a plan for Federal control and payment of medical care for our

citizens would hinder the progress of medical science, kill voluntary health insurance and force our really ill citizens to compete for hospital space against malingers. Therefore be it

Resolved, by the Woman's Auxiliary to the Michigan State Medical Society on this 10th day of March 1960, That the Forand bill must be labeled (1) unwise, (2) discriminatory, (3) burdensome, and (4) failing its stated purpose; and further

Resolved, That the Woman's Auxiliary to the Michigan State Medical Society is unalterably opposed to any legislation which makes a governmental body responsible for the medical needs or expenses of U.S. citizens or any subdivision of its citizens.

Constituent Calls Economic Depression Republican Prosperity

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. ROOSEVELT. Mr. Speaker, I have recently received a letter from a constituent who tells of the economic plight of the communities of Mar Vista and Culver City, located in my district, which I sincerely hope is not an omen of harsher things to come, or an omen that the depressed areas of our Nation will continue to stagnate, without hope, because of opposition by this administration to depressed areas legislation.

We have heard many of our colleagues speak on the House floor of the depressed economic conditions in their States. We are particularly mindful of the fact that many regions have been on the depressed areas roll for a long time, a situation which the Eisenhower administration refuses to tackle head on.

While my State of California does not face the extreme problem, say, of West Virginia, the fact remains that there are noticeable pockets of economic depression.

My constituent's letter sets forth the situation with clarity. Her letter again proves that a vicious cycle is generated when a single family is hit by economic setbacks. The loss of income by one family affects the butcher, the baker, the candlestick maker. When this is multiplied within a community the results are obvious.

Mr. Speaker, the letter follows—a letter ending with this comment: "This is Republican prosperity."

Mrs. GEORGE J. SCHICK,

Los Angeles, Calif., March 21, 1960.

Hon. JAMES ROOSEVELT,
House Office Building,
Washington, D.C.

DEAR MR. ROOSEVELT: Being in the 26th district and a member of the Mar Vista Democratic Club, I feel a little more free to bring to your attention (and I am rather certain that you are already somewhat cognizant of the fact) that this area is in a very definite depression. The following is a rather personal example:

My husband is a general building contractor. He has had few calls and no con-

tracts for work since the first of February. Money is so tight and loans for this area seem to be unavailable for the remodeling which is his main kind of work. Consequently I am the only one bringing in any income. So we have retrenched to a nearly bare-cupboard. I let my weekly cleaning woman go. She depends very much on the \$10.30 which helps make the payments on the house she was forced to buy when her two eldest daughters went to work and she had to give up her home in the "Project" which was the only place where a family with 12 children could find room to live. I also let the little old "dally" go which was another \$10 a week of lost purchasing power. My gardener too, at \$30 a month plus the supplies he bought from the local nursery has lost out.

I was in a yardage shop on Saturday morning and the owner pointed out that in spite of the advertisement which he expected to bring in a goodly number of customers (Indianhead at 57 cents a yard—no profit) the store was doing no business and if it weren't for his wife's breadwinning ability, they wouldn't be eating. He told me that McMahon's Furniture Store manager said that if business didn't pick up, they would probably pull the store out of this district. Marketbasket Market said their grocery sales were down 17 percent. The locale of this series is Culver Center and at 11:30 on a beautiful Saturday morning, the sidewalks of the center were practically empty.

The layoffs at Hughes, Douglas, and Air Research have become very serious and advertisements for skilled technicians are now stressing "Not a Defense Plant."

This is Republican prosperity.

Very truly yours,

HELENE SCHICK.

Debunks American Medical Association Argument That the Forand Bill Pro- vides for Socialized Medicine

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. FORAND. Mr. Speaker, the AMA, which is spearheading the opposition to my bill H.R. 4700 has labeled it "socialized medicine." They use the term loosely, as appears in the printed hearing on this bill. I asked the AMA representative to give the Committee on Ways and Means the definition of the term "socialized medicine" as used by the AMA and he admitted they have never had a specific definition of the term.

Under leave to extend my remarks, I include an address delivered in New York a few days ago by Secretary-Treasurer William F. Schnitzler of the AFL-CIO, wherein he properly debunks the arguments of the American Medical Association.

In his address Mr. Schnitzler breaks down the AMA argument completely. His address follows:

This is, by scientific standards, the best and fittest audience I have ever faced. One of the basic laws of nature, according to the scientists, is the survival of the fittest. You have survived. You have lived through the

industrial revolution, through two World Wars, through epidemics and pestilence, through major and minor economic depressions and survived one of the most hectic spans in the history of mankind. Congratulations on having proved that you've got what it takes.

Fortunately, you share this distinction with many other Americans. The official records show there are more than 16 million men and women in this country who have reached and passed the age of 65.

Can they afford to be 65? That has become a national problem of growing dimensions. According to official estimates, there will be 20 million people over 65 by 1970 and 30 million by the end of the century. How can this army of working men and women, who have earned honorable retirement, live out their days in health, decency, and comfort? How can they be protected in their old age from the crushing costs of illness? That question forms the basis for our discussion here today.

First, let us examine a few fundamental facts. After a full year's investigation, a congressional committee headed by Senator PAT McNAMARA, of Michigan, submitted a report on the problems of the aged only 2 months ago which contained these shocking facts:

1. At least half of the aged, about 8 million people, cannot today afford decent housing, proper nutrition or adequate medical care, whether preventive or acute.
2. Three out of five people over 65 have an income of less than \$20 a week.
3. In 1959, two out of five aged families had liquid assets of less than \$200. Two out of three had less than \$2,000 that they could put their hands on to meet any emergencies or to cover daily living expenses.

It is difficult to believe that such conditions exist in modern America, but the facts are unchallengeable and must be faced if we hope to arrive at any effective solution for the health problems of the aged.

Undoubtedly, in many foreign countries conditions are much worse. What does that prove? Can that make us complacent about our own shortcomings? Every once in a while, explorers discover jungle tribes who kill their older people. They believe execution is kinder than to let the aging die a slow death from starvation and illness. How much more civilized are we in America than such barbarians?

Remember, it was only 25 years ago that we established social security in America. Before that, old folks without savings or family resources had to depend upon private charity or go to the poorhouse.

Nowadays, social security is universally accepted. It is hard to believe that anyone ever could have seriously objected to it. The social security program has accomplished so much good and has prevented so much needless suffering, that it has become an indispensable part of the American way of life. Yet tremendous opposition had to be overcome to get it started.

Yes, only 25 years ago, reactionary politicians and business leaders loudly denounced the very idea of social security as a menace to freedom. They condemned it as a "socialistic" dole. We were warned that it would destroy private initiative and bankrupt the insurance companies.

Experience has proved how baseless those dire predictions were. American business and the free enterprise system itself have been strengthened, rather than weakened. The insurance companies have grown and prospered beyond their wildest dreams, because more people became insurance conscious. And the American people as a whole are immeasurably better off as the result of the social security system.

You would think that this experience would convince even the most hard-bitten

reactionaries. But today they are once more in full cry. They have dragged out the same moth-eaten and ridiculous arguments all over again to oppose with undiminished bitterness proposals to extend the social security system into the vitally necessary field of health insurance for the aged.

We are not surprised that the National Association of Manufacturers and the Chamber of Commerce should take this position. They have been wrong on every issue affecting the well-being of the American people since the turn of the century. If these organizations of big business were on our side, we might have reason to suspect that perhaps we were off base. We are encouraged, rather than frightened, by their opposition.

But the thing that shocks and amazes every thinking citizen is how the American Medical Association can align itself with such allies against a plan which would enable millions of citizens to obtain medical care which they urgently need but cannot now afford.

Is the American Medical Association a proper and authorized spokesman for the doctors of this country who are dedicated to healing the sick? Or is it just another big business front, more interested in maintaining the status quo than in advancing the interests of doctors and their patients?

Today the American Medical Association is the one formidable enemy standing in the way of passage by Congress of the Forand bill.

The Forand bill, now being considered by the Ways and Means Committee of the House of Representatives, would provide an adequate system of medical, surgical, hospital, and nursing insurance for people who have retired under social security, now and in the future.

This plan is simple and practical. It has the full support of the trade union movement. It is likewise strongly endorsed by social agencies, by many eminent physicians, by leaders in our public life, and by progressive citizens everywhere.

Of course, the AMA calls it socialized medicine. It is nothing of the sort. The charge of socialism against the Forand bill is just as empty and meaningless and vicious as it was against social security 25 years ago.

The Forand bill would not put the Government in control of medicine. It would not in any way change the present structure of the medical profession. Doctors and hospitals would continue to practice just as they do today. Patients would be completely free to choose their own doctors. The only difference brought about by the Forand bill would be simply this—millions of elderly people would be able to get the medical treatment they need and the bills would be paid by an insurance system set up by the Federal Government.

"That's terrible," says the AMA. "That's socialized medicine. Private insurance groups should handle this."

Let's take that apart.

First, until a few years ago the AMA was denouncing private, nonprofit health insurance plans like the Blue Cross with equal fervor as socialized medicine. It was not until threatened with antitrust prosecution that the AMA reluctantly accepted any form of health insurance.

Second, organizations like the Blue Cross and the Blue Shield are the first to admit they cannot adequately meet the health insurance needs of the aged. Neither can commercial insurance companies. Both have the built-in disadvantage of relying upon current payments by the aged themselves to give them coverage. This makes the insurance far too costly. Because the risks are greater in age brackets over 65, the premiums must be raised beyond the reach of the people who need this insurance. Otherwise, the

protection is too limited to make the insurance worthwhile.

This is indisputable fact, not argument. It is attested to by every study that has been made of this subject. Let me quote an outstanding authority, Dr. Basil C. MacLean, who recently retired as president of the National Blue Cross Association, and who is also past president of the American Hospital Association. He says:

"A lifetime's experience has led me at last to conclude that the costs of the care of the aged cannot be met, unaided, by the mechanism of insurance or prepayment as they exist today. The aged simply cannot afford to buy from any of these the scope of care that is required, nor do the stern competitive realities permit any carrier, whether nonprofit or commercial, to provide benefits which are adequate at a price which is feasible for any but a small proportion of the aged."

There speaks a doctor who knows the score, a doctor who cannot be impeached by the American Medical Association or be intimidated by it. He heartily endorses the Forand bill as the only practical way to solve this problem.

The big advantage of the Forand bill is that it spreads the risk and thereby makes possible full coverage at low cost. This is the basic principle of any effective insurance program.

Of course, it will cost a great deal of money—about a billion dollars a year at the outset. This money would be provided by increasing social security taxes by one-quarter of 1 percent a year, or \$12 a year from insured workers and their employers.

"Unfair," cry the reactionaries. "You are making younger people pay for the oldsters." But when we ask them how else medical care can be provided for retired elderly people, they say "Let the children and grandchildren pay the bills."

That's just what we propose to do under the Forand bill, with this saving benefit—the people who will have to pay the taxes now will themselves become the beneficiaries of the insurance protection under this program when they reach retirement age.

We all know about the wonderful new discoveries of science in the field of medicine. With antibiotics, vaccines, X-rays, and new surgical techniques, the life expectancy of the average American citizen has been greatly expanded. In the foreseeable future, when the scientists find ways to prevent or cure cancer and heart disease, people will be able to live far beyond the Biblical span of three-score and ten.

But what good are these advances in the healing arts when they are priced beyond the reach of the great majority of retired workers?

Take the case of a retired couple who have saved some money during their working years and enjoy a modest income over and above their social security pensions. They plan for a reasonably comfortable and dignified old age. But if one or both become seriously ill, bills for doctors, hospitals, drugs, and appliances can add up in a relatively short time to thousands of dollars. Their whole foundation for retirement is swept away. For fear of such loss, many couples postpone seeking medical attention until too late, with tragic results.

It is true that doctors and hospitals provide free care for those who cannot afford to pay. To qualify for such care, however, the patient must go through a means test. If he owns a small house or a car or even a television set, he has to sell it, use the proceeds and take a pauper's oath before getting free care.

We all know of cases where elderly people, afflicted with serious illness, have literally killed themselves with worry over the burden the cost of their medical care was imposing upon their children or relatives.

The American Medical Association appears to have little concern with such human problems and certainly has suggested no way out. We sincerely believe there is a way out—the Forand bill.

It is more than 3 years now since the American Federation of Labor and Congress of Industrial Organizations began its pioneering crusade for this legislation. Progress at first was slow. But we are now rapidly gaining widespread support.

This, we are convinced, can be the decisive year. In November there will be a national election. Candidates for Congress and even the White House cannot escape the responsibility of making a public commitment on this issue.

Here is the great opportunity for you, the elderly citizens of this country, to make your voices heard and to obtain the results to which you are entitled. Write to your Congressman and Senators. Write to the candidates for the Presidency. Tell them in your own words how urgently the Forand bill is needed. Inform them of your determination to go to the polls on election day and vote for candidates who support this essential reform.

One thing is certain—you may be getting on in years, but you are still full-fledged American citizens. In a democracy like ours, your right to vote is your most powerful weapon. Use it and use it wisely.

I can assure you that the AFL-CIO will back you up to the hilt. We took on this fight knowing the odds against us, but convinced that the goal was worth the struggle. Now that we can see that goal almost within reach, we are determined to redouble our efforts for this great victory for humanity.

Soil Productivity a Basic Resource

EXTENSION OF REMARKS

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. LEVERING. Mr. Speaker, on March 19, the Newark Advocate, one of the fine daily newspapers in my congressional district, published a special edition heralding the advent of a soil improvement program undertaken by many farmers of Licking County under the leadership of Robert Havener, in charge of the Extension Service, Kenneth Thomas of the Soil Conservation Service, Russell Hoar of the Licking County Agronomy Committee, and the lime dealers in the county. As a member of the Committee on Agriculture and as an operator of a small cattle farm of my own, I heartily endorse the efforts of all those participating in this worthwhile project.

Mr. Speaker, America today is essentially an urban Nation. Seven out of every eight people live in cities and towns, and the proportion is growing larger every year.

This does not mean that farming is any less important than when we were predominantly a rural people. Of every eight persons, the seven who live in town depend upon the eighth who stays on the farm to grow the food and fiber they all must have to live. And the commerce involved in getting the produce of the lone farmer to the seven

urban consumers accounts for nearly 40 percent of the Nation's economy.

Let us not imagine, either, that the urban dwellers are entirely unaware of their debt to agriculture. Many, like myself, remember their beginnings on the land. From my childhood in neighboring Knox County, where I attended a one-room country school, I have an almost instinctive reverence for fertile soil and bountiful fields. It is natural, then, that I applaud the Newark Advocate on its special edition dedicated to sustained soil productivity.

Central Ohio has been an area of pioneering developments in soil conservation and soil improvement. One of the earliest soil erosion experiment stations was located at nearby Zanesville, where scientific studies soon showed that more crop nutrients are lost by soil erosion than are removed in the crops themselves.

Research at this station also emphasized that the correct use of fertilizers could reinforce soil conservation practices. Since a dense plant cover is the best defense against erosion by water, a high level of fertility makes soil protection easier.

Other important lessons in runoff control and soil management have been learned at another nearby research station at Coshocton. The Soil Conservation Service now maintains a training center there for its employees who serve the northeastern part of the United States.

Farmers of Licking County were quick to organize a soil conservation district through which they could make use of the skills of trained conservationists and other public services to apply modern farming methods to their own land. In fact, 95 percent of the agricultural land in Ohio is now in soil conservation districts.

The complete conservation plans that conservation farmers follow make most efficient use of fertilizers and keep soil at its top productivity. Erosion control measures prevent wastage of plant nutrients in runoff water; good soil tilth makes moisture and fertility most readily available to crops. Fertilizers in turn make the combination of good farming practices more effective.

We all owe a debt of gratitude to farmers who thus acquit themselves as good husbandmen and assure our Nation a continuing bounty of food.

Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an excellent editorial contained in the aforementioned edition of the Advocate which points up the importance of soil testing:

[From the Newark (Ohio) Advocate, Mar. 19, 1960]

DON'T GUESS—SOIL TEST DURING FERTILITY WEEKS

One of the main concerns of a Licking County farmer is the productivity of his soil. The greater the soil's fertility, the greater, both in quantity and quality, are the products he can take to market. During the next 2 weeks, every Licking County farmer has the opportunity of knowing more about the productive capacities of the soil on his own farm. Every farmer should take advantage of this opportunity and ask for a soil test.

The farmer's responsibility in our way of life is not to himself alone. Upon him depends the very life of all of us; for without him our food supply would be practically nonexistent. It is the farmer's responsibility, then, not only to produce efficiently for the sake of his own profit, but for the sake of a growing and expanding American population. Upon the farmer rests the problem of producing not only for today, but for thousands of tomorrows as well.

With the cooperation of the Extension Service, the Soil Conservation Service, the Licking County Agronomy Committee and the lime dealers all over the county, Soil Fertility Weeks have been set up to help farmers test their soil—to determine its present ability to produce and to determine how it can better be used in the future. Taking a soil sample is simple and takes very little time. Elsewhere in this special agricultural edition of the Advocate, soil sampling stations have been listed for easy reference.

It has been proved that millions of dollars more can be added to Licking County's farm income yearly. We have scarcely begun to get production out of our soil that lies there. It is clearly the responsibility of every Licking County farmer to increase his production by improving his own operation and efficiency for the benefit of us all.

Don't guess—soil test during Soil Fertility Weeks.

Democratic Party of Puerto Rico

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. ANFUSO. Mr. Speaker, Puerto Rico is building up a great Democratic Party which, I predict, will in the near future play a vital role in public affairs on that island. The chairman of the Puerto Rican Democratic Party is my very dear friend, Jose A. Benitez, a very capable and alert young man with fine leadership ability. He will some day go far in Puerto Rican politics.

For the first time in the history of Puerto Rico, the Democratic Party has been officially registered and will actively participate in the local elections next November. The party was registered on March 19, 1960. Leading its slate of candidates in the coming elections will be Carlos Chardon, a note scientists and public planner, who has been nominated for Governor.

The Democratic Party of Puerto Rico is now on record in favor of statehood and its delegates to the Democratic National Convention in July will undoubtedly request that the 1960 Democratic platform include a plank in favor of Puerto Rican statehood.

As the author of a bill, H.R. 7003, on the admission of Puerto Rico as the 51st State of the Union, which has been favorably reported by the Department of Defense, I want to congratulate the Democratic Party of Puerto Rico and its chairman, Jose A. Benitez, on the occasion of the steps just taken to bring the party officially to the attention of the people, and to convert it into a mass political movement. May this prove to be

a most auspicious beginning and may they go from strength to strength.

Under leave to extend my remarks, I wish to insert into the RECORD a brief article from the San Juan Star, of San Juan, P.R., published on March 21, 1960, on the subject:

[The San Juan Star, Mar. 21, 1960]

DEMOCRATIC PARTY DEBUTS ON CULEBRA REGISTRATION

(By Harold J. Lidin)

The nascent Democratic Party registered Saturday in Culebra, the tiny island of the east coast of Puerto Rico where a total of 283 persons voted for Governor in the last general election.

Because of its small size, Culebra is a favorite launching pad for new political parties.

The Culebra registration is believed to be the first by the Democrats since that group announced its entry into the November election fray 2 months ago.

The Democrats registered 31 persons, 3 over the 28 signatures needed. The Commonwealth's election law requires that new parties must register at least 10 percent of the number of those voting for Governor in the last previous election to get on the ballot.

The Culebra signatures were sworn before Justice of the Peace Frederick Fishbach, at the request of the Democratic Party.

The latter recently announced that the Democratic gubernatorial candidate in November will be scientist and public planner, Carlos Chardon, with Lawyer Orland Antonsanti slotted for Resident Commissioner.

The Democratic platform calls for Puerto Rican statehood, when economic conditions permit. Also, Chairman Benitez has stressed in his campaign talks the alleged need for the insular political parties to work closely with the national political groupings.

Benitez, who claims he has a guarantee that the national Democratic Party will include statehood in its 1960 platform, predicts that the Democratic Party will be instrumental in securing statehood for the island.

The Late Honorable Russell V. Mack

SPEECH

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mrs. ST. GEORGE. Mr. Speaker, I want to add my tribute to the many others paid to my friend and colleague, RUSSELL V. MACK, of Washington.

RUSSELL MACK came to the Congress shortly after I did, so I have known him for high on 14 years. He was in every way a good Congressman, hard working, careful and fair to all the people of his district, and speaking only on the subjects he knew and on which he had all the facts.

I went once to RUSSELL MACK's district and was deeply impressed by the sincere regard and affection in which he was held by his constituents, their grief and sense of loss at his passing will be very great indeed. To Mrs. Mack and his bereaved family I want to send my heartfelt sympathy in these tragic hours, and hope that they may find some consolation in the thought that he died at his post doing his duty for our country.

Progress U.S.A.—Fairfield County, Conn.:

A Whale of a Tale—No. 3

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. IRWIN. Mr. Speaker, in my series of insertions on "Progress U.S.A.—Fairfield County, Conn." I have been endeavoring to point out the economic importance of the area I represent.

It is highly interesting to point out that if Fairfield County were a State, its population would top New Hampshire's, buying income would make it a Rhode Island, total retail sales would top Montana's, food bill would exceed Vermont's and North Dakota's, gas and oil sales would match Nevada's, auto sales would equal South Dakota's, lumber and building sales would rank it with New Mexico, furniture and appliance outlays would surpass Utah's.

The source for these comparisons, Mr. Speaker, is Sales Management magazine, the bible of the selling world.

Those, I maintain, are impressive comparisons, Mr. Speaker. Fairfield County, No. 2 in the United States in buying income per family, obviously is a national leader in many other indicators of dynamic development.

Take a look, for example, at the following excerpt from the Fairfield County Trust Co.'s economic newsletter and fact sheet on the growth of development of Fairfield County for December-January, 1960:

RETAIL SALES: A WHALE OF A TALE

Buying power of Fairfield County families is growing and growing.

County merchants rang up \$827,151,000 in sales in 1958, according to the U.S. Commerce Department's latest survey—17 percent more than 1954, when the last count was taken.

Familywise, Commerce found an average of \$89 a week going for food, autos, clothing, home furnishings, and gas and oil to run their cars. Fairfield County householders are currently top spenders in the State, about 8 percent more than Connecticut's \$82 average, and 19 percent better than the United States' \$75.

Higher incomes—and higher prices—show up dramatically in what county families have been budgeting over the years. Back in 1948, they could figure about \$71 a week for their wants. By 1954, it had climbed to \$83.

United States, Connecticut, and Fairfield County retail sales, percent gains, 1948-58 and 1954-58

	1948-58	1954-58

¹ Not available.

Source: U.S. Department of Commerce.

Of every retail dollar spent in Connecticut in 1958, some 28 cents was spent in Fairfield County's 6,609 stores. Since these stores comprise 26 percent of the State's total, it means that slightly more dollars pass over the average county counter. These mountains of sales provided 30,954 retail sales jobs and paychecks totaling \$93.5 million.

From 1948 to 1958, retail trade in the Nation rose 54 percent while Fairfield County gained 60 percent. Local increases ranged as high as 71 percent for Stamford and 67 percent for Norwalk.

Banking in Fairfield County: Deposits in Fairfield County commercial banks have swelled by \$136 million in the last 5 years. By the end of 1958, total had risen to \$732 million, up nearly one-fourth since the end of 1954. U.S. gain was one-sixth. During 1958 alone, Fairfield County's banks added over \$38 million in deposits.

Uncanceled orders: The Post Office's first volume order for automatic mail handling equipment has been awarded to Pitney-Bowes in Stamford. The \$2,250,000 contract calls for 75 automatic facing and canceling machines. Pitney-Bowes just finished its own \$8,500,000 expansion and modernization program.

Insurance hi-lifers: Based upon data from the Institute of Life Insurance, the average Fairfield County family has some \$15,300 in life coverages. That adds up to some \$2,750 million in force. Average for all Connecticut families is nearly \$13,700. Both top U.S. mean of \$9,600.

Homes sweet homes—and apartments too—continued to go up at a brisk pace in Fairfield County last year. Total new dwelling units authorized by permits came to over 5,600, against less than 5,000 in 1958. Slowed in the second half of the year by a tight mortgage market, residential building was still up 13 percent from 1958, 21 percent from 1957, and matched boom year, 1956.

Advisory Council on Public Assistance
Endorses H.R. 6422

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. FORAND. Mr. Speaker, I would like at this time to bring to the attention of the House the recommendations of the Advisory Council of Public Assistance and to point out that the only legislative proposal now pending in the House which would implement the majority recommendations of this expert group is the comprehensive Public Welfare Act, incorporated in H.R. 6422, introduced by me in this session on April 15, 1959. This bill is now pending before the Ways and Means Committee, where I hope it may shortly receive serious study in the light of these recommendations.

The Advisory Council on Public Assistance was established under section 704 of Public Law 85-840, the Social Security Amendments of 1958, "for the purpose of reviewing the status of the public assistance program in relation to the old-age, survivors, and disability insurance program, the fiscal capacities of the

States and the Federal Government, and any other factors bearing on the amount and proportion of the Federal and States shares in the public assistance program." As required by the law, its findings and recommendations were submitted to the Secretary of Health, Education, and Welfare and to the Congress on January 1, 1960, and will shortly be available as a public document.

The following individuals served as members of the Advisory Council on Public Assistance:

William L. Mitchell, Commissioner of Social Security, Department of Health, Education, and Welfare, Washington, D.C., Chairman.

Frank Bane, Consultant to the Director, Office of Civil and Defense Mobilization, Washington, D.C.

Harry A. Bullis, former chairman of the board, General Mills, Inc., Minneapolis, Minn.

John E. Burton, vice president, Cornell University, Ithaca, N.Y.

Wilbur J. Cohen, professor of public welfare administration, University of Michigan, School of Social Work, Ann Arbor, Mich.

Miss Loula Dunn, director, American Public Welfare Association, Chicago, Ill.

Mrs. Katherine Pollak Ellickson, assistant director, Department of Social Security, American Federation of Labor and Congress of Industrial Organizations, Washington, D.C.

Raymond W. Houston, commissioner, New York State Department of Social Welfare, Albany, N.Y.

Bernard Lander, associate professor of sociology, Hunter College, New York, chairman, Commission of Family and Youth Welfare of the Synagogue Council of America.

William R. MacDougall, general counsel and manager, County Supervisors Association of California, Sacramento, Calif.

William H. Robinson, chairman, Illinois Commission on Public Aid and Assistance, Chicago, Ill.

Charles J. Tobin, Jr., secretary, New York State Catholic Welfare Committee, Albany, N.Y.

Rev. William J. Villaume, executive director, Department of Social Welfare, National Council of the Churches of Christ in the U.S.A., New York, N.Y.

I ask unanimous consent that the recommendations of this representative group be inserted in the RECORD at this point and would like particularly to draw attention to recommendation 1 and 2 relating to aid for all needy persons with an optional plan whereby States might choose to establish a single comprehensive plan of administration or continue the present categorical system; 4, requiring the abolition of restrictive residence requirements; 7 and 14, urging equitable treatment among the categories; 12, providing a more equitable distribution of Federal funds; and 13, raising the Federal maximums—all of which would be achieved under H.R. 6422.

The official text of the recommendations approved by the majority—three members dissented on certain recommendations—follows:

RECOMMENDATIONS

1. EXTENSION OF COVERAGE OF FINANCIALLY NEEDY PEOPLE

The Social Security Act should be amended to add a new provision for Federal grants-in-

² Dissented on certain points.

aid to States for the purpose of encouraging each State to furnish financial assistance and other services to financially needy persons regardless of the cause of need (including, for example, the unemployed, the underemployed, and the less seriously disabled).

Excluded specifically from the present public assistance categories are persons in nonmedical public institutions, patients in hospitals for tuberculosis or mental diseases, patients in medical institutions as a result of a diagnosis of tuberculosis or psychosis, and children in foster homes and in public or private institutions. These exclusions have been in the law for some time, and should be reevaluated and studied. In the meanwhile, the new legislation should retain them.

2. OPTIONS AVAILABLE TO STATES

States should have freedom of choice in determining whether public assistance should be administered as a single program or as separate categorical programs. States should have the following options:

(a) Establishing, under a new title, a single category for financially needy persons to include all those covered under the existing programs and additional groups of needy persons not now covered, thereby eliminating the separate categories;

(b) Continuing the present categorical programs and adding a new category of general assistance under the new legislation;

(c) Retaining one or more of the present federally aided categories (for example, aid to the blind, which, in a few States, is administered by another State agency) and consolidating the remaining groups of needy persons in a single category; or

(d) Expanding the existing federally aided categories to include additional needy persons.

3. EXTENSION OF AID TO DEPENDENT CHILDREN PROGRAM

Under the existing provisions for aid to dependent children, Federal grants-in-aid are available to the States only for the assistance of children deprived of support or care because of the absence, death, or incapacity of one parent. As an ironical result, in many States, destitute children living with two able-bodied parents are actually penalized. On the premise that a hungry, ill-clothed child is as hungry and ill clothed if he lives in an unbroken home or if he were orphaned or illegitimate, the program for aid to dependent children should be expanded to include any financially needy children living with any relative or relatives "in a place of residence maintained by one or more of such relatives as his or their own home."

4. RESIDENCE REQUIREMENTS

The great majority of States have residence requirements that, with much resultant hardship, exclude many financially needy persons from public assistance. Federal grants-in-aid should be available only for those public assistance programs imposing no residence requirement that debar any needy person in the State from help to which he would otherwise be entitled.

5. ADEQUACY OF ASSISTANCE

(a) In view of the evidence of unmet need, steps should be taken by the Federal, State, and local governments toward assuring that assistance payments are at levels adequate for health and well-being.

(b) The Federal Government should exercise greater leadership in assuring that assistance payments are at levels adequate for health and well-being. It should promote greater public understanding as to what constitutes a level of living sufficient to maintain health and well-being, and the relationship of present payments to such level. As specific steps toward these ends, the Federal Government should exercise leadership in (1) developing up-to-date bud-

get guides, for typical families, showing the items of living requirements and their costs necessary to sustain a level of living adequate for health and well-being; (2) making these budgets available for the guidance of States in evaluating their own budgets; (3) requiring periodic State reporting on budgets in use, and on actual individual payments in relation to these budgets; and (4) publishing periodically information on budgets in actual use in individual States and other data significant in indicating adequacy of appropriations and assistance payments in each State.

6. ADEQUACY OF MEDICAL CARE

(a) Since it appears that future public welfare costs may increase largely because of increasing medical care needs and costs, Federal and State Governments, in cooperation with nongovernmental agencies, should take a more active role in stimulating more comprehensive medical services of high quality, including preventive services.

(b) Steps should be taken by the Federal, State, and local governments toward assuring that health services available to public assistance recipients are comprehensive in nature and of high quality. Improvements in medical care should not be accomplished by reducing money payments to recipients.

(c) The Federal Government should exercise greater leadership in stimulating and encouraging States to extend the scope and content and improve the quality of medical care for which assistance payments are made to or on behalf of needy individuals. As specific steps toward this end, we recommend Federal leadership in (1) developing guides to States for evaluating and moving toward improving their programs of medical care; (2) requiring periodic State reports on types and amounts of medical care for which assistance is paid; and (3) publishing periodically comparative State data secured from these reports and other information that will promote greater public understanding about needed medical care.

(d) The Federal agency should establish a broadly constituted Medical Care Advisory Committee to advise it on all aspects of medical care in public assistance.

7. EQUITABLE TREATMENT AMONG CATEGORIES

Currently there is an often striking disproportion in payments in the same State among the public assistance programs; for example, old-age assistance payments tend almost everywhere to be relatively more adequate than aid to dependent children payments. States should be encouraged to apply the same assistance standards to all categories of needy persons, and to ensure that similar treatment is accorded to persons in similar circumstances, regardless of the particular form of public assistance. By similar we do not, of course, mean identical. Obviously there are differences in the living requirements of, for example, a 66-year-old public assistance recipient living alone in a large industrial city and a 4-year-old child living with a rural family. But determination of the extent of need and the amount of assistance, including payments for medical care, can and should be realistically related to known facts about these differences, without partiality for one categorical group as compared to another.

8. COMMUNITY PARTICIPATION AND USE OF VOLUNTARY AGENCIES

The Federal Government should encourage each State to (a) stimulate public interest and increase public knowledge of the role of public welfare programs; (b) establish appropriate advisory committees; (c) utilize services of voluntary agencies, when available and qualified, to serve recipients of public assistance; and (d) involve private as well as public organizations in studying problems of family disintegration and

breakdown, and developing coordinated programs for strengthening family life.

9. THE FEDERAL SHARE

Under present conditions, the proportionate Federal share of total public assistance expenditures, including general assistance, for the Nation as a whole, should not be less than is currently provided under the Social Security Amendments of 1958. For the present, the overall average Federal proportion for all States combined, for all public assistance expenditures, including general assistance, should fall between approximately 50 and 60 percent.

10. THE FEDERAL AMOUNT

To enable the public assistance program to expand or contract sensitively with changing conditions, the amount of the Federal appropriation should remain "open-end"; that is, the amount should be the total necessary to match State-local expenditures for public assistance under the formula specified for Federal financial participation, with no limiting predetermination of what the total shall be.

11. THE STATE SHARE

All States should exert fiscal effort for public assistance commensurate with their ability to do so in relation to their State-local resources.

The States should take steps to modify the financial burden on localities for public assistance if the availability and adequacy of assistance is adversely limited by local financing or resources.

12. EQUITABLE DISTRIBUTION OF FEDERAL FUNDS

The specifications of the Federal formula determining the Federal proportion for individual States should recognize variations among States both in fiscal ability and incidence of need to a greater extent than the present formula does. The Federal percents for individual States should be related to interstate variations in fiscal ability and need for the total of assistance expenditures in which the Federal Government participates, instead of only part of such expenditures as under the present formula. The Federal provisions should specify limits to the range among States in Federal percents; that is, the minimum and maximum percents to be received.

13. FEDERAL MAXIMUMS

(a) Maximum amounts of assistance expenditures in which the Federal Government will participate should continue to be specified, as now, in terms of an average amount of all assistance paid per recipient, including both money payments to recipients and payments to suppliers of medical care.

(b) The specified maximums should be high enough so as not to hamper State efforts to provide assistance at levels adequate for health and well-being and to meet rising costs of basic living requirements and medical care. Current Federal maximums should be raised accordingly.

(c) Any difference in Federal maximums specified for different groups of needy people (for example, per adult and per child), should be reasonably related to available knowledge about differences among the groups in the cost and content of their living requirements. The current Federal maximums for aid to dependent children do not meet this criterion, and should be raised to an equitable relationship with the other programs.

14. SINGLE FEDERAL MATCHING FUND

To promote equitable standards among the different categories a single formula for Federal financial participation should be used, to apply to all categories of assistance and to all assistance expenditures.

15. TRANSITION PERIOD

In the event that a revised formula would result in reduced Federal funds for any State, a transition period should be pro-

vided to permit States to adjust to such changes, either by postponing the effective date of revised legislation or by building into the formula a device for gradual reduction in the Federal share over a period of years.

16. ADMINISTRATIVE COSTS

The Federal share of administrative costs for public assistance should remain at 50 percent for the Nation as a whole, and for each State.

17. TRAINING AND PERSONNEL

(a) In order to improve administration, promote social rehabilitation, and help prevent dependency, States should increase the numbers and raise the qualifications of personnel administering the public assistance programs.

(b) To assist States in increasing the number of their qualified staff, the existing Federal matching provisions for educational leave programs should be amended to provide 100 percent Federal funds for training of public welfare personnel, as is provided in other specialized fields.

(c) As an aid to increasing generally the present short supply of social workers, it is recommended that, in addition to grants for other groups, 100 percent Federal funds be made available to accredited graduate schools of social work for the training of persons in such fields as strengthening family life and caring for the needs of the aging.

(d) States should take such action as is necessary to assure that the salaries of public welfare personnel are established and maintained at levels required to obtain and retain competent personnel, in order to provide the services required by public welfare recipients.

18. STRENGTHENING FAMILY LIFE

(a) Funds authorized by the Congress under the Social Security Amendments of 1956 should be appropriated for grants for research and demonstration projects such as those relating to the prevention and reduction of dependency, coordination between private and public agencies, and improvements in social security and related programs, and research leading to strengthening family life.

(b) We recommend the establishment of a national institution which would have the responsibility for studies and demonstration programs leading to strengthening of family life.

19. STRENGTHENING SOCIAL INSURANCE

The Council supports the generally accepted principle underlying the American social security system that the social insurance programs should provide the primary defense against the common risks to economic security. The Council regards the strengthening of the social insurance programs as an important objective of public policy. Because of the close relation between any extension or improvement in social insurance and the extent of need for public assistance, the Council has taken note of the major proposals for changes in the old-age, survivors, and disability insurance program and in the State unemployment insurance programs that have been advanced in recent years. It has not attempted to resolve the issues relating to all of these proposals; it has, however, reached conclusions regarding some that would have an immediate impact on public assistance. As desirable steps, the Council recommends the following:

(a) Coverage under the contributory wage-related program of old-age, survivors, and disability insurance should be extended to include as many additional workers as possible not now covered under any public retirement system; in particular, the program should be extended to such additional farm and household workers as it is feasible to cover.

(b) The proper Federal authorities should take all feasible measures to assure that everyone who is covered by law under the old-age, survivors, and disability insurance program does in fact have his covered earnings reported and recorded to his credit, so that he will receive the full amount of benefits to which he is entitled. Additional effort in this respect seems to be particularly necessary for migratory farmworkers.

(c) The provision that disability insurance benefits can be paid under the old-age, survivors, and disability insurance program only to people age 50 and over should be eliminated; benefits should be paid to qualified disabled workers regardless of age.

(d) Benefit levels under the old-age, survivors, and disability insurance program should be adequate and kept in line with the growth of the economy; to this end, increases in wage and price levels should be appropriately reflected both in benefit amounts and in the maximum amount of earnings taxable and creditable toward benefits.

(e) The Federal-State unemployment compensation system should be extended to improve its protection of the unemployed.

(f) Continued attention should be given to strengthening the contributory wage-related social insurance programs with particular view toward reducing need for public assistance.

20. PERIODIC REVIEW OF PROGRAM

The status of the public assistance programs, including their adequacy in promoting health and well-being, the formula for Federal financial participation in public assistance costs, and their relationship to social insurance programs should be reviewed and reevaluated by an advisory council at least once every 5 years. The Social Security Act should be amended to authorize such a council.

Forest Amsden on the Need for Good Political Reporting

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. PORTER. Mr. Speaker, Forest Amsden, the executive editor of the Coos Bay (Oreg.) World, one of the leading newspapers in Oregon, has been spending this session here in Washington as a political science fellow. As will appear in his piece that follows under a previous consent, Mr. Amsden is not impressed by the job of political reporting done by newspapers, radio, and television. He believes that:

The trouble is that political reporters become so wound up in their own theories of what constitutes political reality that they make it impossible for public figures to get through to the public.

This is indeed a regrettable state of affairs in a country that depends on an informed electorate. Here is his Letter from Washington as it appeared in the Coos Bay World for March 1, 1960:

LETTER FROM WASHINGTON—POOR UNITED STATES CAN'T AFFORD DEFENSE, SCHOOLS, WATER

(By Forest Amsden)

WASHINGTON, D.C.—President Eisenhower's veto of the water pollution bill made for fascinating reading.

The President termed our rivers and streams a priceless national asset. Then he went on to maintain that preservation of this priceless national asset is strictly a local problem, not calling for anything so insidious as Federal funds.

But he did see some hope. He planned a conference at which the States could discuss how they could cooperate with each other in cleaning up interstate streams. The U.S. Government would thus fulfill its part—that of sort of a penniless fairy godfather.

It now appears we not only can't afford to defend ourselves, and can't afford to educate our children, but we also cannot afford to clean up the sewage before we drink it.

This doesn't seem much of a problem in southwestern Oregon, nor in the whole Pacific Northwest. In the East it is a terrible problem, however.

The cities are turning increasingly corrupt water into their mains. Streams are becoming increasingly polluted by industrial and human wastes.

Washington, D.C., is one of the worst examples. The beautiful Potomac River is little more than an open sewer above the city and far worse below. Washington's drinking water is hazy. It's up to you to guess what it is hazy with.

Maybe the talk at President Eisenhower's interstate pollution conference will help settle some of that stuff in Washington water and that of hundreds of other municipalities facing the same problem.

If democracy is to work, the people surely must be informed of the issues they face.

If a democracy is to elect adequate officials, it must know the candidates, what the candidates represent and how candidates propose to attack problems.

If that be true, this democracy is in sorry shape.

As a newspaperman I am appalled at the performance of the newspapers (with a few notable exceptions) in reporting political events. With even fewer notable exceptions, radio and television are doing as sorry a job.

The trouble is that political reporters become so wound up in their own theories of what constitutes political reality that they make it impossible for public figures to get through to the public.

A candidate attempts to outline his beliefs in a speech. The next morning he looks at the papers to discover the writers have ignored the speech and seized upon something completely irrelevant.

Two recent examples occurred in California where Senator JOHN KENNEDY and Senator HUBERT HUMPHREY addressed the same meeting. Both talks were excellent outlines of what each man believed. Both talks were extremely well-received by the live audience.

But both HUMPHREY and KENNEDY took the first 30 seconds of their talks to mention the fact that they did not approve of RICHARD M. NIXON. Both did this more or less as an aside, as if to warm up a partisan audience, and then went on to the weight of the speech.

The papers headlined: "HUMPHREY and KENNEDY Attack Nixon." The stories under the headline reiterated that an "attack" had had been made, period. Nowhere in the story is there an indication that either speaker went on for 40 or 50 minutes with an exposition of principle and platform.

Net effect is that the people of California, or at least the State's newspaper readers, think all KENNEDY and HUMPHREY have to offer is an attack on the Vice President.

This falling of the press is not restricted to Democrats. Unless Mr. Nixon strikes out with a personality attack, his press clippings are not notable.

This remains true even though Mr. Nixon can count on fuller treatment of what he says by virtue of being a Republican.

LABEL IS A LABEL IS A LABEL

It's easy to get all fouled up with labels. Once a label is attached to something, its meaning seems to begin changing. This results in the need for a new label.

Example: The National Park Service is casting about for a new label to put on its parkways. As envisioned by the Park Service, parkway meant a road along which people could drive slowly, communing with nature. The road was not meant to hurry, in fact. But the public is beginning to regard a parkway as a four- or six-lane express highway, because the States of New York and Florida—and perhaps some others—have taken to labeling their turnpikes "parkway."

One Congressman is anxiously seeking a new word for "multiple use" as it is applied to national forest lands. The term means the use of a forest area for recreation, grazing, timbering, and other purposes. The public seems to think it means every acre of any given forest area is to have multiple use. Furthermore, recreationalist opponents of grazing and timbering in some areas are beginning to bristle at mention of the label "multiple use."

AFTER RIGHT TO WORK?

Those who favor establishment of diplomatic relations with Communist China are beginning to shy from the word "recognition." True, recognition of a country does not mean that the recognizing nation approves of the nation recognized. Yet to Americans, the word "recognition" seems to imply a cheery hello, a slap on the back and approval. So "I'm in favor of recognition of mainland China" is going out of the political lexicon in favor of "I'm in favor of establishing of diplomatic relations with mainland China."

Many have observed the rapidly changing terminology to label laws or constitutional amendments banning union or closed shops.

Originally, most such proposals were called, by their proponents, antiunion shop propositions. After a few years this came into such general disrepute that the name became "right to work." By now, "right to work" is in growing disfavor and antiunion forces are, it is reported, casting about for a different label.

In many ways, it isn't what something is, but what it's called.

In Memory of Russell V. Mack

SPEECH
OF

HON. DON MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. MAGNUSON. Mr. Speaker, all of us here in the House of Representatives have been saddened by the sudden and unexpected death yesterday, here on this floor, of our colleague from the State of Washington, the Honorable RUSSELL V. MACK.

Naturally, those of us from his own State feel that we knew him best, although his friends indeed were legion. We knew him as a conscientious and hardworking representative of the people of his district and State, and yet one capable of the longer view which places the welfare of the Nation as a whole above sectional and political considerations. This, after all, is the ultimate test of a good public servant.

Mr. MACK served 13 years in this body, always with strong dedication to duty. Despite the seriousness with which he approached his work here, he was in personal relationships easygoing and outgoing, which in part explains the host of friends he acquired here and back home during his lifetime. I say in part, because the basis of an unusually high number of lasting friendships always must be the recognition of an innate strength of character, the capacity for making people instinctively know that here is a good man.

Mr. MACK had that capacity, and we who live on say today: "A good man is gone."

If he had to go, we are grateful that his passing came without prolonged pain, but this does not still the voice of sorrow within us, his friends.

Mrs. Magnuson joins me in expressing heartfelt sympathy to his devoted wife, Laura, and to the other members of their family.

Report From Iowa, More Art Than Corn

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. WOLF. Mr. Speaker, quite often people are inclined to overlook the Middle West when it comes to art and culture. Sunday's New York Times carried a fine article by Emily Genauer which refutes this idea.

I was so proud, when she began her discussion of Midwest art in Cedar Rapids, Iowa, the largest city in my district.

The article follows:

ART: JOURNEY TO THE MIDWEST—REPORT FROM IOWA: MORE ART THAN CORN

(By Emily Genauer)

There was a moment the other morning when, without straining at all, I could have imagined myself in midsummer in a city in the French provinces—Aix, maybe, or Toulouse. The setting and the props were all there. Guidebook in hand, I found myself in front of a wonderfully satisfying church, studying its proportions and detail. I had just been to see some stained glass windows in another building. I'd already taken in one fine exhibition that morning, and was scheduled to see some others before driving on to the next town.

Only the guide book was not Michelin. It was the WPA-prepared "Iowa, a Guide to the Hawkeye State." The city wasn't Aix, but Cedar Rapids. The church was no soaring Gothic structure but the daring, circular St. Paul's Methodist, constructed by Louis Sullivan, master of Frank Lloyd Wright, back in 1913, and very similar to the circular auditorium at Wright's Guggenheim Museum. The stained glass windows were by Grant Wood, in the Cedar Rapids City Hall. The exhibition, in the two art galleries of Coe College, in the same city, was of such caliber as to make for a major event in New York, including paintings by artists like Tamayo, Matta, Leger, Lansky, Stuart Davis, Ben Shahn, Hans Hofmann, Arthur Dove, Marin, Kuniyoshi, Hopper, Menkes, Tobey, Weber. The sculpture was by Jacques Lipchitz, David Smith, Reg Butler, Kenneth Amitage, Jose de Rivera.

The next town I was heading for was Ames, and after Ames, Des Moines. And in each I saw exhibitions no less distinguished. Plus some more handsome modern architecture (Saarinen's Des Moines Fine Arts Center) and some that was striking, but not as successful (Saarinen's several buildings for Drake University). Plus acres of mural (including a huge Stuart Davis abstract wall in the student's cafeteria at Drake).

Plus private collections of such quality as to make the eyes of a jaded New Yorker pop. (Imagine walking casually into a pleasant but unpretentious house in a city like Cedar Rapids, owned by someone whose name has not been publicized among the country's big, stylish collectors, and finding a smallish living room hung with exceptionally handsome canvases by Picasso, Gris, Matisse, Kandinsky, Munch, Villon, Braque. In other rooms were first-class examples by Leger, Delaunay, Friesz, Chagall, Soutine, Dufy, Bonnard, Valadon. Lining the halls and staircase walls were prints by Rembrandt and Goya.)

EAGER AUDIENCE

More important than the exhibitions, the buildings, the murals, even the collections, was the excitement about art in those small midwestern cities. At Coe so many students turned out to hear a lecture by a visiting art critic very few could ever have heard of before, that the whole affair had at the last moment to be moved into a larger auditorium to accommodate standees. At Iowa State University, which is an agricultural and technical school without a fine arts department at all, the audience of students and faculty waited patiently in the auditorium for over a half hour while my car plodded along highways running alongside cornfields now buried under heavy snows.

And just as important as the eagerness was the knowledge. There couldn't be any doubts, from the questions students threw at me, that not only were they familiar with the last word in modern art, but that they had no predisposition to accept anything simply because it was the last word. (I'll never forget the pretty girl in the first row who raised her hand and asked, "But why is abstract art the art of our times?" Or the boy who asked, "But don't you consider emotional states to be as much a part of reality as the things you can see?")

I shouldn't have been surprised, really, at all that's been going on in the Midwest, especially in Iowa and Illinois. For years I've been receiving catalogs of college exhibitions out there, known the caliber of their presentations, and of their art staffs. Especially I've been aware of a healthy skepticism in these areas, a resistance to any brainwashing by New York dealers and museums. In Texas, for instance, I've long observed that exhibitions and collections have been weighted in favor of the chic and the avant garde. In Iowa, on the contrary, one has always felt, even in the exhibition catalogs, the presence of questioning open minds.

In the current Iowa State exhibition, for instance, the students, who are normally occupied with agriculture, technology, home economics, architecture, are confronted by a collage by Marca-Relli, but also a Walt Kuhn acrobat; an abstraction by Kienbusch, but also a landscape by Edward Hopper; a thread-string-paper-and-leaf construction by Sue Fuller, but also a Reginald Marsh drawing; a slashing Hans Hofmann abstraction, but close to it a watercolor by John Marin. The Des Moines Art Center is currently hung with a beautiful exhibition called "The Painting of Light," which starts with a 14th-century Florentine Crucifixion, and ends with abstractions by Ropelle and Stamos, including, en route, works by artists ranging from Bonington to Reuben Tam, de Hooch to Robert Henri, Rubens to Rattner, de la Tour to Morris Graves.

WAS I RIGHT?

I think maybe the real reason I went off to the Middle West this week was to satisfy my conscience. In a recent lecture at the Museum of Modern Art entitled "Economics, Art, and Environment," Harvard Professor John Kenneth Galbraith stated that the aesthetic response has always been nourished by secure well-being. He then went on to cite American agriculture as a field still especially burdened with economic necessity, and concluded that, as a result, "we expect" the modern practicing farmer to be beyond the reach of "artistic imagination." Having heard what was going on in the Corn Belt, I wrote a column taking strong exception to his statement.

But I've been uneasy about the whole business. Now I know. I couldn't tell how many of the students I talked to intend to become farmers, even among those at Iowa State. Most of them come from farm communities and will function in a farm economy. I don't even know, not being an economist, that the area is really as prosperous as it seems. Perhaps it is burdened with economic uncertainty. But one thing I'm certain, as a result of my trip, there's an astonishing amount of culture along with agriculture in Iowa.

And maybe there has been for a long time. What were we doing in the East 50 years ago when Iowans were commissioning a rebel like Louis Sullivan to design for their churches and banks, buildings, which even today look fresher and more modern than the new structures lining Park Avenue? We were commissioning pseudo-Greek temples, that's what.

Flood Control Progress in Southeast Missouri

EXTENSION OF REMARKS

OF

HON. PAUL C. JONES

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. JONES of Missouri. Mr. Speaker, the president of the Mississippi River Commission, Maj. Gen. W. A. Carter, was scheduled to speak before the annual meeting of the Missouri Cotton Producers Association, held at Caruthersville, Mo., on Friday of last week. He prepared for that meeting an address which went into great detail explaining the development of the St. Francis River Basin, citing the planning and construction work along the Mississippi River and its tributaries, in southeast Missouri and northeast Arkansas which has taken place during the past several years and which has resulted in creating one of the richest agricultural areas in the world.

Because of the thorough manner in which General Carter has explained what has been done in the past through the cooperation of local interests with the U.S. Corps of Engineers, and what is planned for the future to complete the plan which will protect our area of the country from the devastating effects of floods which have wrought such havoc in the past, I have requested permission to include as a part of my remarks, the address, prepared by General Carter, but which was actually delivered by Col. Marvin Jacobs, district engineer at Memphis, who was called upon at the last

minute when General Carter received an emergency call to come to Washington on the day of the meeting.

I know I am expressing the appreciation of all of the fine people I am privileged to represent, when I say that we are indebted to General Carter, to Colonel Jacobs, and the other competent officials in the Corps of Engineers who have tackled this problem with sympathetic understanding. Because of the importance of this project, it is difficult to refrain from being impatient at times, but I want to say that I have confidence in the plan and want to pledge my full cooperation to its completion at the earliest possible date. May I also express my appreciation to my colleagues in Congress without whose cooperation could not be maintained.

Here is Major General Carter's address:

FLOOD CONTROL PROGRESS IN SOUTHEAST MISSOURI

While I was in Washington during the latter part of February, your esteemed Congressman, Mr. PAUL JONES, asked that I attend your meeting today and that I give you a talk concerning that portion of the St. Francis project which affects southeast Missouri. I am genuinely pleased to be able to accept that invitation and to have the opportunity to talk with you concerning major drainage works directly affecting your area.

Let me first review the tremendous strides which have already been made in flood control and drainage projects affecting southeast Missouri. Less than 75 years ago this fertile land was largely swamp, covered by dense growths of oak, gum, cypress, and willows. It was subject to frequent flooding from, not only the Mississippi, but also other rivers and, because of its flat terrain and the lack of any well-defined channel to serve as a drainage outlet, very little of the land could be cultivated even during dry seasons. The miraculous change which has taken place since that time can be attributed to a very satisfactory partnership between the levee and drainage districts in southeast Missouri and the Corps of Engineers for the Federal Government.

Prior to the time the Corps of Engineers did any work in your area, your levee and drainage districts had started flood control and drainage works which have had a most profound effect on the fertile but then largely untillable lands in southeast Missouri. They had constructed a headwater levee in the vicinity of Cape Girardeau and associated diversion works of sufficient magnitude to prevent some of the more frequent flooding. It is reported that local people had spent something in the vicinity of \$2,500,000 on these levee and diversion works and benefits were realized not only by the people in southeast Missouri but also those in Arkansas as far down as Helena. As a result of the Flood Control Act of 1928 the Corps of Engineers expended \$3 million on improvement of the headwater levee and the associated diversion works to the point where they now protect the vast area of southeast Missouri and eastern Arkansas from Mississippi River waters of great magnitude, the so-called project flood.

There are 122 miles of Mississippi River levees between Cape Girardeau, Mo., and the Missouri-Arkansas State line. These levees, together with the 20 miles of the Little River headwater diversion levee, have been raised to project grade and section and now protect about 992,000 acres of rural and urban lands in southeast Missouri from a Mississippi River project flood.

The St. Johns Bayou project consisting of

a controlled outlet culvert structure just above New Madrid, Mo., is complete. It prevents the entrance of Mississippi River backwater into the St. Johns Bayou drainage area of southeast Missouri. The control structure and closure levee provide the link which makes possible the continuous levee from Cape Girardeau to the State line.

Therefore, we enter the present with a feeling of tremendous accomplishment with respect to protection of southeast Missouri from its most disastrous source of floods, the Mississippi River. This protection has been provided at a cost of \$21½ million by the Federal Government and the expenditure of many millions of dollars by those who live in the protected area.

What are we doing today to improve the area?

There is one God-ordained fact which we are forced to recognize in determining the order in which we will accomplish flood control and drainage projects. It is the very simple and unassailable fact that water flows downhill. It is for this reason that we follow a firm policy of constructing levees from upstream downward, and channels from downstream upward.

With the protection from Mississippi River flooding of southeast Missouri, additional protection can only be provided by improved runoff of local rainfall. This in turn demands the construction of major drainage channels from downstream to upstream on the St. Francis and Little Rivers along with complementing levees. The immediate past has witnessed the accomplishment of major construction works of this type. In contrast with the long construction time on the headwater and Mississippi River levee protection for southeast Missouri, the channel work is approaching that area rapidly. Instead of being started some 75-odd years ago, this channel work was started in the form of the Madison to Marianna floodway in 1953. In 1960, just 7 years later, we are preparing to start work on the link which will carry the channel into Big Lake, and which will provide an adequate outlet for Big Lake and the area which drains into it. As we move north, more and more good will be done up here. With this statement, I am ready to discuss the present construction program.

At the present, the major obstacle in the path of an adequate outlet for southeast Missouri drainage is Big Lake. We are therefore forced to focus our attention on this area which, unfortunately from the viewpoint of those who live in Missouri, is in another State—Arkansas—and is, in addition, an area in which the Arkansas Game and Fish Commission and Federal fish and wildlife organizations have profound interest.

The Big Lake area is like a funnel, narrow at the downstream end and wide at the upstream end; and like a funnel, to be effective it must have an adequate outlet, it must have sides of sufficient strength to confine the weight of water inside, and it must be free of internal obstructions. Of these three requirements, one has already been met, one other is about to be met, and one presents many difficulties. Confining levees on each side of the funnel have been constructed to grade and section and are known to be effective. The below Pettyville ditches, which will be started in the near future and will be completed in 12 to 18 months, will mean that an adequate outlet will be waiting and ready for use by the time interior construction has been completed in the Big Lake area. This leaves for resolution only the subject of appropriate flood control and drainage works to carrying the floodflows which are dumped in the mouth of the funnel.

There has been talk that the corps has no plan to accomplish that purpose. Such statements are completely and grossly and grossly inaccurate. We do have a definite

plan, and we are confident that it is engineeringly sound, economically feasible, and that it will work.

The main features of that plan are two ditches, one following the east side levee and one following the west side levee.

Let us look first at the east side ditch. This ditch is expected to vary in width from 100 to 150 feet and to have a depth of 10 feet. The bottom elevation of this ditch at the lower end of the Big Lake funnel is expected to be 218 feet. Remember that figure, 218, because I will later want to contrast its elevation with other ditch elevations in the area. This ditch will intercept and drain the Belle Fountain ditch and the State line ditch and will therefore provide for drainage from the area in Missouri, east of Elk chute and from within Elk chute itself. Construction of this ditch already has been authorized by Congress.

The bottom width of the ditch up the west side of the Big Lake funnel will vary from 100 to 120 feet, will be 10 feet deep, and will also have an exit elevation of 218 feet, the same 218. For a distance of about 1 mile below the mouth of the Big Lake funnel, this ditch will have a levee on its left as well as on its right. This levee is required to keep water from backing up in your ditches. From there on down, the spoil on the left or inside of the ditch will be shaped to form a continuous bank at an elevation low enough to permit flood waters from the west ditch to spill over the spoil bank and into the floodway. At its upper end the west ditch will connect directly into ditch No. 81 which drains 17 percent of the area drained by the battery of ditches which flow down the west side of Elk chute.

Now what will these drainage ditches accomplish? First, during nonflood periods the large accumulation of water in ditch 81 will flow unhindered to the sea through a very large ditch with an outlet bottom elevation approximately 15 feet lower than presently provided. Similarly, the flows from Belle Fountain ditch, State line ditch, and from within Elk chute will go down the east side ditch which can readily carry these flows and will also dump its load at an elevation of 218 feet. The remaining ditches coming in at the top of Big Lake will continue to drain as they do now through the central existing ditch (No. 28), the old Little River channel and the existing natural channel in Big Lake. Water will be available from these to fish and wildlife interests to replenish lake losses and to maintain the lake level.

During major floodflows, on the other hand, the waters from these same ditches can spread out over the entire width of Big Lake from confining levee to confining levee and make their way to the leveed floodway below Pettyville and below Highway 18.

During the preparation of our report on the St. Francis Basin which has just been submitted to the Chief of Engineers, the U.S. Fish and Wildlife Service presented a central ditch plan which was supposed to solve the Big Lake problem. It was worked up in cooperation with some of the local people. Their plan consists of a central ditch, about 160 feet wide, with a three-way control structure at its head, and a sill dam at elevation 233.3 at the Pettyville end. This is 15.3 feet above the outlet elevation we propose. We studied this plan most carefully. It could not take care of the water which the west ditch (81) would carry, nor would it adequately handle the east ditch water. Its cost was slightly over \$4 million, and its construction would add practically no flood control or drainage benefits to the Little River area. The benefits to fishing and hunting were sizable, but our most careful appraisal gave the central ditch plan a benefit-to-cost ratio of only 0.4 to 1. The trouble comes from the elevation of the sill dam at the lower end. The facts and figures on these plans are contained in the report

now under review by the Chief of Engineers. I am convinced that the plan we recommend will do the job. What I want to do is to get on with the job. I do not object to the construction of the central ditch in addition to the two that are required to give you the drainage you need. However, since the benefit-to-cost ratio is less than unity, I cannot recommend it.

As I said earlier, much of the money allocated to the St. Francis Basin is being used south of you to get the outlets ready downstream as our work moves upstream. This year we are doing a small amount of work in southeast Missouri on the levee and drainage district on the eastern and northern side of Elk chute.

In fiscal year 1961 we are getting closer to you. There is \$925,000 set up in the fiscal year 1961 budget for work directly concerned with Little River drainage. Much of this is still in the Big Lake area, and \$280,000 is provided to complete the Big Lake floodway ditches below Pettyville; \$170,000 is provided to open up the trestles across the Big Lake floodway at Hornersville and Pettyville. We will start the Big Lake east ditch with about \$93,000. About \$122,000 will be used to degrade levees at Hornersville, State line, and Big Lake which are interfering with the flood drainage out of the Little River drainage district. We will spend about \$104,000 on new levees, levee enlargement, and channel work on the headwater diversion channel and levee. There are some funds included for rights-of-way and, of course, funds included for engineering and design and supervision and administration. There is also an item of about \$283,000 for construction of levees in the Inter-River Levee District, Butler County, Mo.

This does not appear to be a high percentage of the \$4,600,000 included in the budget for the St. Francis Basin. However, almost \$3 million of that money is provided for the channels and relocations in the lower end of the valley to provide the necessary outlets for the flood waters of the whole basin. I can assure you that as the work progresses, the percentage of funds for the basin which will be utilized directly in the Little River area itself will increase.

Now what does the future hold for additional construction work in the Little River watershed of southeast Missouri? Main ditches of the Little River system are to be improved. The Elk chute ditch and ditch No. 81, as well as ditch No. 9 are to be improved, and enlarged. The Elk chute levees are to be completed. At the headwaters of the Little River, the Castor River is to be cleared and ditch No. 24 is to be improved. On the main stem of the St. Francis, additional levees are to be built in Dunklin and Stoddard Counties.

In broader terms, the St. Francis Basin project as now authorized will cost \$86,700,000. To June 30, 1959, project costs amounted to \$30,531,000, and we expect costs this fiscal year to exceed another \$4,900,000. During the year beginning July 1, 1960, expenditures are expected to exceed \$5,900,000.

Upon completion of authorized works, annual benefits returned by the St. Francis Basin project in its entirety will result in a benefit-cost ratio of more than 2 to 1.

Additional works recommended in a current review report would increase the estimated total cost of the St. Francis Basin project to about \$112,871,000.

In summary, I have pointed out that the people of southeast Missouri working in partnership with the Corps of Engineers and through their local levee and drainage districts have freed their extremely fertile and productive lands from the devastating floods of the Mississippi River. They are now in process of providing additional relief to this area from the less devastating but still costly flooding caused by local rainfall. Construction works associated with that relief are proceeding in an orderly fashion and, by con-

trast with past experience in construction of flood control and drainage works, at an extremely rapid rate. We in the Corps are very sensitive to the need for expediting relief for southeast Missouri from these floods.

The immediate focal point of construction activity is Big Lake. We have an economically feasible plan for this area. We are confident of its workability. Those of you who know me, will fully understand that I cannot recommend a plan which is uneconomical and will not consider one which will not provide the drainage and flood control you need.

Finally, the reports that an unfairly small portion of the total funds provided for the St. Francis Basin project is being spent in southeast Missouri is not fundamentally accurate. A definite part of every dollar spent on the St. Francis watershed below the Missouri-Arkansas line helps to benefit those who live in Missouri. Those dollars have unrolled major channel and flood control levees almost to the doorstep of southeast Missouri. The proportion of work to be done right in Missouri will rapidly increase. The work your Representatives in Congress have done to help us proceed at an increased rate should be deeply appreciated by all of you here.

1959 Crop Price-Support Commodity Loans

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. AVERY. Mr. Speaker, I have been including in the CONGRESSIONAL RECORD information on loans made under the 1959 crop price support program by the Commodity Stabilization Service of the Department of Agriculture.

I have introduced a bill, H.R. 9303, to limit these loans to not more than \$50,000 to any one person in a year.

You will recall I stated that the \$50,000 limitation which I proposed is higher than desired. It should be reduced to \$25,000 or less, but from a practical standpoint the opposition to my limitation among the Democratic Members of Congress dictates the position of suggesting a \$50,000 limitation if one is hopeful to have such passed.

The following are the 1959 crop price support commodity loans under \$50,000 but more than \$25,000 by producer. This report covers commodities except wheat for the loanmaking period terminated on January 31, 1960; and the amounts shown represent loans made, without regard to whether the loans have been repaid or will be repaid before maturity. The loans for wheat were listed in the CONGRESSIONAL RECORD of March 24, 1960.

If the limitation as suggested in my bill were reduced to \$25,000, the Federal Government would not be required to make similar loans next year. These loans result in a loss to the taxpayer, because it is not required that the repayment be made in money, rather repayment can be made by commodity. This results in a loss of millions of dollars to the taxpayer.

The table referred to follows:

U.S. DEPARTMENT OF AGRICULTURE, COMMODITY CREDIT CORPORATION

1959-crop price-support commodity loans under \$50,000 but more than \$25,000, by producer

A Summary and Legislative History of Area Redevelopment—Part 1

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. FLOOD. Mr. Speaker, before this session of Congress ends it is my hope and the hope of many of my colleagues that the House and the Senate will have agreed upon an adequate and effective bill to aid the many U.S. communities suffering from chronic and persistent unemployment.

It is also our hope—and this hope is shared by thousands of Americans living in these distressed areas—that President Eisenhower will not again see fit, as he did in 1958, to veto jobs for Americans who want to work but who, because they live in these areas of continuing depression, cannot find work.

The Area Redevelopment Act, sponsored as S. 722 by the Honorable PAUL DOUGLAS in the Senate, was passed on March 23, 1959, by the Senate by a 49 to 46 rollcall vote.

This legislation was revised by the House Banking and Currency Committee and favorably reported on May 14, 1959. Since that time, more than 10 months ago, it has been awaiting action by the House Rules Committee.

Mr. Speaker, I share with my colleagues and with thousands of unemployed Americans throughout our Nation the fervent hope that the House will soon have an opportunity to act upon this proposal.

One of the groups which has led the fight for area redevelopment legislation is the Area Employment Expansion Committee, of 99 University Place, New York 3, N.Y.

Recently this organization prepared an excellent summary and legislative history of the fight for area redevelopment legislation. I should like to list the table of contents of this fine and comprehensive piece of research work:

- I. Introduction.
- II. History of Federal Action Respecting Distressed Areas.
- III. Legislative History Relating to Area Redevelopment Bills.
- IV. Legislation: Principles and Comparison of Bills.
- V. Need for Area Redevelopment Legislation.
- VI. Response to Opponents of Area Redevelopment.
- VII. Positive Features of Bill.
- VIII. Organizations Which Support the Legislation.

Mr. Speaker, I take pleasure in the opportunity to bring this fine research to the attention of Members of Congress by joining with several of my colleagues to insert the entire text in the CONGRESSIONAL RECORD:

I. INTRODUCTION

Proposals for area redevelopment legislation have been before the U.S. Congress for more than a decade. The basic principles have been endorsed by both parties in convention and by their leaders. Differences have involved the amounts of the assistance, the need for integrating rural and urban area redevelopment, the proposals for loans and grants for public facilities, the provision for subsistence grants for the unemployed who are being retrained and the administrative machinery for carrying out the program.

The needs of the chronic labor surplus areas are most urgent. Their problems become more intense and their solution more complicated the longer they persist. The human, social and capital waste is high. The cost is a tremendous burden upon our communities and State and Federal Governments.

It should be emphasized that in virtually every case these local communities have exerted the maximum effort of which they are capable toward their own economic rehabilitation. Residents of the stricken com-

munities have literally given 'til it hurts to raise money for industrial site preparation, plant construction and other services necessary to attract industry. The simple truth is that, in most cases, local financial resources have been exhausted.

So long as these communities remain unassisted in their efforts at redevelopment the Nation is neglecting its commitment under the Employment Act of 1946 to achieve maximum employment, production and purchasing power.

The American people have undertaken to finance economic redevelopment of the distressed and underdeveloped areas in foreign countries. It appears appropriate that we establish a similar program for our own people confronted with comparable problems. If a point 4 program is a good program for us to carry on overseas, it is doubly worthy for us to carry on at home.

II. HISTORY OF FEDERAL ACTION RESPECTING DISTRESSED AREAS

A. Urban areas.

The initial interest in the problem of distressed areas can be traced back to the recession of 1949. There have been persistent subsequent efforts to provide some assistance to these communities, but these steps have been largely temporary and inadequate.

1. The E area program (1949-50).

The executive branch of the Government ordered that aid be given to the E labor market (very substantial labor surplus) by channeling regularly budgeted Federal activities, primarily procurement and construction, to these areas. In all, 62 areas became eligible at one time or another but only 36 shared in the modest consideration. Some observers doubt that any substantial priorities were given these areas.

2. Defense manpower policy No. 4 (February 1952).

This policy was designed for labor surplus communities adversely affected by the cessation of military contracts. In the 85 months through March 1959, contracts amounting to only \$213 million were allocated to these areas by virtue of DMP No. 4.

3. Extra accelerated tax amortization (November 1953).

The program for rapid tax amortization for investments in facilities needed for the Nation's industrial mobilization base was further liberalized first for chronic and later for all substantial labor surplus areas. Through April 1959, only 71 facilities were

located in 38 areas, for an investment of \$318 million, providing jobs for approximately 16,625 workers. This program ceased functioning at the close of 1959.

4. Buy American Act.

American producers supplying goods substantially all of which are produced in areas of substantial unemployment may enjoy a price differential of either 12 or 20 percent depending upon the formula. No data are available on the benefits.

5. U.S. Employment Service.

Since 1949 this Service has helped a number of communities in their developmental activities by providing information on the local labor markets and labor supply but it has been limited by inadequate staff resources.

6. Office of Area Development (U.S. Department of Commerce).

This Office has provided technical pamphlets and statistical studies to all communities seeking help and information to attract new industries without regard to their employment experience.

7. Urban planning grants (HHFA).

Section 701 is designed to aid long-term planning by communities of less than 50,000 population and counties of less than 25,000 population suffering from major natural disasters or rapid urbanization following Federal installations. No special provision is made for distressed areas.

8. Urban renewal (HHFA).

This program aids communities to eliminate slums and blight in predominantly residential areas. No special provision is made for distressed areas.

9. Community facilities (HHFA).

(a) The program for public facility loans may be used by a community of less than 10,000 population for water and sewer systems if it has been denied credit by at least two lending institutions and submits evidence of an ability to repay. No special provisions are made for distressed communities.

(b) The program for interest-free advances for public works planning, which have gone primarily for sewage and water systems, is limited in amount. There is no special provision for distressed areas.

10. President Eisenhower in 1960 set up an interdepartmental committee "coordinate Federal urban area assistance" which is staffed by the Office of Area Development of the U.S. Department of Commerce.

B. Rural areas.

A rural redevelopment program was instituted in June 1955 to increase productivity of low-income farm people; increase prospects for employment in part-time and non-farm jobs by encouraging nonagricultural outlets in rural areas; increase opportunities for young people to secure training; and raise the social and economic standards in low-income rural areas. The primary responsibility is lodged with the U.S. Department of Agriculture.

Appropriations consisted of \$2,061,645 in fiscal 1957 distributed among the Agricultural Extension Service, Soil Conservation, Agricultural Research Service, Agricultural Marketing Service, Farmers Home Administration, and some information and administrative offices.

In the fourth annual report covering the years 1958-59 the Secretary of Agriculture reported that some 200 counties in 30 States and Puerto Rico had been included in the rural development program areas.

In October 1959, the President formally constituted a committee for rural development programs, supplanting the earlier committee which had been operating informally.

Thus the need for rural redevelopment has long been recognized. The program estab-

lished by S. 722, described later in this document, insures that this recognized need will be adequately met.

A Summary and Legislative History of Area Redevelopment—Part 2

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. CARNAHAN. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the text of an article prepared by the Area Employment Expansion Committee on the subject of area redevelopment legislation:

III. LEGISLATIVE HISTORY RELATING TO AREA REDEVELOPMENT BILLS

A. S. 281 introduced in 1949 sought to implement the Employment Act of 1946 and in title V provided specific aids to areas of serious unemployment. After certification such areas would be examined and measures for economic adjustment would be recommended for them. It provided for placement of Government contracts in these areas; RFC loans to private industry; an unemployment emergency reserve fund; retraining facilities; relocation funds; maintenance allowances for trainees.

B. In 1950 a similar measure was introduced, entitled H.R. 7444.

C. Republican candidate Eisenhower in his 1952 speech at Lawrence, Mass., promised to help hard-hit communities.

D. The March 1955 report of the Joint Committee on the Economic Report urged that loans and technical assistance be extended to distressed areas. The committee declared that "we are very concerned with distressed conditions which persist in certain industries and regions, even in an expanding economy. We believe that action is required now and that much can be done through public works to assist these communities. The Federal Government should recognize its responsibility to those areas and industries by promoting research to discover new products and new processes. Consideration should be given to the possibility of modifying the unemployment compensation programs to meet the special problems of retraining and readjusting facing these areas. Loans, technical assistance and, as the President recommends, an expanded area development program should be provided for these areas to help them to adapt to changed economic conditions." The Democratic members of the committee criticized the Economic Report of the President for identifying the problem as a local rather than as a national one. The committee itself declared that "we must recognize and deal with unemployment as a local as well as a National and State problem. The failure of the executive branch to show sufficient vigor in its approach to this problem disturbs us. It should have occupied a high place in the Economic Report." (Statement of supplemental views of Senators DOUGLAS, SPARKMAN and O'MAHONEY, Representatives PATMAN, BOLLING, MILLS and KELLY.)

E. Senator PAUL DOUGLAS introduced the Distressed Areas Act (S. 2663) in July 1955 to provide assistance for distressed areas.

F. The Subcommittee on Low-Income Families of the Joint Committee on the Economic Report recommended in January 1956 that "there be established in the ex-

ecutive branch of the Federal Government a central group with the responsibility of preparing a coordinated comprehensive program aiding currently depressed industrial and rural areas."

G. The President's Economic Report for 1956 reversed its position of the prior year and concluded that the "fate of distressed communities is a matter of national as well as local concern," and recommended special legislation. The report further added that "although these (administrative) programs have proved helpful experience demonstrates that bolder measures are needed. To this end, a new area assistance program is recommended for aiding a community that experienced persistent and substantial unemployment."

H. Senator SMITH, of New Jersey, introduced the administration's bill (S. 2892) entitled "Area Assistance Act of 1956."

I. The Senate in the 84th Congress, 2d session, passed a revised Douglas bill. It was reported out by the House Banking and Currency Committee but it died in the House Rules Committee.

J. Both major parties in their 1956 platforms called for Federal legislation to aid economically distressed areas.

K. In the 85th Congress, Senator DOUGLAS and cosponsors introduced a slightly revised version of the bill considered in the preceding Congress (S. 1433) which was followed by another administration bill (S. 9641). Hearings were held in the first session. A clean bill (S. 3684) was reported out in the second session by the Senate Committee on Banking and Currency. This bill passed the House with some slight amendments and was finally sent to the President at the end of the session. The President pocket vetoed the bill on September 6, 1958.

L. In the 86th Congress, Senator DOUGLAS introduced a similar bill (S. 722) which was followed by the administration bill called "Area Assistance Act of 1959" (S. 1064). After some modifications, S. 722 was passed by the Senate. The House Banking and Currency Committee revised the Senate bill and asked for a rule from the House Rules Committee. The report of the House Banking and Currency Committee was filed May 14, 1959 and is House Report No. 360.

M. The Special Senate Committee on Unemployment Problems conducted a series of hearings on unemployment in many major centers at the end of 1959 and the beginning of 1960. These hearings brought to light the plight of the distressed areas. The recommendations of this special committee can be obtained by contacting the committee in Room 357 of the Senate Office Building, Washington 25, D.C.

N. The Joint Economic Committee conducted an extended series of hearings on "Employment Growth and Price Levels" during 1959. Both the staff and committee reports urged action on distressed areas.

1. The staff report declared that "Federal leadership is needed to assist the recovery of a number of chronically distressed areas. Both technical and local-term financial aid will probably be required. Assistance programs should be of sufficient scope to justify the expectation that the areas will become self-sustaining within a reasonable period. While some nonrecoverable costs may be incurred by the Federal Government in this effort, a well-planned program for reviving the chronically depressed areas should result in a net economic and social gain to the country" (Staff Report, p. xlix).

2. The Joint Economic Committee in its report concluded that "a program of assistance to chronically depressed areas should be started. Both technical and long-term financial aid will be required to help these areas to become self-sustaining and to help themselves. Where necessary, retrain-

ing of workers should be undertaken, particularly where the long-term outlook for an area is poor" (Senate Rept. No. 1043, p. 54).

O. The 1960 Economic Report of the President declared:

"Legislation is needed, however, to supplement and strengthen these efforts to help areas of persistent unemployment create new job opportunities. Such legislation should stimulate and complement efforts of communities to help themselves, should promote maximum participation by private financial institutions and by State and local agencies, should encourage the creation of new job opportunities rather than the mere transference of jobs from one area of the country to another, and should encompass technical aid for the economic diversification of rural low-income areas and single-industry communities."

A Summary and Legislative History of Area Redevelopment—Part 3

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. OLIVER. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the text of an article prepared by the Area Employment Expansion Committee on the subject of area redevelopment legislation:

IV. LEGISLATION: PRINCIPLES AND COMPARISON OF BILLS

A. Principles.

1. To meet the needs of these distressed areas, redevelopment legislation is required. Similar legislation has been adopted for humans in the form of physical rehabilitation and retraining. Physical slums in cities are being redeveloped under the urban renewal programs. The present proposal relates to the need of redevelopment of entire economic areas.

2. The legislation must provide a program broad enough in scope and in the techniques it provides so that it can be of assistance to the variety of communities which have been affected.

B. Comparison of area redevelopment bills.

Provision	S. 722 adopted by Senate	S. 722 House revision	Administration bill
1. Title.....	Area Redevelopment Act (sec. 1)	Same as Senate bill.....	Area Assistance Act of 1959 (sec. 1).
2. Purpose.....	Declaration of purpose (sec. 2)	do.....	Declaration of purpose.
3. Administration of program.....	Independent agency "Area Redevelopment Administration." Administrator appointed by President and confirmed by Senate.	do.....	Commerce Department with Administrator equivalent to Assistant Secretary (sec. 110; sec. 101).
4. Advisory Board.....	1. Cabinet level Advisory Board. 2. 25-man National Public Advisory Committee from all walks of life. 3. Ad hoc industry (including agriculture) conferences (sec. 4).	do.....	Cabinet level Advisory Board (sec. 112).
5. Criteria for area eligibility.....	1. Industrial areas. Shall designate as redevelopment areas those determined by Administrator to have substantial and persistent unemployment for an extended period of time. Designation for labor market areas where the nontemporary unemployment meets 3 conditions: (a) Rate is currently 6 percent, and (b) Rate has averaged at least 6 percent: (1) For 3 out of preceding 4 years and has been 50 percent or more above the national average, or (2) For 2 out of preceding 3 years and has been 75 percent or more above the national average, or (3) For 1 out of preceding 2 years and has been 100 percent or more above national average, and 2. Rural areas: Areas with largest number and percentage of low-income families, and substantial and persistent unemployment or underemployment would be designated, and use percentage of residents receiving public assistance.	1. Industrial areas. Designation discretionary for any area with substantial and persistent unemployment over extended period of time. Designation mandatory for any area with following unemployment levels: (a) 12 percent for 1 year. (b) 9 percent for 15 of 18 months preceding. (c) 6 percent for 18 of 24 months preceding. (d) 15 percent for 6 months if unemployment is not temporary in nature. 2. Rural areas: Areas with largest number and percentage of low-income families and substantial and persistent unemployment and underemployment, and use percentage of residents receiving public assistance. Designation mandatory for any county: (1) Which is among the 500 counties of the United States ranked lowest in level of living of farm-operator families, or (2) Which is among the 500 counties in the United States having the highest percentage of commercial farms producing less than \$2,500 worth of products for sale annually.	1. Industrial areas: Designation discretionary for labor market areas where the nontemporary unemployment meets 3 conditions: (a) Rate is currently 6 percent, and (b) Rate has averaged at least 6 percent: (1) For 4 out of preceding 5 years and has been 50 percent or more above national average, or (2) For 3 out of preceding 4 years and has been 75 percent or more above national average, or (3) For 2 out of preceding 3 years and has been 100 percent or more above national average, and (c) Nonagricultural employment has declined, or has increased less than in the country as a whole, during preceding 5 years. No area shall be excluded by this requirement if unemployment in area for 3 out of last 4 years exceeds 8 percent (sec. 102).
6. Loans for private projects:			
(a) Revolving fund or funds total.....	\$100,000,000 for industrial areas, \$100,000,000 for rural areas.	\$75,000,000 for industrial areas, \$75,000,000 for rural areas.	\$50,000,000 for industrial areas.
(b) Maximum Federal participation.....	65 percent (subordinate to other loans)	Same as Senate bill.....	35 percent (may be subordinate to other loans).
(c) Minimum State or participation.....	10 percent.....	do.....	15 percent (subordinate to Federal claim).
(d) Minimum private participation.....	5 percent.....	do.....	None.
(e) Maximum period.....	40 years (50, if extended)	do.....	25 years (35, if extended).
(f) Purpose of loans.....	Purchase or development of land and facilities (including machinery and equipment) for industrial usage, construction and improvement of plants.	do.....	Same, except cannot be used for machinery or equipment.
(g) Interest rate.....	Rate paid Treasury plus $\frac{1}{4}$ of 1 percent (34 percent to be allocated to sinking fund against losses).	do.....	Rate paid Treasury plus factor to be fixed by Secretary to cover administrative expenses and reserve.
(h) Application approved by.....	Agency of State or political subdivision concerned with economic development (34 local committee in the absence of such agency), and finding by State or agency of consistency with area economic development program approved by Administrator (sec. 6).	do.....	State or agency thereof concerned with economic development, and finding that program is consistent with overall program approved by the Secretary (sec. 107).
7. Loans for public facilities:			
(a) Revolving fund.....	\$100,000,000	\$50,000,000	None. Gives priorities for existing community facilities program to eligible areas.
(b) Maximum Federal participation.....	65 percent (subordinate to other loans)	Same as Senate bill.....	
(c) Minimum State and local participation.....	10 percent.....	do.....	
(d) Maximum period of loan.....	40 years	do.....	
(e) Interest rate.....	Rate paid Treasury, plus $\frac{1}{4}$ of 1 percent (sec. 7).	Not greater than average annual interest rates on all interest-bearing obligations of the United States plus $\frac{1}{4}$ of 1 percent.	
8. Grants for public facilities.....	\$75,000,000 authorization for appropriation (sec. 8).	\$35,000,000 authorization for appropriation.	None.

Provision	S. 722 adopted by Senate	S. 722 House revision	Administration bill
9. Funds for loans:			
(a) Amount	\$300,000,000	\$200,000,000	\$50,000,000
(b) Source	Borrowed from Treasury	Appropriated	Appropriated
(c) Interest rate paid Treasury	Not greater than current average yields on outstanding marketable U.S. obligations of comparable maturities at end of preceding month (sec. 9).	Not applicable	Annual payments based on current average market yields of outstanding marketable U.S. obligations of comparable maturities (sec. 108).
10. Information	Information to be supplied to designated areas and to Government procurement divisions (sec. 10).	Same as Senate bill	Generally comparable provision for advice and consultation with designated areas (sec. 101(c)(1)).
11. Technical assistance grants	\$4,500,000 per year authorization for appropriation (sec. 11).	do	\$1,500,000 per year for designated areas, and \$1,500,000 per year for towns predominantly dependent on 1 industry, small towns which could serve as centers for economic diversification of rural areas of underemployment, and rural low-income areas (sec. 106).
12. Powers	General corporate and administrative powers (sec. 12).	do	Comparable corporate and administrative powers (secs. 111, 116).
13. Termination of eligibility	Provision for termination of designation as redevelopment area (sec. 13).	do	No specific provision.
14. Urban renewal	1. On request of Commissioner, Housing and Home Finance Agency may give financial assistance to municipalities in industrial redevelopment areas without regard to residential requirement. 2. Grants must be within 10-percent limit provided by sec. 110(c) for projects under sec. 110 (sec. 14).	do	On request by Secretary, Housing and Home Finance Agency may give financial assistance to municipalities in designated areas without regard to residential requirement (sec. 103).
15. Urban planning grants	Authorized planning grants to designated areas having population of 25,000 or more (sec. 15).	Grants must be made within 10-percent limit of total capital grants under table I after January 1959.	Same (sec. 105).
16. Vocational training	Increased Federal assistance for vocational training authorized; to be furnished through State vocational education agency where it can provide the facilities and services needed (otherwise, through public or private institutions), except authorization clearly limited to training needed for new jobs in area (sec. 16).	Same as Senate bill	Substantially same, except assistance must go through State vocational education agency (sec. 102).
17. Retraining subsistence payments	Subsistence payments to unemployed being retained and not entitled to unemployment compensation. \$10,000,000 authorization for program (sec. 17).	do	No.
18. Penalties for fraud	Yes (sec. 18)	do	Yes (sec. 114).
19. Restrictions on expeditors and employees	Yes (sec. 19)	Yes	No.
20. Davis-Bacon Act	Yes (sec. 20)	do	Do.
21. Annual report	Yes (sec. 21)	do	Yes (sec. 117).
22. Authorization for appropriations	Yes (sec. 22)	do	Yes (sec. 118).
23. Use of other facilities	Yes (sec. 23)	do	Yes (sec. 115).
24. Records and audit	No	No	No.
25. Federal procurement	do	do	Do.
26. Corporate budget and audit	do	do	Yes (sec. 109).
27. Federal Reserve banks as depositories and agents	do	do	Yes (sec. 113).
28. Public utilities	Restriction on loans or grants to municipality for utility competing with private utility.	Same as Senate bill	

C. Benefits under House bill for redevelopment areas.

	Millions
Technical assistance (annual appropriation)	\$4.5
Public facilities appropriations:	
Grants	35.0
Loans (revolving fund)	50.0
Industrial loans appropriations:	
Rural areas (revolving fund)	75.0
Urban areas (revolving fund)	75.0
Vocational training grants (annual appropriations)	1.5
Retraining subsistence payments	10.0

(As noted, the public facilities and industrial loan appropriations are almost entirely repayable with interest to the Treasury.)

A Summary and Legislative History of Area Redevelopment—Part 4

EXTENSION OF REMARKS

OF

HON. CLEM MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. CLEM MILLER. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the text

of an article prepared by the Area Employment Expansion Committee on the subject of area redevelopment legislation:

V. NEED FOR AREA REDEVELOPMENT LEGISLATION

A. Urban Areas.

1. Unemployment persistently concentrated in chronically distressed areas in good and bad times.

(a) Unemployment persists in chronically distressed areas.

(1) The number of labor markets with substantial labor surpluses (6 percent or more unemployment) fluctuates with the rise and fall in business activity but distressed areas continue with substantial labor surpluses.

Areas of substantial labor surplus (unemployment of 6 percent or more of the labor force)

¹ Recession months between start of decline and return to prerecession levels of industrial production.

Source: U.S. Department of Labor.

(2) The chronically distressed communities (with 6 percent or more unemployment for at least 18 months out of the last 24 months) persist. Even in periods of general prosperity they have substantial labor surpluses. Chronic unemployment is only slightly relieved even when unemployment is low in the Nation as a whole.

The number of chronically distressed labor markets has continued to rise. The recent recession created a new group of chronically

distressed labor markets, because of dislocations in the automobile and aircraft industries.

Labor markets	1957, August	1958		1959		
		January	July	January	May	November

¹ Exclusive of Alaska labor markets.

Source: Area Employment Expansion Committee. These data include more smaller communities than are listed by U.S. Department of Labor.

(b) Unemployment unduly concentrated in chronically distressed labor markets.

The rate of unemployment continues to be unduly high in the distressed labor markets. In November 1959 the total unemployed in the 172 distressed labor markets (exclusive of the 5 in Alaska) numbered 923,000. Though these areas had 13.7 percent of the civilian labor force, they included 25.1 percent of the unemployed. The rate of unemployment in these areas was 9.8 percent as compared with a national rate of 5.3 percent.

Civilian labor force as percent of United States.....	12.9	14.5	13.7
Unemployment as percent of United States.....	17.2	32.2	25.1

(c) Chronically distressed labor markets suffer from substantial labor surpluses for long periods.

The principal characteristic of unemployment in the chronically distressed communities is that the substantial labor surplus continues to fester for long periods of time. Recovery is not quick. Even the labor market which is later graduated out of the distressed condition takes many years for significant improvements to occur. In some areas the relief has come from the outmigration of people and the reinvigoration of existing rather than new enterprises. But where these alternatives are not easily available the recovery is particularly slow in coming. It has taken some communities a decade or two of the most aggressive local action to effect a measurable reduction in unemployment. The reason basically is that the community may have failed to redevelop itself properly to provide the base for a new industry.

Evidence of the length of the time of the persisting substantial labor surplus is provided by the following table, which enumerates the time of the start of the most re-

cent period of continuous substantial labor surplus.

Date of start of last period of substantial surplus	Total	Distressed labor markets		Number with prior period of substantial labor surplus
		Major	Smaller	
1951.....	1	1	0	0
1952.....	18	6	12	0
1953.....	8	1	17	0
1954.....	10	1	9	1
1955.....	11	0	11	1
1956.....	17	1	16	5
1957.....	75	15	60	30
1958 (October or before).....	26	7	19	8
Total.....	166	32	144	45

Some labor markets with more recent starting dates for their chronic distress had suffered prior periods of substantial labor surpluses. The revival was short lived and these communities fell back again into the category of chronically distressed.

(d) Few chronically distressed communities graduate out of classification.

The vague hope that many communities will be able to graduate out of the chronically distressful conditions is not justified by experience. On the contrary, the best available data appears to confirm the conclusion that only a small group of distressed labor markets have lifted themselves to a better status.

Of the total of 116 labor markets which between July 1953 and March 1958 became chronically distressed, only 41 were not so classified in March 1958. Of the remaining 75 labor markets, 64 were continuously distressed from the time their economic difficulties began and they continued unrelieved in this condition of substantial labor surplus. The remaining 11 experienced a temporary period of economic revival.

The 41 labor markets which were not classified as chronically distressed in March 1958 included 19 which had a substantial labor surplus in January or March 1958.

Labor markets chronically distressed, July 1953-March 1958:

1. Total chronically distressed labor markets, 112.

2. Number of labor markets suffering continuous distress from time of origin, 64.

3. Markets which experienced partial revival but chronically distressed as of March 1958, 11.

(a) Chronically distressed in prior period of labor surplus, four.

(b) substantial labor surplus but not chronically distressed in prior period of labor surplus, seven.

4. Labor markets formerly distressed markets but not so classified in March 1958, 41.

(a) Areas with a substantial labor surplus in January or March 1958, 19.

(b) Areas not classified as having substantial labor surplus as of March 1958, 22.

(c) Structural unemployment core of unemployment problem in good times.

Deputy Assistant Secretary of Labor Charles D. Stewart declared recently that "one-third of the unemployed in periods we usually regard as one of full employment fall in this (structural unemployment) category."

2. Chronic unemployment in distressed areas is caused by longrun economic changes.

A. Types of economic changes causing chronic unemployment.

1. Industries have declined because new products or services have captured the markets.

(a) Oil has challenged both anthracite and bituminous coal and has preempted many significant markets.

(b) Diesel power has supplanted steam-power on the railroads with far-reaching effects, seen in the reduction of the number of repair stations and in the amount of railroad equipment built by the railroads and other service industries.

(c) The railroads have lost out to trucks, passenger cars, and airplanes so that number of spur lines has been reduced and the volume of passenger traffic dropped. Employment has decreased.

(d) Synthetic fibers have made tremendous inroads on silk and wool. The former has been practically eliminated except for specialized restricted uses.

(e) The change in the types of refrigerators has resulted in the closing of a number of older plants.

2. Regional migration has denuded older areas of plants.

(a) The migration has been particularly marked in the soft goods industries. Where there has not been any significant migration, the relative rates of growth in various areas has differed strikingly.

In the textile industry, many mills moved South during the twenties. While the number of such shifts has since been small, the rate of attrition has been high in the North, whereas mill closings in the South have been the exception until recently.

(b) The apparel industry has been subject to violent shifts in location since the beginning of the century. The movement out of the large cities to new markets has been frequently recorded. Recently the so-called newer markets and areas have been losing plants to southern locations.

(c) The electronics parts industry, originally located in the large cities, has been standardized so that production units could be moved to outside lower wage areas. Such migration has taken place at an impressive rate during the last decade.

(d) The automobile industry has been highly decentralized as assembly and parts plants have been placed nearer the consumer markets. As growth of the industry has been halted, the older areas have witnessed many plant closings.

3. Some industrial changes result in plant closings.

(a) The amount of subcontracting by the automobile industry resulted in the shutdown of many parts plants.

4. Changing military requirements have left many communities stranded.

(a) Military installations have been closed as the size of the Armed Forces has been reduced.

(b) The substitution of missiles for armed aircraft has had many significant effects.

It has resulted in a severe reduction in the aircraft industry. Some plants have been converted to electronics and become part of the missile industry. The full impact has not yet been felt as increased civilian demands for jet planes has helped fill part of the gap.

The new military defenses require less warehousing and storage facilities, resulting in the closing of depots.

5. Automation and increased mechanization and efficiency have resulted in lower labor demands.

(a) Man-hour productivity is constantly rising. This is effected through mechanization, automation, better management, better materials and standardization of processes. Almost every industry is affected.

(b) Industries in which output is not rising or is declining and yet are experiencing considerable advances in gross productivity are necessarily reducing manpower needs; as witness the textile industry.

(c) New processes may render older plants obsolete and demand a change in the location of the operation as exemplified by the meat packing industry.

(d) Automation will reduce the needs for warehouses, branch offices and shipping facilities.

6. Import competition is accelerating the decline or forcing the shrinkage of some industries.

(a) Imports have captured the markets for some industries such as leather and knit gloves, watches and clocks, flatware, tubular brass plumbing, rope, chinaware. As a result they have caused plant closings in these industries.

(b) Raw material industries have found that lower foreign prices make them non-competitive and some mines have been affected by this competition. These include flourspar, lead, zinc, antimony, copper and iron ore industries.

7. Depletion of natural resources.

(a) Lumber and other raw material product industries have in some areas been affected by sheer exhaustion.

B. Scientific, technical, product, and economic changes will continue.

1. America's investment in scientific research and development is rising. In 1957 it had increased to \$10 billion of which about three-quarters was done by private firms. This research is constantly stimulating new products, new industries, and new consumer demands, rendering older ones obsolete.

2. The rate of man-hour productivity is rising. The National Bureau of Economic Research has declared that "the long-term pace of advance in output per man-hour has been speeded up." The average annual output per man-hour increased, according to the U.S. Bureau of Labor Statistics, 4 percent in 1909-19 and 2.9 percent in 1939-58. The rate for 1947-58 was 3.1 percent.

3. The rate of increase in productivity in many industries is even higher than the national average: candy, 19.8 percent; cigars, 18.1 percent; copper, 10.7 percent; iron ore, 9.4 percent; flour, 7.5 percent; synthetic fabrics, 15.2 percent; bituminous coal, 6.8 percent; railroads, 6.2 percent.

4. Dr. Arthur Burns has concluded that "the life histories of industries are becoming shorter . . . (the) increased birth rate of new products means an increase in death rate of old products and a decline in the average life span of individual industries."

5. The continuance of these changes spells the obsolescence of different parts of our economy and the displacement of workers. Where one or another industry provides a substantial part of the employment, the industry when declining will cause a labor surplus. If the community is itself not immediately ready to fit into the newer industrial and economic trends, it will suffer from long-term chronic unemployment.

C. Industries primarily responsible for heavy unemployment in chronically distressed labor markets.

Area Employment Expansion Committee Fact Sheet 42-A lists the industries primarily responsible for heavy unemployment in chronically distressed labor markets and the specific areas affected.

A Summary and Legislative History of Area Redevelopment—Part 5

EXTENSION OF REMARKS

OF

HON. WALTER H. MOELLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. MOELLER. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the text of an article prepared by the Area Employment Expansion Committee on the subject of area redevelopment legislation:

The industries listed in this fact sheet are: mining: Anthracite, bituminous, flourspar, iron ore, lead and zinc, copper, and antimony; quarrying: limestone; fishing and seafood processing; oil refining; tobacco; textiles; apparel; logging and lumber; shoes; leather; metal and products: fabricated, brass, clocks and watches, air conditioners, refrigerators, textile machinery, electrical equipment, other machinery and railroad equipment; automobiles; aircraft; ordnance; railroads and repair shops; stone, clay, glass, pottery; chemicals; Federal and military installations; shipbuilding; agriculture; construction; natural resources industries.

D. Cycles of major industries in difficulty. The distressed area problem has gained particular attention because of the tendency for adversity to hit a group of communities dependent upon the same major industry at relatively similar periods. The concentrated effect tends to highlight the problem.

In recent years, the contracting cycles have been associated with important American industries.

(1) The reverses in the anthracite and coal industry beginning in the thirties.

(2) The liquidation of northern textile mills in the twenties and fifties.

(3) The closing of railroad repair shops and contraction of railroad employment beginning in the thirties.

(4) The decentralization of the automobile industry during the fifties.

(5) The substitution of the missiles for manned aircraft in the fifties.

3. Communities in distressed and chronic condition of substantial labor surplus.

(a) The communities adversely affected by these economic trends are with few exceptions centers of advanced industrial development. Otherwise they would not have attracted high concentration of population and enterprises. Being urbanized communities they have not only the core industries upon which their development was founded but all of the service and auxiliary developments with which to supply the needs of the people. They are communities in which there are vast investments of private, commercial, and industrial capital.

(b) Most of the distressed communities are dependent upon one or two industries which have suffered reverses. In some there has been a concurrent drop in a number of interrelated industries as has occurred in

the communities dependent upon the automobile industry.

(c) There are among the distressed communities a large number of single industry communities.

There are many other similar communities in the United States. A study of the U.S. Census of Manufactures for 1954 indicates that of the 3,103 counties, there were 1,986 or 64 percent in which the largest 2 companies accounted for 50 percent or more of the manufacturing activity in these counties. The proportion in the counties with less than 1,000 manufacturing employees was 70 percent indicating the high dependence upon two employers.

(d) No community is safe from the above reverses. It is clear that the high dependence on a limited number of industries increases the chances of reverses, but complete diversification is not feasible or economically sound. It is better to deal with the problem in realistic terms of establishing provisions for handling the reverses when they come. There can be no insurance policy against adversities.

4. Migration from distressed areas is no general solution.

(a) It is often quite casually suggested that the solution for the distressed areas is the outmigration of the people to other communities. This well-meant suggestion ignores the difficulties standing in the way of this solution.

(b) Some people do move out of the distressed areas. As a matter of fact there are considerable disadvantages in such outmigration. First, it deprives the community of many younger aggressive and ambitious persons. Second, these people tend to return as they face reverses in the newer communities aggravating the lot of the distressed community at a time when it is least able to face the problem.

(c) There is a large volume of migration taking place in the United States which already taxes our national facilities and skill. There is a movement from rural to urban and from urban to suburban areas and other purely personal shifts. People move for various reasons including the desire for advancement, preferred jobs in terms of wages, benefits and prospects.

Surveys on migration already indicate that each year, 7 percent of the population changes its place of residence across county lines and 3 percent across State lines.

A study of unemployment shows that 10 percent of unemployment is accounted for by voluntary shifts, 20 percent by seasonal factors, 20 percent by new job seekers, 30 percent by structural changes and 20 percent by the mobility of people for personal reasons.

A study of population changes from 1940 to 1950 indicates that 1,051 counties lost population, 1,535 had a stable population and 430 showed a fast rate of growth in population.

(d) The people who are not readily moving are reluctant to move because of the difficulties it would entail either to them personally, their investments or both.

People don't want to move because of their strong attachments, social ties, home ownership, possible losses from the sale of houses, advanced age, fear of distant parts, dependents, fear of adjustment, and differences in ethnic backgrounds. Housing problems may be encountered. Moreover jobs in the new community are tentative and uncertain.

Businessmen and people with investments cannot move easily since their livelihood is often completely tied up with a specific locality.

(e) There are no real shortage areas in the United States. In January 1960 there were no major labor markets classified in group A. The occupational shortages relate to skilled professional and clerical jobs.

(f) The cost of migration is sufficiently high as to discourage workers.

Migration can be of help to individuals, and may assist individual communities where redevelopment will not be adequate to absorb the total displaced, but it is not the answer to the problem of chronic unemployment.

5. Local efforts for redevelopment are insufficient.

(a) Most of the recovery experienced in distressed areas has been due to expansion and revitalization of existing industry or outmigration or commutation, often at very high cost to the individual and community.

(b) The three presently available approaches to redevelopment are inadequate.

(1) "Realtor Approach." This is a common one which seeks to find an employing tenant for existing vacant space.

(a) This approach is inadequate because it relies on existing space which is obsolete and attracts tenants who want low-price floor space. These may not be energetic and expanding companies.

(b) If the tenant is successful, he will want to expand and find modern space. Otherwise, he is likely to close up.

(2) "Diversification Approach." This has been endorsed by the U.S. Department of Commerce and many developers. The purpose is to bring in new industries. This approach may not be economic since there may not be a justifiable base for diversification. Economic advantage may not support it. Diversification is no guarantee against chronic unemployment.

(3) "New Commercial and Industrial Structures." This approach seeks to build a new plant and to secure a tenant for it.

(a) This approach may net a tenant but there is no assurance that it will be sufficient to stop the decline in employment or that the new plant will become the nucleus for new economic growth. Many communities with new plants find that they have no multiplier effect.

(b) Local communities and state groups may exhaust their financial resources to build plants.

(c) Local programs often falter and fail. The reasons for these failings are:

(1) They may lack sufficient funds for the project as resources are drained by their local recession and as tax capacity dwindles. The longer the distress, the more limited are the resources.

(2) They become discouraged at the meagerness of the results.

(3) Local vested groups often resist expansion and the appropriation of funds to pay for it.

(4) The people may become resigned to the patterns of unemployment and underemployment.

(5) Local leadership is often lacking after the major industry leaves.

6. Neglect of distressed urban communities conflicts with Employment Act of 1946.

(a) The act prescribes "maximum employment, production, and purchasing power." The tolerance of chronic unemployment defeats this end. Economic growth depends upon the optimum use of our resources.

(1) The neglect of distressed communities means the deterioration of manpower, entrepreneurial skills and experience; public and social capital; private commercial, personal, and industrial capital.

(2) The development of new communities demands costly investments in new facilities which duplicate existing ones. We already have a tremendous backlog resulting from the unfinished development of our suburbs. The completion of these communities should have a high priority on our capital investment.

(3) Many new or rapidly growing communities already have difficulty in absorbing new population. The cost of facilities is very high.

(4) The conservation and renewal of existing communities through redevelopment is cheaper and wiser, since much of it involves renewal rather than clearance for redevelopment.

(b) Neglect of unemployment areas is costly.

(1) Large scale unemployment means high costs of poverty in the form of costs of relief, unemployment high rate of dependence, slums, social evils, and other problems.

(2) Chronic distress means business bankruptcies.

(3) Disuse brings deterioration of public and private capital.

(4) Low income means deterioration of public services for raising young (low standards of education, hospitals, welfare facilities.) This places a burden on the nation as a whole.

(5) Unemployment spreads pessimism and disaffection.

(6) Unemployment depresses wage scales generally.

B. Rural areas.

1. Rural unemployment, underemployment, and low income widely known.

There is little dispute about the prevalence of rural poverty and underemployment. Studies by the Joint Committee on the Economic Report and the Department of Agriculture highlight these facts.

One of every three commercial farms in this country had in 1954 gross sales below \$2,500. One quarter of the farm families had an annual income of \$1,000 or less.

The greater preponderance of the counties in which unemployment is chronic and in which low standards of living prevail is in the Southern States, particularly Alabama, Arkansas, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia. Additional low-income counties are to be found in Florida, Illinois, Michigan, Minnesota, Missouri, and New Mexico.

2. Characteristics of rural distressed areas.

a. These are communities in which population increases have outrun local resources.

b. Population has increased faster than outmigration.

c. Nonfarm jobs tend to be limited.

d. Farms are small and underdeveloped with low capital investment.

3. Rural redevelopment program is inadequate.

The present program sponsored by the Department of Agriculture is inadequate. It rests primarily upon voluntary cooperation and little or no funds are provided the areas. In the period from 1958-59, the budget provided \$15 million for the Farmers Home Administration for additional local authorizations in the pilot counties or about \$150,000 per county and \$2.6 million for the special services and research activities by public agricultural agencies assisting the program. No funds have been provided for industrial development.

4. Local resources are not sufficient to remove rural poverty.

The National Planning Association declared that "to place exclusive emphasis on private initiative and local initiative is unrealistic and self-defeating. If a century and a half of dependence on local initiative has failed to eliminate America's low-income rural regions, it seems futile to depend only upon such initiative to solve the same rural poverty problems still before us."

5. Rural redevelopment requires outside capital and experience.

VI. RESPONSE TO OPPONENTS

A. Program is not expensive.

Of the total of \$249.5 million provided in benefits, \$200 million is in the form of loans to be repaid to the Treasury with interest. Only \$6 million is called for in annual appropriations; \$45 million is to be a one-time appropriation.

With the reduction of unemployment, various costs will be cut and tax revenues will be raised.

By reducing unemployment in these distressed areas to the national average, the savings on unemployment insurance would more than offset the total cost.

The additional savings in relief, both public and private, will raise the total to more than offset the cost.

B. Bill prohibits pirating of industry.

The bill expressly states that assistance would not be granted "to develop new employment opportunities" which substantially reduce employment in other areas of the United States.

C. Bill is not discriminatory.

The bill is designed to help communities suffering from chronic unemployment. They are a class of beneficiaries affected by structural unemployment. The treatment required by these communities must be different from those affected by a general business letdown.

If we undertake to help communities affected by a national recession, it appears equally proper to help communities which are affected by structural unemployment.

D. Bill upholds States rights.

The bill has been opposed on the grounds that it infringes upon States rights. The bill, however, provides that only applicants approved by an agency of the State or political subdivision in which the project is located may receive aid. Furthermore, the bill prohibits assistance if the project is inconsistent with State and local laws.

E. Bill is not an antirecession measure.

The bill has been opposed on the ground that it is an antirecession measure. This is not the case. The requirement for designation of "industrial redevelopment areas" is that "there has existed substantial and persistent unemployment for an extended period of time." The period varies from 12 to 24 months, depending upon the degree of unemployment, except where the Administrator determines that the principal causes of such unemployment are not temporary in nature.

The purpose of the bill is to deal with the problems of structural unemployment; i.e., where the economy of an area has been weakened by fundamental deficiencies in its industrial structure. A recession may aggravate the problems of such areas but the passing of the recession cannot be expected to solve the basic economic weaknesses from which they are suffering. These will continue unless a fundamental reorientation of their economies is effected. It is toward this end that the bill is directed.

F. Bill encourages private initiative.

The bill has been attacked as socialistic. This is a "red herring" argument which has no validity. Socialism implies a centralization of economic power in the hands of the Government. The bill places the responsibility for initiating and formulating redevelopment plans on local groups approved by the State or its instrumentality. The bill is not a substitute for self-help; it is designed to make it possible for self-help to achieve genuine improvement in the area.

The role of the Federal Government under this program is limited to those functions which local resources are inadequate to handle. By furnishing technical and financial assistance, the Government will seek to make it possible for distressed communities to create a climate in which private enterprise can flourish. This is the very antithesis of socialism.

G. Bill does not obligate the United States by contract in advance of appropriation.

An informal opinion from the General Accounting Office on the question of whether or not the bill authorizes the Secretary of Labor to obligate the United States by contract in advance of appropriations for retraining subsistence payments stated:

"There is reasonable basis for the view that the contractual authority is intended to be contingent upon the enactment of future appropriations. * * * Moreover, it could be argued that the contractual authority of section 16 * * * imposes on the United States obligations so indefinite and uncertain as to bring the contracts within the class of prohibited contracts. * * * Thus the Government would not be obligated in advance of appropriations.

H. Assistance to redevelopment areas is anti-inflationary.

Inflation occurs only when there is a competitive demand for scarce resources. The proposed program deals with areas where there are unused resources and manpower. Their employment does not involve already-utilized resources. Increased production will offset any inflationary pressures. Finally, if there are alternative claims, it is important that the highest priority be assigned to the redesign and redevelopment of these distressed areas for they are major economic cancers in our economy.

VII. POSITIVE FEATURES OF BILL

A. Not a "handout."

The bill has been described as a "handout." Actually, \$200 million of the \$251 million the bill calls for is in interest-bearing loans to be matched in part by State and local funds. An interest subsidy is not provided by the bill. Rather, industrial borrowers are required to pay a premium of one-half of 1 percent above the average interest rate paid by the Treasury on its borrowings.

B. Prevents use of Government resources to drive down wage rates and the standard of living.

The bill insures that wages paid on projects undertaken by public applicants under the bill shall not be less than those prevailing on the same type of work in the immediate locality and will include time and a half for work in excess of 40 hours. This prevents the use of Government resources to drive down wage rates.

C. Flexibility in eligibility requirements. The flexibility provided in the requirements for eligibility under the bill would be advantageous to communities suffering from prolonged unemployment relieved only by a seasonal pickup. For example, the lumber communities of Oregon have experienced prolonged unemployment. They would not be disqualified for assistance because of a seasonal respite in the summer.

D. Subsistences while retraining. Those persons who are undergoing retraining and have exhausted unemployment insurance or are not eligible for it, will receive subsistence payments. Such payments are necessary if the retraining program is to be effective. Proposed funds for this purpose are limited to \$10 million in 1 year.

E. Attract industry by having modern facilities available.

By having modern, efficient plant facilities readily available and calling them to the attention of potential users, the distressed areas will have greater success in attracting industry.

F. Program is based on principles of point 4 program.

The Administration and America have found fit to help underdeveloped, low-income, poverty-stricken and distressed foreign countries. We have spent billions of dollars to help Europe recover from its economic waste following the reverses of the Twenties and the devastation of World Wars I and II. There is no reason why we should not do as well by our own people.

VIII. ORGANIZATIONS WHICH SUPPORT THE LEGISLATION

American Federation of Labor-Congress of Industrial Organizations, Area Employment

Expansion Committee, National Farmers Union, the National Grange, American Municipal Association, Southern State Municipal Leagues and Cities, Conference of Mayors, Local Development Councils, Local Councils and Legislatures, National Planning Association.

He Wants To Go in Business

EXTENSION OF REMARKS

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. LEVERING. Mr. Speaker, the Centerburg Gazette, one of the fine weekly newspapers in the congressional district it is my honor to represent, carried an editorial comment in its March 24, 1960, edition which points up one of the reasons why the conservation reserve, a new version of the soil bank, as proposed by Secretary of Agriculture Benson and the Farm Bureau Federation is unacceptable to farmers, businessmen, and consumer alike. I make this statement even though I believe there is merit in the conservation reserve idea, providing it is properly designed and programmed.

The Farm Bureau-Benson bill suggests amending the Soil Bank Act by taking some 60 million acres out of production over a 3-year period by authorizing payments in cash by the Government of \$400 million for 1961, \$465 million in 1962, and \$530 million in 1963. Many businessmen on Main Street and particularly those who deal in farm implements, fertilizer, seed, insecticides, gasoline, oil, and other goods and services required by farmers, are strenuously opposed to this proposed legislation because it permits the taking of entire farms out of production. Some have gone so far as to suggest that such a law would make "ghost towns" of many small cities in rural areas. It is also believed by those who have carefully studied the Farm Bureau-Benson's proposal would have little or no effect on the most serious aspect of the present farm problem—that of the huge stocks of surplus commodities now held in ships, bins, and warehouses all over the country and the case of wheat alone, costing the taxpayers a thousand dollars a minute. One of the reasons for this conclusion arises out of the fact this proposal provides for payments in cash, instead of in kind as provided by the Levering bill. Payments in kind, as you know, refers to payments in grain and other commodities out of surplus stocks.

Mr. Speaker, it appears to be agreed on both sides of the aisle that by reason of the dire situation on agriculture, particularly among the family type of operation, a new bold and realistic farm program should be adopted promptly to reverse the present trends under existing programs which are fast leading us to conditions as bad or worse than those we experienced in the 1930's. We need

to take action now before the distress in agriculture takes a greater toll on the general economy. But we also know as a practical matter that we must have a bill which will merit the support of all the people—the consumers, which of course includes farmers. In this connection many of our colleagues have frankly stated they cannot get backing from their constituents to vote for the conservation reserve if payments thereunder are to be made in cash, and particularly if the program does not effectively come to grips with the problem of cutting the outrageous cost of storage by disposing of present stockpiles.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the editorial comment from the Centerburg Gazette which dramatizes the policy of paying money to landowners be they farmers or whatever, for doing nothing. The item follows:

HE WANTS TO GO IN BUSINESS

(A reader gave us the following letter that some of you may find amusing.)

To the SECRETARY OF AGRICULTURE.

DEAR MR. SECRETARY: My friend Smith received a check for \$1,000 from the Government for not raising hogs. So I am also going into the not raising hogs business. What I want to know is: What is the best kind of hogs not to raise? I would prefer not to raise razorbacks, but if necessary will just as gladly not raise Poland Chinas or Durocs.

How much will you pay me for not raising 100 hogs? And will the same rate apply if I increase my nonraising capacity to 1,000? Also, will you pay me for not raising 10,000 bushels of corn, which I will not feed to the hogs which I am not raising? Please answer soon, as this looks like a fine year for not raising hogs. By the way, can I raise a couple of hogs on the side, so we can have a little ham and bacon to eat?

The Late Honorable Russell V. Mack

SPEECH

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. SIKES. Mr. Speaker this is a very sad day for the Congress. A distinguished and beloved colleague has been struck down in the discharge of his duties. The strain and pressure under which each of us must work has produced many such casualties in our midst over the years. Others of our colleagues have also paid with their lives after leaving the Halls of Congress for their devotion to the duties imposed upon us. Others have paid in broken health as a result of their service to the Nation.

Our colleague, RUSSELL MACK, was a man easy to know and to admire. He was sound in his views and in his principles. His service here was capable and constructive. His was a loyal and dedicated work which benefited all the Nation.

My earnest sympathy is extended to his widow and his family.

Effect of Federal Minimum Wage and Hour Law on Hotels and Restaurants

EXTENSION OF REMARKS

OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. MOULDER. Mr. Speaker, the following letter is one of the most persuasive and thoughtful statements and explanations I have heard on the effect of placing hotels and restaurants under the Fair Labor Standards Act and setting up a compulsory minimum wage and hour scale for these service establishments:

THE KENWOOD ARMS
MOTOR HOTEL,

Springfield, Mo., February 23, 1960.

HON. MORGAN MOULDER,
New House Office Building,
Washington, D.C.

DEAR MORGAN: As you requested during your stay here at the Jackson Day celebration, I have developed some information concerning the effect of the proposal to place hotels under the Fair Labor Standards Act.

A few of our employees are now making in excess of \$1 per hour on a 48-hour week. A majority are not. However, when we raise the minimum wage to \$1 per hour, this necessitates, of course, a raise in the rate for the more highly skilled employees. In the proposed new rates that we feel we would have to pay, the rates will range from \$1 minimum to \$2.75 maximum for non-executive employees. This compares with the present 58 cents minimum and \$2.40 maximum, excluding from consideration the tip employees who make less in wages but receive gratuities for their services.

Wage rates and payroll costs are extremely important to us because they are our largest single item of expense. In the overall hotel operation salaries and wages will consume approximately one-third of the dollar sale. Moreover, hotels are a service business. Some motels and restaurants have reduced their payroll costs by letting the customer serve himself, but having gone through this trend most operations now find a tendency toward increased services. For example, the Master Hosts Association, to which we belong, requires bell service and room service. This is primarily an organization of very first-class motels.

Automation has had very little effect on this industry. True, there are automatic elevators, radaranges for faster cooking, and a variety of other kitchen aids. However, in the main these mechanical devices are so expensive as to make their costs nearly prohibitive for the smaller operators. Too, at present wage costs, the payout on the equipment through wage savings is too slow to make it practical; but this would not necessarily be the case if wages were raised materially. As an example of the installation costs which I speak of, several years ago I investigated revising the elevators of the Tiger Hotel in Columbia to make them automatic. Using part of the present equipment, the installation was estimated in excess of \$30,000 per elevator. The installation would have saved us about \$2,400 yearly, thus would have paid for itself in 12½ years, assuming no financing charges. Using a \$1 per hour wage rate, that same elevator installation will pay for itself in something over 5 years, and it suddenly becomes an excellent investment. It will, of course, eliminate several operators from our payroll.

I have compared our present wage rates with the projected rates that we feel would

apply if we were put on a basis of \$1 per hour minimum, 40-hour week. Leaving tip employees at their present rates but raising all others will increase the payroll in our rooms department by 28.6 percent, and in our food department by 22 percent. If tip employees are also raised to the minimum wage the rooms department payroll will increase by 48.8 percent of what it is now, and the food department payroll will increase by 35.6 percent.

In a good year, hotels will normally net from 6 to 10 percent of sales before income taxes. It is obvious that with a net profit of this size, they cannot absorb a wage increase of the size indicated above. The situation is even more acute because hotels are suffering declining occupancy rates every year. The big city hotels, who generally are already paying in excess of the proposed minimum wage, are holding their own. But the hotels in the smaller towns are having serious occupancy problems already, and these are the ones that would be primarily affected by these proposals. The occupancy problems that I mentioned can be amply supported by statistics from Horwath and Horwath or Harris, Kerr, Forster; both of which are hotel accounting firms. I am sure that these statistics have been previously presented in testimony by representatives of the American Hotel Association.

The economics of the situation are obvious, I think. Faced with a wage increase of this magnitude that will surely cause a substantial loss at present day sales rates, the hotels would have one of two choices. Increase prices to cover the increase in wages, or eliminate many employees. Assuming that tip employees remain at their present rates, I estimate that it will require a price increase of 10.5 percent and 10.8 percent on rooms and food respectively simply to cover the cost of the increase and maintain departmental profits where they are. If tip employees are included, it will require even more. To maintain wage costs in their same percentage relationship to other costs will require even more. This is a factor not to be overlooked, because costs of other commodities that the hotels use may be expected to increase due to increases in wage rates of wholesalers and retailers who will also be included under this same bill.

With declining occupancy rates the general rule, as I pointed out above, this course of action does not appear to be feasible. Thus, many of the aged and disabled people who work for hotels (and there are many) will, of necessity, be replaced by younger, more physically able people who are more efficient producers. Services will have to be curtailed, and the machines of which I wrote earlier will replace people wherever possible. This is a course of action not to be desired, but one that will become most necessary if minimum wage legislation is extended to cover hotels.

I believe I also mentioned to you in our discussion our opposition to the arbitrary figure of \$500,000 in sales as being the determining factor of whether a hotel shall be included or excluded from the law. It occurs to me that this is a matter that has been substantially overlooked in previous testimony on the bill, and which we believe is highly important.

We are most flattered, of course, to be considered "big business" because our relatively small hotel (125 rooms) will probably exceed the \$500,000 figure in 1960. However, there are several very nice motels here in town that are smaller in size and their sales will not exceed the figure and they will not be included in the bill. The same is true of our restaurant in comparison with other restaurants here in town. A new 100 room motel has recently opened here, but their food department is leased out to a com-

pletely different corporation, so the motel's only income from the food operation is the rental. I know from my experience that it is virtually impossible for that hotel or restaurant, considered individually, to exceed \$500,000 in sales per year. And yet, we will be in direct competition with them and other hotels, motels, and restaurants at wage rates exceeding theirs, which obligation will be imposed on us by law. This does not seem to me to be fair. This one provision of the law creates a discriminatory factor against us, which it will be well nigh impossible to overcome.

I cannot stress too highly that, in the event Congress does decide to extend minimum wage coverage, this unfair provision must be eliminated. If they're going to extend coverage, then it should be to all employers in the industry on an equal basis, and not on a discriminatory basis established on volume of sales. This would most certainly be an inducement to quit expanding anyone's business.

I hope that I have provided you with information which will be helpful to you, and we will certainly appreciate any help you can give us in this matter.

Sincerely,

E. THOMAS MOULDER,
Manager.

The President's Budget, a Political Document

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. WOLF. Mr. Speaker, the January 19 issue of the Madison (Wis.) Capital Times carried an editorial which does much to clarify the folly of the President's budget:

THE PRESIDENT PROPOSES TO LOAD MORE
TAXES ON LITTLE FELLOW

If the public is confused about State finances, it must be utterly mystified about the budget presented to Congress Monday by President Eisenhower.

The President called for a one-half-cent-a-gallon increase in gasoline taxes and another increase in postal rates of 1 cent for first-class mail and airmail.

At the same time he proposes to load these increases on to the average citizen, he announces that the budget will result in a \$4,184 million surplus, which, he says, holds out the hope for a tax reduction next year.

We are sure that the ordinary citizen will wonder with us why it is necessary to increase postal rates and gasoline taxes if it is to result in a surplus to make a future tax reduction possible.

Why not leave the rates and gas tax where they are and let us keep the money instead of the President's promise?

If the President is so anxious for a surplus we suggest that he can get it by plugging some of the loopholes by which pampered interests in this country are evading billions in taxes and are getting rich at the expense of those who will be paying the postal and gas tax increases.

If the President wants to raise more money from the production and use of gasoline he might take a look at the millions the oil interests are getting out of the 27½ percent exemption on their earnings.

The high interest rates his administration fostered have jumped the cost of financing

the national debt to \$9 billion a year—\$12 out of every \$100 paid in taxes. This is second only to defense spending in the amount it takes from the taxpayer.

The big bankers, who had their best year in 1959, get the benefit of this for they buy most of the bonds and the people who will pay the new postal costs and gas tax are paying the higher interest rates.

If the President is interested in postal rates, he might take a look at the second-class mail subsidy under which the big newspapers and magazines are distributing their products at a cost of about \$200 million-a-year to the public.

Figures supplied to a congressional committee showed that the following subsidies were handed to these magazines in 1955:

Saturday Evening Post.....	\$6,069,000
Reader's Digest.....	4,809,000
Life.....	9,494,000
Look.....	3,482,000

The President might show some interest, too, in cracking down on business interests who are piling up enormous "costs of operation" by charging personal living costs and entertainment to corporations and leaving to individual taxpayers to pick up the load.

There is also the need for more personnel to enforce the tax laws and the proposal to apply withholding to dividends, as it is applied to salaries.

These are only a few of the ways that the President can get the surplus he wants, instead of piling an even greater load on those who are already carrying most of the burden.

We Challenge the Future With the Lessons of the Past

EXTENSION OF REMARKS OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech which I delivered at the dinner meeting of the board of governors of the New York State Association of Young Republican Clubs, Saturday, March 26, 1960, at the Sheraton Inn, Binghamton, N.Y.:

WE CHALLENGE THE FUTURE WITH THE LESSONS OF THE PAST

It is a distinct pleasure and privilege for this middle-aged Republican to be asked to speak to this fine gathering of young Republicans from all over the Empire State. The abundance of enthusiasm and spirit that is evidenced here tonight bodes well for the cause of Republicanism in this crucial presidential election year as well as for the future.

It is my understanding that this year also marks the silver anniversary of the young Republican organization. My congratulations to you. Seldom has a fledgling political organization come into existence with less favorable prospects than did yours. Twenty-five years ago, the New Deal and the man who was its chief symbol were indeed riding high. It even looked for a time—when "as Maine went so went Vermont"—as though the Grand Old Party might be headed for extinction. Happily, however, that did not come to pass and one of the salient reasons why it did not was the tenacity and dauntless enthusiasm of those early young Republican founders and members who nurtured this organization into the thriving opera-

tion it now is. By their example, they proved to their elders that there was still plenty of life left in our party, plus the resiliency to come back again and again despite repeated maulings by F.D.R. and the divergent groups he managed to hold together within the Democratic Party.

Now, as you young Republicans pass your 25th birthday and move into your second quarter-century, your Nation is also entering into a new decade—one that promises to be even more changeable and challenging than the last. In a few months, we Republicans will be asking the people to give our candidate for President a new 4-year lease on the Executive leadership of this country, and to return the Federal legislative processes to Republican guidance. I do not think it out of place to say that the very survival of this Nation may well depend upon the success of our appeal.

The major challenge confronting us today is, of course, the persistent and relentless drive of communism toward a unchanged goal—a Communist-controlled world. This threat is real and formidable. It encompasses all fields of human endeavor. It is military, political, economic, and psychological.

Last fall the chief spokesman for the Soviet Union boldly and brazenly presented the nature of this challenge to us as one would throw a gauntlet at a rival's feet. His words were backed by the force of some rather spectacular achievements. This experience undoubtedly served to help shake all of us out of a mood of something closely akin to apathy, and to replace such a mood with one of critical self-analysis, in a too-long-delayed attempt to find out not only where we stood, as a nation, but whither we were going.

Although the first half of that double-barreled question should be the easiest area in which to find common agreement, one will find considerable difference of opinion even as to where we are. From a purely materialistic standpoint, it would seem as though we are in a rather enviable position.

As a people, we have more of almost everything than anyone else, whether we are talking about bathtubs, telephones, or even debts, both public and personal. From a spiritual standpoint, however, I have confessed to a considerable sense of uneasiness, along with many others, when such vexing problems as racial discrimination and juvenile delinquency are viewed by far too many Americans as things we can worry about tomorrow; when the philosophy of a womb-to-tomb security has quite common acceptance as a proper national goal, and when many of our citizens seem more interested in television scandals and tallfins than in such obvious essentials as education and scientific and medical research.

And yet, for all of the more obvious defects that may exist in our way of life, America, with less than 7 percent of the world's population, is looked to for protection, aid, and leadership by almost every other nation on earth—both inside and outside the Iron Curtain.

In 1858, Abraham Lincoln referred to America as "the last, best hope of mankind." If that was true a century and more ago, what would Lincoln say today, as he would see, with us, the growing threat of communism, a billion people under the iron heel of Communist oppressors, and the ravages of socialistic experiments in Great Britain, France, and Italy, to say nothing of the United States.

It is human to pause in gratitude for the blessings that have flowed from our American heritage. In some 183 years, we have managed to attain a greater degree of freedom and a higher standard of living for the great mass of our people than was ever dreamed possible in 10,000 years of recorded history. Our wealth and our industrial ca-

capacity have been the deciding factor in two world wars, though other nations have had as much or more territory, and many nations have had greater natural resources.

What, then, caused this miracle that has been America?

I believe it was due to the vision of the men and women who founded this Republic, and to the free enterprise system of government that they created—a republican representative government unique in all history. Regardless of the commonly accepted definition of a liberal today, I also believe that those early geniuses were the true liberals of the ages—that they were as god inspired as the prophets of the Bible, and that their concepts of Government are as true and as binding today as they were in 1776 and 1789.

Is there an epoch in human history more inspiring or more intellectually absorbing than that in which freedom was launched in our American experiment? Through it we broke the authority of the church over the state, and kept the human mind free to find its own approach to God. We denied the right of the state to tax without the consent of the taxed. We drew a fine line of distinction between the freedom of the individual and the authority granted to his chosen representative. "Freedom is to be a slave to nothing," was the overzealous ambition of the Founding Fathers. Out of it all we set about to place in the hands of Government a minimum of power, and authority only to establish rules of the road over which we were to travel. In no case did we consent to become slaves or wards of Government. The very heart of our delegation of authority was limited to the "consent of the governed." We were consciously concerned with that critical point where our representatives might take over the authority vested only in the voters. This was, in truth, an obsession in the minds of the men who fashioned the Articles of Confederation, and later the Constitution itself. "That government is best which governs least," and "the closer government stays to the people the better the government," was the epitome of their plan, and in their minds such a premise was strong enough to endure the test of time.

These things, plus a belief that individual responsibility is a corollary of individual freedom, are our heritage, and now is a timely moment to stop and ask ourselves if we are worthy of it.

These concepts of government brought to our shores men and women who wanted opportunity rather than security. They still do, even though to many Americans our heritage has become only a cloak of respectability and decency which we wrap around our frailties and our selfishness. These concepts of government, together with the incentive for a man to retain for himself and his children, in the Horatio Alger tradition, the wealth he created, brought forth this hitherto dynamic society of ours and opened new horizons for civilization. They can continue to do so, unless we forget that such ideals, if not zealously maintained, will drift into impotence or even destruction.

The ironic fact today is that we Republicans who would hold fast to these principles—truly the most "liberal" in history—are frequently labeled "reactionaries" by self-styled "liberals"; whereas many of these "pseudoliberals" are diametrically opposed to most of the basic concepts of Washington, Jefferson, Franklin, and the other Founding Fathers.

It is no coincidence that during the past 26 years of which 22 have seen the Democratic Party firmly in control of Congress, we have travelled back a long way toward European paternalism and collectivism, and the farther we travel that road the more impossible it becomes to turn back.

I see this reflected in many of the letters I am receiving from my own constituents,

even though they are, I think, by tradition more conservative in their thinking than people from many similar areas. Taken by and large, it seems quite obvious that to more and more of our citizens Uncle Sam is taking on what a psychologist would call a "father image"—that, to them, our Federal Government should be, and was meant to be, not only the "great protector" but also the "great provider." Riding the crest of this trend, the Democrat majority in this, the 86th Congress, is striving to further expand such a governmental role into areas wherein, no matter how acute the seeming need, we would be creating new Federal responsibilities. I am thinking here of such things as Aid to Depressed Areas; Federal Aid for Education, not just for construction purposes where there is a demonstrable financial need, but for across-the-board construction and even, perhaps, to subsidize teacher salaries; acceptance of the responsibility to pay hospital, surgical and nursing-home costs for social security retirees, and so on. To the proponents of such legislation, the idea that private enterprise or local government has either the incentive or the capability to solve any of such problems is unthinkable.

At the same time, in the field of business, that same Democrat majority seeks to further push the long nose of Government into new areas of decision and control. I am thinking here of such things as a broad extension of minimum wage-and-hours laws far beyond the original intent and meaning of the "Interstate Commerce" clause of the Constitution, establishment of Federal standards for unemployment insurance which responsibility more appropriately belongs to the several States that are cognizant of their own local conditions, and so on. It is as if the proponents of such legislation have forgotten what our forebears knew so well: That any government can become a dictator, not just an umpire, when it tries too hard to control our lives.

Many of the decisions that this and future Congresses will be making will be motivated by a desire to ensure our survival—not only our physical survival in this Atomic Age, which is a story in itself—but our economic survival, and by a desire to "guarantee", as if that were possible by governmental dictate, a rate of economic growth that will exceed or outstrip that of the enemy that has boasted it will "bury" us.

Now survival is not a partisan issue but it is up to the people to decide which of the two approaches toward that goal offers the best hope of longlasting success. In considering such a decision, I submit that the people should take note of the fact that, while we used to refer to ourselves as a free people, we now customarily refer to ourselves as a free Nation. This must mean that, without even realizing it, we have been taking incentive and freedom from the individual and nationalizing those qualities, in a selfish effort to meet our wants as well as our needs, in what may well prove to be a vain grasping for security rather than survival.

The difference between the two major political parties, although blurred at times in military or foreign policy areas, has never been more apparent than it is on this particular subject. I have briefly mentioned the Democratic approach. The Republican Party, on the other hand, stands four-square behind the proposition that this Nation's greatness has come, and can only continue to come from the tremendous God-given strength in each of us that is unlocked when a man is his own master, reaching for his own destiny, with the opportunity to move constantly toward a better life. To restore the American principle of individual and community incentive and thus to mobilize that strength for the Nation's good is the Republican road to a stronger America.

In a sense this means that we must urge the people to consider the Nation's need for a concept of self-denial, something that, admittedly, has no more political appeal than does a snowball in this community that has seen altogether enough snow to last it until next winter. But aren't you growing a little tired of watching too many of the various segments of our economy, of late, led to the top of "Democrat hill" and shown the "promised land" which will be theirs—at the expense of every other segment of the economy—if only they will vote right next November?

There are side aspects of this Democratic approach that likewise cause me concern. During my 3 years in Congress I have seen very few of my Democratic colleagues from areas other than the South who seem to have the slightest awareness of the fact that our national debt is in the neighborhood of \$300 billion and that other built-in obligations of the Federal Government, which will fall due automatically in the not-too-far-distant future, boost that indebtedness to close to three-quarters of a trillion dollars.

And yet how can any legislator who calls himself responsible ignore the fact that the interest on that public debt alone now amounts to over \$8 billion a year—a sum greater than all the income that came into the Federal Treasury as late as 1941 and all Federal expenditures as late as 1936.

In seeking to promote economic growth by the magic of massive injections of Federal moneys into our economy, as most of these same Democratic colleagues of mine say they are willing to do at the risk of creeping inflation, they seem totally unaware of the historically-proven fact that inflation is like an opiate that, in its early stages, may produce a sense of well-being and prosperity but, like any other drug, also requires increasingly large dosages to produce the same stimulation and, after continued usage, produces moral decay, social injustice and eventual economic stagnation. One of the better examples of that sort of social injustice is cheerfully ignored by those who now promote the extension of hospital, surgical and nursing home benefits through the social security system for a minority of our senior citizens, as if that was the sole problem those citizens face, when, in fact, their real problem is how to maintain any sort of a decent standard of living in the face of increasing costs not only for those items but for housing, food, clothing and a modicum of entertainment, under the damper of steadily higher tax rates, Federal, State, and local. Of course, there is a genuine crisis in providing health services to retired persons, but, in treating that alone, we would be seeking only to alleviate one of the many effects of deficit financing rather than trying to diagnose and cure the cause thereof. It's a little like taking aspirin for a cold—the cold sufferer may feel better for awhile, but he still has his cold.

That same Democratic majority in Congress also clings to the obsolete failure of a grim fairy tale that is our farm-subsidy program, under which the American taxpayer shells out over a million and a half dollars every day just to store our harvests of insanity, because to eliminate it and liberate the farmer might be a costly political action.

Did you know that, under this wasteful hodgepodge, your family and mine each owns surplus products worth an estimated \$233.33, including 60 pounds of cotton, 14 bushels of wheat, 21 bushels of corn, 300 pounds of grain sorghum, a fifth of a pound of tobacco, a peck of soybeans, 4 pounds of resin, nearly 5 pounds of assorted dairy products, and 1½ pounds of shelled peanuts?

So you see, the more we lean on Uncle Sam, the greater the habit becomes. All of our Federal programs to "help" someone, or to meet a need that is more fancied than real, start small and end big, and the bureau-

set up to administer them multiply like rabbits and are even harder to kill off.

These are but a few examples of the signposts along the road that we have been following under Democratic guidance since the organization of the Young Republicans 25 years ago. To a considerable extent, each of us, through our own apathy and selfishness may have contributed to our movement down that road, but with courage and sacrifice for the things we believe in we can still reverse our direction.

We can help America reject self-indulgence and demand self-sufficiency.

We can help America return to those principles of thrift, industry, incentive and person-to-person charity which conquered this once hostile continent and made America the goal and the beacon-light for all free men and women, everywhere.

This is your challenge as well as mine. As interested and spirited young Republicans it will be your job to carry a portion of the campaign for Republican candidates this fall. The aid of your feminine members can be most effective not only because they are the best salesman our party has, but also because, for the first time in our history, the women's vote perhaps will outnumber that of men.

This will be a soul-searching year of debate and decision for all Americans. The future of this Nation belongs to you, even as does the future of this party. You will play a great part in shaping both.

Near the beginning of my remarks, I gave you a quotation from Lincoln. I would like to close with another. In an earlier time of decision, not unlike that we now face, he said to the Americans of his day: "It is your business to rise up and preserve the Union and liberty for yourselves, and not for me. I appeal to you again (he said) to constantly bear in mind that not with politicians, not with Presidents, not with office-seekers, but with you (the people) is the question: Shall the Union and the liberties of this country be preserved to the latest generation?"

Ohio's Michael J. Kirwan

SPEECH
OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. LEVERING. Mr. Speaker, I greatly appreciate this opportunity to join with my colleagues in adding a word of tribute to the distinguished gentleman from my State of Ohio [Mr. KIRWAN] in connection with the conferring upon him of an honorary degree of doctor of humanities, by the Oklahoma City University.

I never think of this good man—an honest to goodness self-made man—a fighting man with a heart of gold, who made his way from a breaker boy of 7 years of age, picking slag in the mines, to the greatest legislative body in the world, without taking increased pride in our American system that recognizes the freedom and the ability of the individual. MR. KIRWAN is a living testimonial of this great democracy in which we live.

Because our colleague to whom we pay our respects today did end his formal schooling at an early age, we know that not all education is found in schools. Congressman KIRWAN is a graduate of

the college of hard knocks, where the class colors are black and blue. Long before I was elected to this body, I learned from my father-in-law, Usher L. Burdick, a former Member from North Dakota, that MIKE was a real pillar in the House. I leave it to my colleagues as to whether former Congressman Burdick is a judge of men.

Mr. Speaker, I know of no degree more fitting than that of doctor of humanities to be bestowed on our friend and colleague. Congressman KIRWAN is known to all of us as one of the outstanding conservationists of our time. He, not only champions the preservation of our natural resources of soil, water, timber, and wildlife, but he is on the firing line year after year for the protection of human resources. I will never forget the calm that came over the House on September 8 last year when the gentleman walked into the well on the question of flood control funds in the public works bill and said:

We must remember that we also have a responsibility to take care of our own country. I saw thousands being put out of their homes last January—families with children being held in the arms of their parents in zero weather looking at the water coming in the second-floor windows. I urge everyone here to do something for your country. God gave us this country. God gave us the soil, the rocks, the mountains, the woods, the streams. Let us do a good job protecting and preserving them. Let this be one of the times in history that we do something in and for America.

Mr. Speaker, with all the honors his country has bestowed upon him MIKE KIRWAN is a man of humility. In words suggested by Kipling our friend has walked and talked with Presidents, but never lost the common touch. He can "fill the unforgiving minute with 60 seconds' worth of distance run" and "the earth is his and everything that's in it," because he is a man, my friends.

Cranberry Catsup From Bandon, Oreg.

EXTENSION OF REMARKS OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Ruralite which was reprinted March 21, 1960, in the Coos Bay, Oreg., World. It tells of the ingenuity of Mrs. Paul Colgrove, who lives near Bandon, in my district. Mrs. Colgrove makes diversified use of cranberries. One of her products—cranberry catsup—is described in the following article:

THE LATEST: CRANBERRY CATSUP FROM BANDON

(EDITOR'S NOTE: The following item is reprinted from Ruralite, a publication of Northwest electric cooperatives, with the permission of the Coos-Curry Electric Co-op.)

The community of Bandon calls itself the "Cranberry Capital of Oregon," and

with good reason. Of late, though, there's a further reason for Bandon to lay claim to this title, and this is the birth of a new one-woman industry known as Hazel's Cranberry Kitchen.

Hazel is Mrs. Paul Colgrove, a Coos-Curry Electric cooperative member who lives on the Bills Creek road just out of Bandon. The major product of Hazel's Cranberry Kitchen nowadays is a unique cranberry catsup which adds an exciting dash of cranberry flavor to the flavor of catsup. Taste it and you'll agree there's just nothing like it.

It is not the only cranberry product out of Hazel's Kitchen, for she has been experimenting for years with various cranberry recipes. It is, however, the only commercially sold item, and one which shows a great future.

"I'm convinced there's a good market for it," says Mrs. Colgrove. During the past 3 years she has sold everything she produced. During 1959 she produced about 400 bottles, almost all of which were snapped up by the Coquille Valley Dairy Cooperative for inclusion in their holiday gift boxes. Previously she had sold just about everything locally through advertisements in the Bandon newspaper.

Other products from Hazel's Kitchen include cranberry candy, cranberry pie, cakes, jams, jellies—all with cranberries added in one form or another. All these (and more) items Mrs. Colgrove has entered in the annual Bandon Cranberry Festivals down through the years. "Each year," she says, "I sit down and try to dream up something different."

And this is how the cranberry catsup got its start. Mrs. Colgrove had whipped up a batch of catsup for the cranberry festival.

"Somebody tasted it and said it would sell. That did it. I've been plugging away at it ever since then. In 5 years I've made about 1,000 bottles of it, although I didn't start selling it until about 3 years ago."

The reactions of people have been gratifying, says Mrs. Colgrove. Many helped her perfect the recipe by being unofficial tasters. At first, the catsup was a little too sweet and a little too spicy, the tasters thought. Mrs. Colgrove adjusted the recipe accordingly and has what now appears to be the perfect combination. "The trick," she says, "is to keep the cranberry color in the catsup, and still have the taste of cranberries in it."

Just how this is accomplished is a trade secret, of course. Suffice it to say that your official Coos-Curry Electric co-op cranberry catsup taster tried it, and approves.

Mrs. Colgrove, a vivacious, dark-haired mother of three, comments about the catsup by Dutch Randleman, of Bandon among those that pleased her most: "I didn't put the catsup on nothing," said Randleman, "I just ate it with bread and butter."

Another satisfied customer wrote that the family had never tasted ham so good as when they poured the cranberry catsup over it and then baked it.

A woman declared that "you don't know what a cheese sandwich is until you've eaten one with cranberry catsup."

All of these comments, plus the fact that individuals and organizations such as the Coquille Valley Dairy cooperative are willing to pay hard cash for her product, have encouraged Mrs. Colgrove to the point where she may soon embark on a mass production venture. The one-woman home kitchen method is just a bit tedious (it takes 6 hours of work to produce a case of 12 bottles). Sometime in the near future Mrs. Colgrove hopes to get going on an assembly line basis, and looks forward to an eventual goal of producing 500 bottles a day.

Even so, the catsup would continue to be produced in small quantities at a time, in order to maintain the flavor. The catsup

would probably be produced in a small stainless steel drum.

For the moment, however, the production continues to be on a small scale. Mrs. Colgrove has a number of other interests to keep her busy, including a 4-H rockhounding club, tourist beach trip by jeep during the summer, and her family. Her husband, Paul, is a logger and lifelong resident of the area; their oldest daughter, Colleen (who was queen of the cranberry festival in 1956) is married and living at Greenacres; son Bruce is a 1959 graduate of Bandon high school, and Paula, age 6, is in the first grade of school.

In 1953 Mrs. Colgrove was selected the "woman of the year" in Bandon by the Bandon Women's Civic Club. Her pet project at the moment is beach trips wherein she takes tourists via jeep to little known spots on the Bandon beaches. She does it "just for fun—I've never taken a cent for it because I enjoy going." The tourists enjoy the trip, too. "You have no idea how much it means to them," she says. "And then about this time of year when it gets to storming, they think about us and how much they enjoyed their visit to the Bandon beaches."

It's possible that in the future Bandon may be remembered from its cranberry catsup, too. "I keep thinking how Knotts berry farm down near Los Angeles got its start—in a home kitchen just like mine," says Mrs. Colgrove. Only time can make a future comparison, but meanwhile it's safe to say that the recent cranberry blowup, wherein it was alleged that some Northwest-grown cranberries contained a harmful chemical, has not affected the cranberry catsup industry.

"It was kind of a jolt to some of the growers," Mrs. Colgrove admitted, "but I think that after the smoke had cleared away, it wasn't as hard on the growers as they originally thought. It certainly hasn't made one particle of difference as far as my work is concerned."

Multiplicity of Gas Rate Increases Collected Under Bond

EXTENSION OF REMARKS OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. DADDARIO. Mr. Speaker, under unanimous consent of the House I enter in the RECORD the text of a resolution adopted by the Public Utilities Commission of the State of Connecticut concerning multiplicity of gas rate increases collected under bond:

MULTIPLICITY OF GAS RATE INCREASES COLLECTED UNDER BOND—PETITION AND RESOLUTION OF THE PUBLIC UTILITIES COMMISSION OF THE STATE OF CONNECTICUT PERTAINING TO H.R. 10309

It appearing, that under present provisions of the Natural Gas Act, natural gas transmission companies may obtain rate increases under bond while the reasonableness and need for prior rate increases already being collected under bond have not been determined by the Federal Power Commission; and

It appearing further, that as a result of the foregoing, many Connecticut gas distribution companies are currently purchasing gas under rate schedules containing successive rate increases being collected under bond; and

It appearing further, that H.R. 10309, which has been introduced in the House of Representatives and referred to the Committee on Interstate and Foreign Commerce, would amend the Natural Gas Act by providing that no further rate change may go into effect subject to bond while there is already in effect a rate or charge being collected under bond; and

It appearing further, that adoption of this amendment to the Natural Gas Act would rectify the intolerable situation which has been brought about by the multiplicity of natural gas rate increases being collected under bond, without determination by the Federal Power Commission of the need for such increase, all of which have been detrimental to Connecticut users of natural gas:

Now, therefore, we, the undersigned, comprising the Public Utilities Commission of the State of Connecticut, petition and memorialize Connecticut Representatives and Senators in Congress that enactment of H.R. 10309 should be supported in order to eliminate this patent inadequacy of the Natural Gas Act.

We hereby direct that a copy of this petition and resolution be forwarded by the secretary of this commission to each Connecticut Representative and Senator in Congress.

Dated at Hartford, Conn., this 23d day March 1960.

PUBLIC UTILITIES COMMISSION,
EUGENE S. LOUGHLIN,
HENRY B. STRONG,
BASIL P. FITZPATRICK.

HARTFORD, March 23, 1960.

Attest:

GEORGE J. GRIFFIN,
Executive Secretary, Public Utilities
Commission.

Bishop Howard J. Carroll

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. SAYLOR. Mr. Speaker, yesterday a good and great religious leader was laid to rest. Bishop Howard J. Carroll, whose sudden death last week cut short a brilliant career, is mourned by everyone of all denominations in the area embraced by the Altoona-Johnstown Catholic diocese, and by the many friends and acquaintances that he made elsewhere along the way in the service of God.

The Most Reverend Howard Carroll was a native of western Pennsylvania. One of the many institutions of learning he attended was St. Vincent Seminary, the stately edifice outside Greensburg whence so many noted members of the clergy have come to teach the precepts of the Saviour.

I had the pleasure of Bishop Carroll's friendship, of chatting with him on numerous occasions. He was a quiet, unassuming, modest individual, but of magnetic personality, warmth, and quick humor. Beneath his gentle, almost reticent, outward character was a driving, energetic spirit striving incessantly to accomplish the utmost for his God, his church, his people, and his community. The attitude of this holy man as a neighbor to those of all faiths was effec-

tively expressed in these paragraphs from an editorial in the March 22 edition of the Johnstown Tribune-Democrat:

BISHOP CARROLL

The death of Bishop Howard J. Carroll of the Altoona-Johnstown Catholic diocese, only 2 years after his installation and at the peak of his ability, comes as a shock to this area and community.

The relatively young prelate—he was only 57—came here after a distinguished career in the church. He had taken his doctorate in theology at the University of Fribourg, and subsequently took additional special work in education at the University of Pittsburgh. Among other high positions, he had been general secretary of the National Catholic Welfare Conference in Washington; and was invested as a papal chamberlain in 1942.

Bishop Carroll, during his too brief tenure in this diocese, had begun an ambitious program of new construction and improvements, and his plans for the diocese were far-reaching. Active and energetic, he had raised great expectations throughout the Altoona-Johnstown area. Shortly after his installation, some 3,000 persons, representing various religious faiths, greeted him at the Johnstown war memorial.

At that meeting, Bishop Carroll pledged himself to be a good neighbor to all, regardless of religious beliefs, and to work for a peaceful, happy, and harmonious community—a pledge that he carried out to the best of his capacity. Now the good neighbor and good friend has been removed, and the whole community, equally regardless of religious beliefs, grieves over his sudden departure.

We had looked forward to many years of close association with Bishop Carroll, as he was a relatively young member of the church hierarchy. But we bow to the will of God in His decision to remove a dedicated and unselfish spiritual leader from our midst.

On my meeting with him at his first public appearance in Johnstown, Bishop Carroll whimsically referred to the diocese as his "constituency." While we shall miss him dearly, there is reassurance in the realization that he—in his new exalted position in God's heavenly realm—will keep a watchful eye out for us whether or not we are actual "constituents" of the faith he represented so magnificently.

The Late Honorable Russell V. Mack

SPEECH

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. HOEVEN. Mr. Speaker, I was present when my good friend RUSSELL V. MACK passed into the Great Beyond. This is an experience I shall not soon forget.

It has been a rare privilege and a pleasure for me to have served in the Congress with RUSSELL MACK for so many years. I learned to admire and respect him more and more each day. I shall miss him very much in the days that lie ahead.

RUSSELL MACK was a fine legislator who constantly had the welfare of his constituents and his country in mind. He was a true patriot and a great American. He served well his day and generation.

Death Claims Most Reverend Howard J. Carroll, D.D., Bishop of the Altoona-Johnstown Diocese of the Roman Catholic Church in Pennsylvania

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. VAN ZANDT. Mr. Speaker, on March 22, 1960, in Providence Hospital, Washington, D.C., death came unexpectedly to the Most Reverend Howard J. Carroll, D.D., Catholic bishop of the Altoona-Johnstown diocese in Pennsylvania. The late prelate was enthroned as bishop January 23, 1958, at which time the Altoona diocese was renamed the Altoona-Johnstown diocese.

In the 2 years and 2 months that Bishop Carroll served in Pennsylvania as spiritual shepherd of over 150,000 Roman Catholics in an 8-county area he endeared himself to adherents of his faith and to many non-Catholics by his pleasing and dynamic personality. As a result of the popular esteem in which he was held his death is mourned by people of all religious faiths who extend sympathy to the clergy, members of religious orders and lay communicants of the Catholic church in the loss of a noted churchman and civic-minded citizen.

It was my pleasure to meet Bishop Carroll shortly after his enthronement as bishop of Altoona early in 1958. He impressed me by his knowledge of the needs of the renamed Altoona-Johnstown diocese and talked of social and economic conditions on which subjects he was an authority based on his 14 years of service as general secretary in Washington, D.C., of the National Catholic Welfare Conference.

The death of Bishop Carroll is a source of sorrow and I expressed my sympathy to the Catholic people of the eight-county area in a telegram sent on March 22 to the Right Reverend Monsignor Stephen A. Ward, vicar general of the Altoona-Johnstown diocese.

As a further tribute to the memory of Bishop Carroll, I wish to include in my remarks the following news articles from the March 22 issue of the Altoona (Pa.) Mirror, an editorial titled "Energetic Leader" appearing in the March 23 issue, together with an account of the funeral services on March 28, and a copy of the funeral sermon delivered by the Most Reverend George L. Leech, Roman Catholic bishop of the Harrisburg, Pa., diocese:

[From the Altoona (Pa.) Mirror, Mar. 22, 1960]

BISHOP CARROLL DIES OF STROKE AT CAPITAL—FUNERAL FOR PRELATE TO BE HELD IN CITY—HEAD OF 150,000 ROMAN CATHOLICS WAS UNDER TESTS AT THE HOSPITAL

WASHINGTON, D.C.—Bishop Howard J. Carroll of the Altoona-Johnstown, Pa., Roman Catholic diocese, died of a stroke early today at Providence Hospital here. He was 57.

The hospital said Bishop Carroll was admitted last week for a physical checkup

and suffered a cerebral vascular accident early Saturday. Hospital officials said he failed to respond to treatment and died at 1 a.m. today.

On January 2, 1958, Bishop Carroll was consecrated as the fourth bishop of the Altoona-Johnstown diocese in rites held in Washington's St. Matthew's Cathedral.

BROTHER ALSO BISHOP

During the ceremony, the new bishop's brother, Coleman F., then auxiliary bishop of Pittsburgh, served as junior co-consecrator to Archbishop Amelio Giovanni Cicognani. Coleman F. Carroll since has been elevated to bishop of the Roman Catholic diocese at Miami, Fla.

In his consecration sermon Archbishop Patrick A. O'Boyle of Washington praised the Altoona-Johnstown diocese's new bishop for his 20 years of work with the National Catholic Welfare Conference.

"Few American priests have been asked to shoulder such a heavy load of responsibility," the archbishop said at the time.

ELDEST OF THREE BROTHERS

Howard J. Carroll was the eldest of three brothers who entered the priesthood. Besides Coleman F. Carroll there was Walter Carroll, a monsignor who preceded Howard in death by several years.

Bishop Carroll was officially installed as titular head of 150,000 Roman Catholics in the Altoona-Johnstown diocese on January 23, 1958, in Altoona's Blessed Sacrament Cathedral.

[From the Altoona (Pa.) Mirror, Mar. 22, 1960]

BISHOP CARROLL SERVED HERE FOR ONLY 2 YEARS

Bishop Howard Joseph Carroll, who died today in Washington, D.C., served 2 years and 2 months as head of the Altoona-Johnstown diocese of the Roman Catholic Church.

He was enthroned as bishop of the renamed local diocese on January 23, 1958. He had been consecrated as bishop on January 2 in rites at St. Matthew's Cathedral in Washington, D.C.

He assumed spiritual leadership of more than 150,000 Roman Catholics less than 3 months after the diocese had been renamed to include Johnstown in the title. The diocese embraces eight counties in southwest central Pennsylvania.

Bishop Carroll was the fourth bishop of the diocese, which embraces Blair, Bedford, Cambria, Huntingdon, Centre, Somerset, Fulton and Clinton Counties. His appointment by Pope Pius XII was announced in Washington December 11, 1957.

During his brief reign, Bishop Carroll had been carrying a heavy schedule of work. It included supervision of an unprecedented building program throughout the diocese. These included completion of the Cathedral of the Blessed Sacrament in Altoona and the erection of the new Altoona Catholic High School.

Bishop Carroll went to Washington last Wednesday to consult with a longtime friend and physician. He was advised to enter Providence Hospital for medical tests. His condition, at first not thought serious, worsened last Friday and Saturday.

With him at the time of his death were his brother, the Most Reverend Coleman F. Carroll, bishop of Miami, Fla., and the Very Reverend Francis B. McCaa, chancellor of the Altoona-Johnstown diocese.

A pontifical Mass of requiem for Bishop Carroll will be celebrated at 10 a.m. tomorrow at St. Patrick's Church, Washington, D.C. The body of the bishop will be returned to Altoona following the Mass.

Celebrant of the Mass will be the apostolic delegate to the United States, Archbishop Egidio Vagnozzi. Preacher will be his ex-

cellency, Bishop Lawrence J. Sheehan of Bridgeport, Conn. The archpriest will be Msgr. Paul F. Tanner, general secretary of the National Catholic Welfare Conference.

Other participants will be: Deacon, Msgr. George G. Higgins, head of the social section department of the NCWC, and sub-deacon, the Reverend Francis L. Hurley, assistant general secretary of the NCWC.

St. Francis College will offer a solemn Mass of requiem at 9 a.m. tomorrow for the late Bishop Carroll. Celebrant of the mass will be the college president, the Reverend Columba J. Devlin, T.O.R. The deacon will be the Rev. George Wuenschel, T.O.R., dean of the college. Subdeacon will be the Rev. Anselm Storck, T.O.R., treasurer of the college.

The Mass will be offered in the Immaculate Conception chapel on the college campus and music will be provided by the college chapel choir, under the direction of the Reverend Alfred O. Schendel, T.O.R.

In attendance at the mass will be the Franciscan community, the faculty and student body. Classes will be suspended at 9 a.m. for the mass. The college is in official mourning.

The bishop was a close friend of the Loreto Institution.

Millions of dollars required by the expansion and modernization program of the diocese had been raised in the year prior to the death of his predecessor, the late Bishop Richard T. Guilfoyle, who died June 10, 1957, of coronary thrombosis.

Bishop Carroll, a native of Pittsburgh, was one of the best known prelates in the United States when he was appointed. He had been general secretary of the National Catholic Welfare Conference in Washington since 1944 when he was elevated.

As general secretary of the welfare conference for 13 years, he had taken part in important meetings and conventions in all sections of the country. He had represented the U.S. archbishops and bishops on various occasions.

Bishop Carroll was born in Pittsburgh, August 5, 1902, the son of William J. and B. Margaret (Hogan) Carroll, both of whom are deceased. He was one of three sons, all of whom became priests. In addition to Bishop Carroll of Miami, who was with him when he died, the third brother was Msgr. Walter F. Carroll, who served as papal secretary of state at the Vatican in Rome.

Bishop Carroll attended Duquesne University in Pittsburgh, St. Vincent's Seminary in Latrobe and the Albertinum University of Fribourg, Switzerland. He was ordained in St. Nicholas Cathedral, Fribourg, on April 2, 1927, by the late Bishop Marius Besson of Lausanne, Fribourg and Geneva.

After his ordination, he took his doctorate in theology at Fribourg in 1928 and following his return to the United States took special studies in education at the University of Pittsburgh.

He served as curate in Sacred Heart Parish, Pittsburgh, from 1928 to 1938, and taught philosophy part time at Mount Mercy College, Pittsburgh, from 1930 to 1938.

Bishop Carroll went to Washington, D.C., as assistant general secretary of the NCWC in 1938, a post which he held until named general secretary in 1944. He was third general secretary in the history of the NCWC.

[From the Altoona (Pa.) Mirror, Mar. 23, 1960]

ENERGETIC LEADER

For the fourth time in the 60-year history of the Altoona diocese of the Catholic Church, recently renamed the Altoona-Johnstown diocese, embracing eight counties with Altoona as the Cathedral See, death has sorrowed the large membership. The unexpected passing of his excellency, Bishop Howard J. Carroll, at the age of 57, came as a profound shock when received early Monday morning.

The passing of the spiritual leader of 150,670 members, and its suddenness, has saddened the communities in which he served most efficiently for the past 2 years. At the time of his death he was dedicated to the completion and formal rededication of the Cathedral of the Blessed Sacrament and to the completion of more than a dozen schools in his province.

The Catholic members severely mourn the departure of their beloved prelate, for his activity since his enthronement as bishop on January 23, 1958, has been marked by great advances in Catholicism. He was most energetic, a true leader and most beloved, not only in his church, but in the numerous communities in the eight counties.

Sorrowed for the fourth time since the founding of the Altoona diocese, which established the Episcopal See in Altoona in June, 1901, members are deeply saddened by the death, for Bishop Carroll was in apparent good health, active in his associations until he went to Washington, D.C., for a physical checkup. His death stunned the area.

Messages of condolences have been received from leaders in the church and in government and from prominent officials and citizens, all attesting to his popularity, his ability and his fine leadership.

A pontifical Mass of requiem was held this week at St. Patrick's Church, Washington, with a solemn Mass of requiem for the late bishop being held at St. Francis College. All churches in the diocese will hold a requiem Mass with the final obsequies in the mother church, the Cathedral of the Blessed Sacrament, with the consecration and burial to be made in the bishops' mausoleum in the cathedral.

Altoonans generally mourn the passing of a beloved leader of the church and this community expresses the deepest sympathy in the church's loss.

[From the Altoona (Pa.) Mirror, Mar. 28, 1960]

MANY PRESENT AT FUNERAL FOR BISHOP CARROLL—CATHEDRAL OF BLESSED SACRAMENT IS FILLED TO CAPACITY FOR THE FINAL RITES

The Roman Catholic Church today performed the last rites for the fourth bishop of the Altoona-Johnstown diocese, His Excellency, the Most Reverend Howard Joseph Carroll, who died of a stroke early last Monday in Washington, D.C.

The solemn ceremonies for a prelate of the church were held in the not-quite-finished Cathedral of the Blessed Sacrament, in the completion of which the late bishop had a consuming interest. It was held before an overflow audience of the faithful over whom Bishop Carroll had reigned only 2 short years.

The pontifical mass of requiem was the final act in a mourning period during which thousands of Roman Catholics filed before the prelate's bier at the rectory until Saturday, when it was moved to the cathedral to lie in state.

MANY CLERGY PRESENT

Filling the cathedral for the services were clergymen, not only from the Altoona diocese, but from others through the Eastern United States, as well as representatives from the sisterhoods, many of whom knew the late bishop during his years as general secretary of the National Catholic Welfare Conference at the Nation's Capital.

But the majority were Roman Catholic laity from the flock under Bishop Carroll's spiritual guidance.

Services began at 10 a.m. today with the chanting of the final portions of the office of the dead, the first part of which was conducted at the time of the transfer of the body to the cathedral.

Chanting of the last section of the office of the dead covered a period of some 45 min-

utes, during which the choir sang psalms and the lessons pertaining to the dead were sung by Msgr. Thomas E. Madden, administrator of the diocese; the Reverend Gerald Ream, and the Reverend Richard Hovaneco.

GOVERNOR ATTENDS

Gov. David L. Lawrence attended the last rites for Bishop Howard J. Carroll. He headed a list of public officials which included Mayor Joseph Barr, of Pittsburgh, and Mayor George R. Walter, of Johnstown, as well as Mayor Roy F. Thompson, of Altoona, and the four councilmen. Governor Lawrence flew into Martinsburg Airport last evening and stayed overnight at the Penn-Alto Hotel.

BROTHER CONDUCTS MASS

Celebrant for the solemn pontifical Mass of requiem which followed immediately was the late bishop's brother, the Most Reverend Coleman F. Carroll, bishop of Miami, Fla.

The extremely solemn Mass, which includes the consecration and the Holy Communion, was sung prior to the funeral sermon which was delivered by the Most Reverend George Leech, bishop of Harrisburg, who eulogized the late bishop's service for the kingdom.

Then followed the fivefold absolution by the four bishops who assisted Bishop Coleman Carroll. They were Archbishops John F. Dearden of Detroit, John Mark Gannon of Erie, and Patrick A. O'Boyle of Washington, D.C., and Bishop Emmett Walsh of Youngstown, Ohio.

DISTINGUISHED CLERGY

Distinguished visitors included: Cardinal Francis Spellman of New York City, Bishop Howard Furlong, military vicar of New York; Bishop James H. Griffiths, auxiliary bishop of New York; Archbishop F. P. Keough of Baltimore, Archbishop Karl Alter of Cincinnati, Ohio; Archbishop John M. Gannon of Erie; Archbishop Joseph Hurley of St. Augustine, Fla.

Bishops Edward P. McManaman, auxiliary of Erie; Joseph McShea, auxiliary of Philadelphia; Leo C. Byrne of Pittsburgh; Nicholas Eiko of Pittsburgh, Byzantine rite; Stephen Kociskio, auxiliary of Pittsburgh; George J. Biskup, auxiliary of Dubuque, Iowa; Michale W. Hyle, coadjutor of Wilmington, Del.

Bishops John W. Colmber of Mary Knoll; John J. McGuire, auxiliary, New York; Bishop-elect William Connare of Greensburg; Vincentos Brizgys, refugee bishop of Lithuania who resides in Chicago; Archabbot Dennis Strittmatter; the Very Reverend Adrian Vlegle and the Very Reverend Rupert Langenstein, both of Loretto.

ASSIST IN MASS

Others assisting in the mass included: Archpriest, the Right Reverend Monsignor Thomas E. Madden, administrator of the local diocese; deacons of honor, the Reverends Michael Mackowiak and John Hacala; deacon of the mass, the Reverend Patrick Fleming; subdeacon, the Reverend Eugene O'Malley Bradley; master of ceremonies, the Reverend Roy F. Kline, assisted by the Reverends Edward McConnell and John Lafferty.

After the Mass was concluded early this afternoon, the body of Bishop Carroll was moved to the crypt in the cathedral to lie beside his predecessors of the Altoona-Johnstown diocese.

Pallbearers at the burial were the same who officiated at the transfer Saturday from the cathedral rectory. They were: Jeldo J. Engelisto, Edward W. Garlena, Elias J. Mangiacarne, George Strobert, Jr., Joseph H. Stephens, and Robert J. Nagle.

OPENS WITH PROCESSION

The rites were preceded by an impressive procession of clergy from the cathedral school, across 13th Avenue, to the large gray stone edifice.

First in line were the altar boys, in their cassocks and surplices. Then followed more than 300 priests in the various colorful robes of their offices, followed by the various monsignori, after whom walked 18 bishops. Then came the officiating clergy for the mass.

During the mass itself, the bishops and monsignori sat in the sanctuary and the contingent of priests in the forward rows of seats in the cathedral. Bishop Carroll occupied the episcopal throne, flanked on either side by a knight.

Chaplains for the bishops of absolution were the local diocesan deans; the Very Reverends Charles W. M. White, Thomas Kelley, Joseph A. Banik, J. P. Flynn, Thomas Cawley, and John Hackett and the Reverends Edward Daly and John Palfy.

MUSIC FOR THE MASS

Music for the Mass was sung by the diocesan priests' choir, directed by the Reverend Joseph Krishock.

Black crepe covered the portal and other sections of the cathedral, which will not be finished until late this year. The bishop's coat of arms was the center of black crepe which draped the altar.

Doors to the cathedral were opened at an early hour and the church quickly was filled to capacity.

TEXT OF FUNERAL SERMON DELIVERED BY BISHOP GEORGE L. LEECH, OF HARRISBURG, IN TRIBUTE TO THE LATE BISHOP HOWARD J. CARROLL, AT THE CATHEDRAL OF THE BLESSED SACRAMENT

"Most gladly I will spend myself and be spent for your souls" (2 Corinthians 12, 15).

In the church, as our divine Saviour established it, there is no substitute for the bishop, the authentic and qualified successor of the apostles who is placed in local and immediate contact with the members of the mystical body, of which Christ Jesus is the head.

As our Lord's own vicar on earth, successor of Saint Peter, the prince of the apostles, is the pontiff supreme of the church universal, so, by the free choice, and under the jurisdiction of the supreme pontiff, in the local subdivision of the church known as a diocese, it is the bishop, the local ordinary as he is technically called, who has primarily the power, the authority and the burden of teaching, feeding, and governing the faithful of Christ.

The episcopal office itself, which is of our Lord's own making, is so vastly more important than any one of us poor mortals who are vested with it, that we can speak about it quite impersonally and objectively even while we exercise it. We bishops come and go, but the apostolic office endures and will endure because it is essential in the church of Christ as He established it. There is simply no substitute for the bishop.

This elementary fact is pointedly evident when the bishop of a diocese dies. The chair from which he has taught and fed and governed is vacant. The full functioning of the church is impeded and, as it were, suspended. The age-old law is significant as well as stern, "While the chair is vacant, let nothing be altered."

In the emergency, only what is necessary for the adequate care of the flock is carried on. Interim officials there are, of course, duly constituted, but the full life and mission of the church in the diocese will not be resumed until the bishop returns to the chair in the person of another man bearing the apostolic mandate. Then will revive formally throughout the diocese the spiritual authority and the jurisdiction which it is for the bishop to share or to withhold.

The vacancy of the bishop's chair, therefore, is always an affliction to a diocese. And, when it comes through the loss of a spiritual shepherd of the quality and stature of Howard Carroll, it is an affliction indeed,

and a veritable occasion of mourning. This is the painful plight of the church of Altoona-Johnstown today. And, is there any need on my part to try to express in words to you, the clergy, the religious, and the laity of the diocese, and to you, dear Bishop Coleman, the profound condolence which we of the hierarchy and our brethren are implicitly manifesting as we join with you around the altar in these solemn obsequies.

If we ever had in our ranks an example of head and heart combining to make a servant of God and man, we had it in Bishop Howard Carroll. Servant indeed, with his faith and vision and charity and zeal drawing upon and exhausting his energy in the church and of Nation, and always in terms things that make for the prosperity of of souls.

I should say that his motto might well have been St. Paul's "Impendam et superimpendam"—"I will spend myself and be spent for your souls." And, after all, was not that the bishop's own literal fulfillment of his motto "In nomine Domini"—"In the name of the Lord who washed us from our sins in His own blood." (Apocalypse, 1, 5.)

Yes, head and heart combining, after the pattern of Christ, and driven by a consuming love for God and neighbor without counting the cost—that was Bishop Howard.

Is not that what they saw back in Pittsburgh in his earlier years? Is not that what we bishops saw when he was the servant of all of us in Washington, and what you, the personnel of the welfare conference saw? Is not that which we ordinaries of this province of Philadelphia have been seeing, as he brought his distinguished talents and experience into our common councils? And who has been able to see it more intimately than you, his very own of the diocese, with your phenomenal record of reorganization, of dreams realized, of institutional expansion, of prudent planning, of steady deepening of your sterling spiritual life, all crowded into these 2 short years of diligent shepherding and loyal following in this church of Altoona-Johnstown?

How the heart of Bishop Carroll was poured into the completion of this great Cathedral of the Blessed Sacrament, and naturally so, for it would be the prize and pride of any diocese. Leading his loyal priests and people and building upon the fine achievements of Bishop McCort and Bishop Gullfoyle, and their generations, he spent himself and was spent in fulfilling this dream of splendor for God's own glory and the rightful pride of a believing and generous people.

Here you will come and be at home. Here you will worship. Here your wearied spirits will find inspiration and refreshment. Here you will rejoice to see how the good works of your faith have been turned into a thing of beauty and grandeur before God and man, and, under God, it will be so largely due to the prudent management and the keen esthetic sense of Bishop Carroll.

So much accomplished in so little time, yet so many blessed works whose fulfillment it will be for others to behold. With St. Paul we embrace the adorable will of God today. Truly, "how incomprehensible are his judgments, and how unsearchable his ways" (Romans 11: 33). We bishops come, we bishops go, but the bishop will remain to teach and feed and govern. Each of us in our turn can say with Paul, "I have planted, Apollo watered, but God has given the growth" (1 Corinthians 3: 6). And what does it matter as Bishop Carroll himself would often say, as long as the saving mission of Christ goes on and the sheep and the lambs are fed.

God rest our beloved Bishop Howard. Was it not a grace and a joy to have him as father and brother and neighbor and friend? To all of us he is a loss, a painful loss. But, brethren, in the household of the faith is not suffering our Christian heritage and in-

strument, as we "fill up those things that are wanting in the suffering of Christ?" (Colossians 1: 24) The holy will of God we embrace, therefore, and, in the light of the faith we live by, we pray with St. Paul, "Blessed be the God and Father of Our Lord Jesus Christ, the father of mercies and the God of all comfort, who comforts us in all our afflictions" (2 Corinthians 1: 3, 4).

May the angels lead thee into paradise. May the martyrs welcome thee at thy coming, and lead thee into Jerusalem, the Holy City. May the choir of angels receive thee, and mayest thou, with the once poor Lazarus, have rest everlasting" (Rit. Rom.).

The Correct Pronunciation and the Origin of Oregon

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. PORTER. Mr. Speaker, the correct pronunciation of the name of the State in which I was born and raised and part of which I now represent in the House of Representatives, is Orry-gun, not Orry-gawn.

Two years ago when we were out at the Naval Gun Factory and the Sea Chanters with the Navy Band were making a stirring rendition of our State song, I told them to remember that they were in a gun factory to manufacture a few guns when they pronounced the name of my fair State.

Where did the name Oregon come from? Where did William Cullen Bryant learn of this word when he wrote "where rolls the Oregon?" Under a previous consent I am including an editorial from the Albany Democrat Herald and an Associated Press story from the Grants Pass Courier both of which shed some light on the origin of the name Oregon.

[From the Albany Democrat Herald, Mar. 1, 1960]

WE STILL AREN'T SURE

Origin of the name "Oregon" has thus far been undetermined authentically. Until recent years the source was believed to be Spanish, from the word "Orejon" or "Oregones," Spanish names for big-eared men. If this had been true the term must have alluded to some big-eared Indians found by Spanish explorers in what is now Oregon.

Another suggestion was that the origin may rest in the word "Origanum," name of a wild sage found in this State. In Chinese Tartary is a river named Oregon, which could have been picked up by early American or British adventurers in the wilds of the Pacific Northwest.

It had also been thought that Oregon may be a modification of the Shoshone Indian word "Oyer-un-gen," meaning a place of abundance; of "Aura Agua," meaning in Spanish gently falling waters; of the French word "Ouragan" for hurricane or of "au-re-gan," Algonquin word for "beautiful water."

A University of Oregon assistant professor of history, Prof. Vernon F. Snow, has now come up with a somewhat different theory on the background of "Oregon."

His research into etymology of Indian

words has convinced him with reasonable certainty that Oregon is of Indian origin. He has found that "auragon" was the name of a dish that Indians made out of birch bark, and surmises that these vessels may have been used in trade between Indians of the interior and of the North Pacific coast. "Auragon" is quite similar to the Algonquin word "au-re-gan" in form and sound though not in meaning.

Professor Snow recounts how in 1765 a Maj. Robert Rogers used the name "Ourogan" to designate a river he suggested to King George III might be linked with other waterways to make up the much sought-for Northwest Passage, for which explorers of that era were continually searching. In subsequent letters he spelled it "Ourigan" but his associate, Jonathan Carver, wrote in 1778 of "the river Oregon, or River of the West," speaking undoubtedly of the Columbia. And then, of course, everyone knows that William Cullen Bryant must have been thinking of what we know as the Columbia, when he wrote "where rolls the Oregon."

Whether Oregon was derived from the Algonquins, Crees, or Shoshones, we can agree with Professor Snow that logic if nothing else points to the source of our State name as Indian, though it is hard to understand why the Columbia River, at least, did not retain whatever name by which it was known to the Indians who navigated it.

In any event we suspect historians will look askance at the theory offered at the 1959 Albany First Citizen Award banquet. For benefit of the guest speaker, Senator JOHN KENNEDY, his introducer ascribed the name to "that great Irish patriot, Mike O'Regan."

[From the Grants Pass Courier, Feb. 27, 1960]

INDIAN WORD FOR BIRCHBARK DISH BELIEVED ORIGIN FOR STATE'S NAME—DEBATED NAME SOURCE THOUGHT SOLVED

PORTLAND.—Vernon F. Snow, assistant professor of history at the University of Oregon, thinks he has determined the origin and meaning of the word "Oregon."

The source of the word long has been debated.

Snow believes the word was commonly used by Indians in central North America in the 17th and 18th centuries to mean a dish or drinking vessel made of birchbark.

Writing in the Oregon Historical Quarterly, he cites:

A report by LeJeune, a French missionary, in 1633 that the Great Lakes Indians "cooked their meat in bark dishes which they called ouragans."

Another Jesuit later in the 17th century wrote that the Indians of the upper Mississippi Valley "eat from an ouragan that is seldom clean or washed" and "drink from an ouragan that is usually quite greasy."

The word was used by Cree Indians and other tribes of the Algonquin family all the way from the Alleghenies to the Rockies.

Snow said Maj. Robert Rogers, leader of Rogers' Rangers, probably first used it as a place name, writing in 1765 for permission to explore westward to "the river called by the Indians Ouragan."

How the word came to be applied to the river, Snow does not know.

"Perhaps the birchbark dish was a trading commodity between the natives of the Mississippi Valley and those of the West."

"Perhaps the Indians referred to the birch-lined valley of the upper Snake River or the bowl-like Jackson Hole. Perhaps some striking physical characteristic or configuration of the western river or its valley resembled an 'ouragan.' Or perhaps the native contemporaries possessed reasons for naming the river which defy historical analysis."

"Yet our ignorance of the Indian's mind and its inner motives does not mean that he lacked an explanation," Snow said.

Has Inflation Been Checked?

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. BOSCH. Mr. Speaker, the battle against inflation is one of the most important before us if this Nation is to remain economically strong. This is a matter of direct concern to every citizen of the United States and indirectly affects a great many people all over the world.

Under leave to extend my remarks, I include an editorial from the U.S. News & World Report of April 4, 1960, on the subject of inflation, which I commend to the attention of my colleagues:

HAS INFLATION BEEN CHECKED?

(By David Lawrence)

For several years now many people in America who believe in a sound economy have been waging a battle against inflation. In simple terms, inflation means an artificial pressure to raise wages and consequently to raise prices. This causes the purchasing power of the dollar to go down and imposes hardships on pensioners and others who live on fixed incomes.

Some segments of the working force can get their wage scales moved up faster than others. Those who lag behind feel the pinch. Similarly, prices cannot be immediately raised by some businesses, and during the interval of transition they suffer losses.

The Eisenhower administration—inheriting an inflation forced by World War II and then by the Korean war, which ended in 1953—was not able until after several years of readjustment and recession to begin its main fight against inflationary pressures. The demand of the President in December 1958 for a balanced budget won wide acclaim throughout the country as the Nation started to realize that the time had come to get its finances in order.

Despite the predictions of disaster made during the 1957 recession by the "spenders" in Congress who advocated larger outlays by the Federal Government in the face of a \$12 billion deficit in the budget, the administration weathered the storm. A budget surplus now is in sight for the coming fiscal year, and the outlook is for a stabilized economy.

The word "stability" is little appreciated in the precincts of the politicians. The talk is either of a "big boom" or a "deep recession."

There is nothing static, however, about stability. Actually, it means an opportunity for a steady expansion and a widening of economic markets. It could mean enlarged profits through the sale of an increased volume of goods that the average man can afford to pay for out of his income.

"Stability" is not as familiar a term as "prosperity" in modern politics, but it can have a much more far-reaching effect on the Nation's economy. A period of stability could be more lasting than a "boom" because it is built on a sounder foundation.

What are the prerequisites to a period of economic stability in America? Plainly, the most important requirement is a sense of restraint with respect to prices and wages.

Fortunately, the consumer has a veto power against higher prices. He merely refuses to buy what he can't afford now and what he cannot eventually pay for out of his income. Installment-buying may help cer-

tain sales temporarily, but inevitably, if incomes are not increased, the sales of products suffer and the consequences are widely felt.

It is, therefore, essential that, more than any other factor, the wages of the American worker should be given equitable consideration. He cannot be expected to work indefinitely at the same wage when profits continue to increase. He cannot be expected to pay the rising cost of medical care or live on a pension unless weight is given to what sometimes are called "fringe benefits."

American management has shown an enlightened attitude toward progressive increases in the workers' income. The tirades of the union leaders too often give a misleading impression that businessmen are all selfish individuals without human feeling.

But the facts show that this is a misguided and erroneous impression and that, while there are exceptions to all rules, the tendency of the businessmen of the country on the whole has been to go along with steady increases in wages as long as the public is able to absorb the higher wages as reflected in the cost of goods offered for sale.

Today, however, prices have risen to a point beyond which it may be dangerous to go increasing wages without substantial increases in the productivity of labor. Foreign competition in several categories has begun to threaten American products in our markets.

Many analysts are saying that "inflation is over." What they really mean is that, logically and on the basis of sound economics, it ought to be over.

But has inflation really been checked? The answer must be sought not from economists but from the politicians and the labor-union leaders. Have they abandoned the drive they have been making for higher and higher wages without regard to what happens to prices and consumer resistance?

The kind of Congress elected next November means a great deal to the business future of America. Labor-union leaders do not hesitate to collect big sums to influence voters. They seek a majority in Congress to do their bidding—to increase the power of the labor monopoly and to increase Government spending.

Has inflation been checked? Will there be a period of economic stability? Or are we headed for a crash to be brought on by the reckless demands of the forces of organized greed?

These are questions still unanswered.

Mother Marie Gerard

EXTENSION OF REMARKS

OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mrs. KELLY. Mr. Speaker, the death of the mother general of the Sacred Heart of Mary was a shock. It is a loss to the community of which she was the superior general—a worldwide institute of learning for girls. This world-renowned institute was furthered by her foresight, determination, and valiant efforts. Her philosophy was based on the meaning of true patriotism in an understanding of all peoples. This international movement is now a phenomenon of the present day, Mr. Speaker, I would like history to record

the efforts of one who sought to achieve that which all of us are attempting to achieve in this era—the international understanding of people.

The death of the Very Reverend Mother Marie Gerard is a personal loss to me, not only because of the close bond of love I held for her and hold for the entire community of the religious of the Sacred Heart of Mary, but also, I humbly admit, much of the understanding that I, my sisters, and my daughter possess was developed under the training of the members of this community.

Under leave to extend my remarks in the RECORD, I include the following article:

MOTHER MARIE GERARD

TARRYTOWN, N.Y.—Very Rev. Mother Marie Gerard Phelan, 88, superior general of the worldwide Institute of the Religious of the Sacred Heart of Mary, died here early Tuesday after a short illness.

Born in Kilkenny, Ireland, in 1872, Mother Gerard was received into the congregation in 1893, and served as Headmistress of Seafield Convent of the Sacred Heart of Mary in Liverpool, England, before coming to America to aid Mother Marie Joseph Butler in founding Marymount's Tarrytown school in 1907. She became a naturalized citizen in 1928.

Thereafter she served as dean and later president of Marymount College. She was also named successively superior and provincial of the Institute's North American Province, established in 1877 with the founding of the order's first American school at Sag Harbor, Long Island.

In 1946, Mother Gerard was elected superior general at a general chapter of the Institute at Beziers, France, to succeed Mother Butler who died in 1940. She was reelected to the office in 1952. Mother Gerard was the sixth superior general since the congregation's foundress, Mère St. Jean Cure-Pellissier.

Widely known as an outstanding educator and administrator, Mother Gerard received her Ph. D. from Fordham University in 1922. She also pursued studies at Oxford, the Sorbonne, and Catholic University of America.

In 1952 she was awarded an honorary LL.D. from Fordham University as the first of its graduates "to be called to the government of a religious order spread over many parts of the world."

Working closely with Mother Butler, she revised in 1937 the entire course of studies for Marymount schools in order "to integrate it more realistically with women's enlarging sphere of activities in a rapidly changing society."

Under Mother Gerard's guidance, the congregation expanded its educational activities in America and throughout the world, establishing 28 schools and colleges in Bogota, Medellin and Barranquilla, Colombia; Barcelona, Spain; London, England; Umtali, Africa; Dublin, Ireland; Fatima, Portugal; Montpellier, France; Porto Alegre, Brazil; San Francisco and Los Angeles, Calif.; Richmond and Arlington, Va.; Quebec, P.Q.; Cuernavaca, Mexico; St. Louis, Mo.; and Miami, Fla.

In 1947, centenary of the congregation's founding, Mother Gerard supervised the establishment of Marymount College's City Campus in New York's former Junior League building at 221 E. 71st Street.

The congregation now operates 145 schools and colleges in 11 countries. In New York City and environs alone, there are 13 educational establishments administered by the religious order.

During Mother Gerard's administration as Superior-General, the causes of beatifica-

tion of Pere Gallhac and Mother Butler were formally proposed at Rome to Pope Pius XII. Shortly after his elevation to the Pontificate, His Holiness Pope John XXIII assumed the title of Cardinal Protector of the Institute of the Religious of the Sacred Heart of Mary.

As the congregation's executive administrator, Mother Gerard was active in her duties until her final illness. At her death she was engaged in planning further expansion of Marymount for her congregation.

Solemn funeral services for Mother Gerard held at Marymount-Tarrytown's Butler Memorial Chapel on March 25, at 11 a.m., Cardinal Spellman presided. The body will be interred in the crypt beneath the chapel, which also contains the body of Mother Butler.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

Poisons—The Creeping Killer

EXTENSION OF REMARKS OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article entitled "Poisons—The Creeping Killer," by Arthur H. Carhart as reprinted from Sports Afield for November 1959:

POISONS: THE CREEPING KILLER

(By Arthur H. Carhart)

Warning: Your future hunting and fishing are in jeopardy.

Probably that statement doesn't faze you. You've heard it when legislatures try to raid game and fish funds. Or when an industry pollutes a stream. Or when a Government agency encourages a big drainage project.

You've heard also about new, fantastic poisons spread over land and water to "control" weeds and insects and that these poisons kill fish and game. Of course—everyone knows DDT, 2,4-D, chlordane and a lot of other insecticides, herbicides, rodenticides, fungicides, homicides—

Hey. Homicide means killing human beings.

It sure does, podner. Probably you just haven't collided with the grisly fact that poisons killing wildlife can kill you. You're interested? You better be interested.

You don't know the total effects of the widespread poisoning of weeds, insects and such? Don't be self-conscious about it. Nobody else does either. Nobody knows for sure how ghastly destructive many of these poisons can be. Scientists do know some of these killers can be thrown off fairly readily if less than a killing dosage is taken at any one time. They also know that other poisons are accumulative. A tiny bit each day can stack up in your system. And one day it becomes a lethal quantity.

Shall we dig deeper into this poison problem? OK, let's dig.

Let's stick to probing first what happens to wildlife when poison hits the land and water. What might happen to you, your kids, your neighbors is reflected in what these poisons do to other living things.

Half a century ago, the limited types of sprays and dusting put on fields and orchards posed no gigantic threats to life. Modern poisons, with fearful and tenacious potency, came along about the time of World War II.

Sodium fluoracetate, commonly known as 1080, was among the first of these poisons to be put in action. I tried it out before it was generally available, on white-footed mice. Then I heard of a man in Montana who used 1080 to kill rats in his granary. His three valuable dogs died after eating poisoned rats. I heard also of a family in California that had feasted on meat from a bear shot while still alive. But earlier the bear had fed on carrion of an animal in which 1080 was present. Tasteless, and odorless, and al-

most indestructible, 1080 gave no warning to those who ate the bear meat tainted with the poison. Several people died.

I got so scared of this poison that I burned all of the remaining poisoned grain and went back to traps as a means of mouse control. I'm still scared of 1080. That stuff is deadly. There is enough poison in 1 ounce to kill 50,000 rats, and enough in each dead rat to kill a dog.

Now let's consider the case of 1080 and the Klamath Basin geese.

On Sunday, March 9, 1958, the Portland (Oreg.) Journal carried headlines that shouted "Poison Kills Wild Geese in Tule Lake Area." The famous Tule Lake Federal Wildlife Refuge is in that general area. It is a place where migrating waterfowl in flight between Alaskan nesting grounds and Mexican waters stop to rest and feed.

A few days later another headline, another story by Tom McAllister, the Journal's outdoor editor, told of another poisoning of migrating geese. This time the known kill, tallied by wildlife officials cruising fields where birds had died, amounted to 2,500. The first 500 were killed by 1080. The second kill was by another "rodenticide," zinc phosphide. How many birds, beyond the 3,000 dead ones tallied, flapped away to die somewhere else is anybody's guess.

How could such a calamity happen? Well, here's how.

In the late winter of 1958 the field mouse population in Klamath Basin "erupted." There were so many mice they were causing severe damage to grain crops. A sort of hysteria seemed to start up among those concerned with this problem.

Without reckoning all consequences, the poisoning campaign went into high gear.

An estimated 65 tons of poisoned grain were bought from local agricultural supply stores. It was showered on mouse-plagued fields from an airplane or by a mechanical spreader. With a singleness of purpose they spread that poisoned grain—if a little was good, gobs of it would be better.

Of the 3,000 geese known to have been killed in Klamath Basin in March, 1958, 75 percent were snow geese, 20 percent were white-fronted geese, and 5 percent were Ross' geese—"plus an undetermined but lesser number of dark geese."

I have seen 1080 in use, and I've noted its effects on livestock ranges of the West.

In 1915, Congress cleared the way for the old Biological Survey to carry on a campaign against wolves, coyotes, and other varmints alleged by stockmen to be killers of sheep and cattle. Wolves have disappeared from almost every last pocket of wild country in the West. Coyotes have been all but rubbed out over vast areas of plains and mountains. Legislation devised by livestock interests allows herds and flocks of domestic animals to be taxed to provide a special fund, and money so collected is combined with Federal appropriations in a "cooperative fund" to underwrite the continuing poisoning on western range and forestlands.

The wolves had been killed out by the time 1080 arrived on the scene. Coyotes had learned about guns, traps, and strychnine in pellets of fat, and they were increasing. This poison, 1080, plus a deadly device named the "Coyote Getter," stepped up the campaign against the little wolves until few people now hear that eerie music of the coyote's hunting song at moonrise.

The old-time wolfer matched traps, guns, and wits with his quarry. With 1080 and the Coyote Getter the pattern of attack changed. It was possible to travel by truck or jeep on back-country roads and throw out a string of poison stations or a few score of Coyote Getters and really wallop the predators.

In addition to coyotes and their kind, what did the new poisons do to other wild species?

"Few other animals or birds are killed by our poison stations," say those in charge of this activity. "We enforce rigid control of poison stations."

So? I submit a photograph I took only a short time ago.

In the foreground is what's left of a dead horse. It was placed there the previous autumn or early winter. On the fencepost is a tattered warning sign. It is illegible but a sign is required to warn all comers that poison is at large in the vicinity. Beyond the fence is the residue of a horse carcass a year older than the one seen in the foreground, and beyond the second is an even older stack of bones, hide and effluvia of a third dead horse placed there to set up a "poison station."

Also in the foreground is the carcass of a bobcat. It dropped dead after feeding at the "freshest" dead horse.

I showed the photo to officials engaged in the predator "control" program. "Of course," they remarked, "you may find these old carcasses where they were placed. They are only lure bringing in curious predators. The poison is inside fat pellets placed adjacent to the dead horse. Field men go the first thing in early spring to gather up every poisoned bait there."

For some reason the bobcat didn't know that. He located poison, somewhere. Fact is, a friend, whose truthfulness is absolute, told me the horse had been killed by bleeding, and as it had died, as blood drained from an artery, a solution of 1080 was fed into a vein of the horse to be pumped to every part of the body before the heart failed.

The Coyote Getter is a metal tube, about half an inch in diameter, which is driven into the ground. A .38 caliber cartridge containing a dose of sodium cyanide instead of a lead bullet is placed in the upper end of the metal tube. A piece of animal hide doped up with fetid scent stuff is fastened over the exposed top of the tube. With the trigger set, anyone or anything touching that stink-wad of hide, or sometimes cotton, will explode the cartridge. The coyote is supposed to open his mouth carefully close his jaws exactly over the scent wad, and the cartridge is supposed to blow cyanide into the coyote's mouth. Often it does.

Valuable dogs have been killed, livestock have licked the scent wad and died, and at least one report tells of a trapper accidentally exploding one of these Coyote Getters, and although he survived, he was crippled. What it could do to a curious youngster on a Boy Scout hike gives you shudders.

In 1941, the F. & W.S. issued Research Bulletin No. 4, titled "Food Habits of the Coyote." It summarized the foods found in 8,263 coyote stomachs, collected from Michigan to the Pacific Coast and analyzed by the Denver Laboratory of the Section of Food Habits of the Division of Wildlife Research.

On a year-round basis this is what coyotes had eaten: Rabbits made up 33 percent,

carrion 25 percent and rodents 18 percent. Coyotes' stomachs examined contained 13 percent of sheep and goat meat. That particular percentage could be questioned. The stomachs examined came predominantly from where trapping and poisoning had been going on; where sheep were being grazed. Out of the 8,263 stomachs reported, 7,520 were from 11 public land States of the West, where sheep graze on permit issued by the Federal Government agencies. Lesser percentages of the food coyotes ate were: deer 3 percent, birds 2 percent, insects 1 percent, and other animal matter 1 percent. Within the past few years, the California State Game and Fish Department ran similar tests on coyote food habits. The general pattern of food taken was that demonstrated in the F. & W.S. study.

A real shocker to most livestock people occurred when the Toponas Cattleman's Association put up signs protecting coyotes on their grazing areas. It now is the Toponas Grassland Protective Association. A sudden realization that gophers were ruining the meadows in high mountain valleys hit the Toponas community. Coyotes eat a heap of rodents. Better have coyotes than rodents. Now other stockmen's associations have taken the same biological approach to gopher control in the mountain pasture country.

These records of poisonings in the West are only a mild introduction to poisoning programs, more deadly, more widely spread. Death has run rampant in some locations, with public agencies responsible for unleashing vast quantities of the most lethal poisons we now have. They don't kill only the things they are aimed at. They kill, and kill, and kill, anything alive.

You know about DDT? Sure you do. Who doesn't know that old standby bug killer? You can buy it anywhere. Kills insects, doesn't it?

It does kill insects—and can kill most every type of living organism. This poison lurks, and sneaks in on its victims, and unlike the lead bullet, it spreads an enveloping blanket of death.

DDT kills sunfishes when it is 1 part of poison in 2 million parts of water.

When DDT is applied to waters, or to lands from which rain may wash it into streams and lakes, the smaller life, the little organisms that are the first link in the chain of aquatic life die.

DDT paralyzes crawfish in doses less than those that kill fish. In Pennsylvania, when DDT was sprayed on trees to kill gypsy moths, 70 to 80 percent of stream insects in the treated area were killed. Fish still alive in the stream moved out. No food.

It probably is important to mention here, and now, that all the other poisons being offered for control of something or other in rangeland, farm, orchard or garden, are often classified as being more deadly than DDT—or less so. It is something of a standard, and you have had a glimpse of its performance as a killer.

There is no possible chance of listing even the more publicized among the new poisons. Dr. Clarence Cottam, director of the Welder Wildlife Foundation, Sinton, Tex., formerly the top man in migratory waterfowl management of the F. & W.S., states there are 6,000 well-known brand-named poison formulations sold over the counter. And that in 1958, \$500 million were spent to spread such poison on 100 million acres, or approximately a sixth of all the croplands in the Nation.

Among the many names of poisons, aldrin and dieldrin are fairly well known; they often are in the dusts and sprays your wife uses in the flower garden. Pheasants that picked up as little as one two-hundred-thousandths of an ounce of aldrin or dieldrin, did not die. They lived, but their eggs hatched out far fewer chicks, and those that

hatched died in greater numbers than normal.

Other birds have died. Quail fed a diet containing one-twentieth of 1 percent of DDT for a period of 28 days—died. The poison was accumulative.

Some of these hotshot poisons are so deadly the Food, Drug, and Cosmetic Administration prohibits the interstate movement of foods containing even traces of such poisons. Foods containing as little as one part per million cannot be shipped legally. One part per million is equivalent to about 1 ounce per 30 tons.

Probably the most fantastic outbreak of wholesale killing has been based on the fire ant problem in Southern States. Whoever started the brainstorm that led to the spreading of poison to eradicate these imported ants from States they had invaded, touched off a rigadon of death. And such apparently useless killing it was.

In the first place, Dr. Kirby Hays, assistant entomologist at the Alabama Agricultural Experiment Station, after studying the fire ant in its local habitat in Argentina, reports that insects, and not farm crops or birds or animals, are the principal natural food of the fire ant. He found these ants in cotton fields killing and eating boll weevils. One night 200 boll weevils were placed in a cage near a fire ant mound; next morning not a weevil was left. In a laboratory test, 29 different species of insects were fed to the ants and they chomped down every insect offered. Argentine farmers consider the fire ant rather worth having on their properties.

But someone had poison to sell; and the agricultural interests of the South got sold by someone on the idea these ants were about to take over and devastate Dixie.

Poison was flung about, high, wide, and lethal.

J. H. Moody, Alabama beekeeper, had his bees practically wiped out; declared a money loss of \$7,887.50.

Other checkups showed not only ants were killed but the host of beneficial insects that are a part of producing crops, keeping down pests and parasites that attack such crops—the poison does not discriminate and they were killed, dead. How soon may these tremendously valuable organisms be reestablished? Nobody knows.

The "treatment" with poison was with heptachlor and dieldrin, granules, broadcast by air and ground equipment, at the rate which would average 7 to 12 granules every square inch of soil. Hold your fingers an inch apart, think of 10 granules of death in a square of that size, and figure how any bird or animal could walk across a field so treated and not come in contact with death, for such poisons as these kill through contact.

In Alabama the conservation department obtained affidavits from residents of 36 homes in a "treated" area, with losses reported due to poison including 697 dead chickens, 20 turkeys, 11 cats, 2 ducks, and upward of 50 dogs.

And this also happened in Alabama: A 10-acre area of field, woods, and fencerows, located in Autauga County, Ala., was treated with an aerial application of 2 pounds per acre of technical heptachlor in granular form. Two conservation officers, Joe Cook and Willie B. Golden, Ralph H. Allen, biologist with the department, Game Farm Manager Earl Moses and George M. Kyle, editor, Alabama Conservation, picked up the dead, during a 2-hour period, and 8 days after the poison was spread.

"Estimates were," Kyle stated to me, "that these birds and animals represented from 75 to 100 percent of the population present on the area at the time of chemical application."

And Dr. George J. Wallace, professor of zoology at Michigan State University, who

began in 1955 testing effects of a chlorinated hydrocarbon insecticide on birds on that school's campus has made this statement:

"The current widespread and ever-expanding pesticide program poses the greatest threat that animal life in North America has ever faced—worse than deforestation, worse than market hunting and illegal shooting, worse than drainage, drought, or oil pollution, and possibly worse than all of these decimating factors combined."

Now do you want to consider just where you, yourself, fit into this picture?

DDT is stored in fatty tissues. A random sampling in Los Angeles of people who had no reason to believe they carried DDT showed they had it as much as 33 parts per million. Picked up from fruits and vegetables?

Some poisons generally rated more deadly than "good old DDT," particularly chlordane, toxaphene, aldrin, dieldrin, and heptachlor cannot be washed off most foods even with hot water.

It was found that the poison carrying the name BHC (benzene hexachloride), an insecticide, caused brain tumors when used on human beings.

A booklet titled "Clinical Memorandum on Economic Poisons," published in 1957 by the U.S. Department of Health, Education, and Welfare, tells of a worker who had his clothing splashed (not soaked) with parathion concentrate, who died therefrom. Several others have died from contacts with diluted solutions of parathion. Yet poisons of this class are being spread with slight regard to or knowledge of damage they may do.

A fiendish property in these killers is their universal deadliness. Another frightening fact is that many are accumulative.

I will be charged by some with being sensational, of exaggeration, of presenting only the bad side of all this poisoning and not tell of the billions of dollars saved or other benefits of broadcasting death. But I am scared. You can't be anything but scared when you dig just a little way into what goes with poison in the United States of America.

You can do two things to help offset this which we, and all citizens, face in this poison.

First, write now, to your congressional delegation, urging adequate funds be allotted to investigations, State and Federal, of the effects of these fierce poisons.

Second, there's a whole blazing light of hope if we have enough gumption to insist that instead of kill, kill, kill, as much attention be given to control of pests by natural, biological methods, as we have put into this poison business.

These are things you can do, now—and you'd better do 'em.

Capital Times Hails Senator Williams of Delaware as Champion of Honesty in Government

EXTENSION OF REMARKS OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 30, 1960

Mr. PROXMIRE. Mr. President, the unusually able and resourceful Washington correspondent of the Madison (Wis.) Capital Times has recently written an article published in our Wisconsin paper about the distinguished senior Senator from Delaware [Mr. WILLIAMS].

The Capital Times is a militantly liberal paper. It enjoys a great national reputation of fighting for the underdog and championing liberal economic reform in government.

The Capital Times also deeply believes in honesty and responsibility in government. This is why the Capital Times' citation of the Senator from Delaware [Mr. WILLIAMS], a champion of prudent, conservative, and ardently honest government, is so significant.

Mr. President, I ask unanimous consent that this excellent article documenting some of the great contributions to government made by the Senator from Delaware [Mr. WILLIAMS] be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILLIAMS OF DELAWARE CRUSADES AGAINST WASTE—HERE'S A SENATOR WHO STANDS FOR HONESTY IN GOVERNMENT

(By Ronald W. May)

WASHINGTON.—A skinny, mild-mannered, 55-year-old chicken farmer, who never went to college, was recently voted the best Republican Senator.

Many are convinced that if the diplomatic professors of the American Political Science Association—who did the voting—had awarded a grand prize covering both parties, Senator JOHN J. WILLIAMS would have copped that, too.

WILLIAMS, probably the worst speaker in the Upper House, attracts a near full-house of his colleagues on the rare occasions when he has a short address to make.

The speeches deal with waste and corruption in Government. WILLIAMS finds it, exposes it, and sees that it's stopped.

Last week a colleague—a Democrat—said: "I figure every one of WILLIAMS' speeches has saved the taxpayers a million dollars." The figure may be too low.

WILLIAMS was first elected in 1946. For a time, as he recalls with his usual modesty, he had difficulty finding anything to do that wasn't being done better by others. He did a lot of reading, listening, and questioning: The homework drudgery that the average self-important Congressman won't stoop to do. He concentrated on agriculture, the field he knew (so well, he had become a millionaire from farming and chicken raising, later feed selling).

But in the Truman administration he got a series of tips from Delawareans in Government that sent him off on what has become a personal crusade. The tip told of corruption in the Reconstruction Finance Corporation and the Internal Revenue Service.

WILLIAMS set to work without investigators or inside sources. Before he was through, in 1952, more than 200 Federal officials had been fired, and some were later tried and convicted.

Now the tips came faster. If he was a scourge to the Democratic administration, he has been the same to the Eisenhower Republican administration. Since January 1953, when Ike's new broom began "cleaning up the mess in Washington," the man from Delaware has been merciless. Here are just a few of his exposures:

The Commodity Credit Corporation had permitted itself to be overcharged \$124,000 by railroads shipping livestock feed to drought-stricken farmers. WILLIAMS saw that the 14 railroads returned the money.

The Maritime Administration paid tens of millions of dollars to shipping lines for old ships that had already been fully depreciated under tax arrangements. WILLIAMS said the administration sometimes paid 30 to 50 percent more for the old ships

(then theoretically worth nothing) than the ships had cost years earlier. "This is nothing more than an outright gift of the taxpayers' money," he said. The practice was stopped.

Republican politicians were telling the voters that a tax cut was in the offing. WILLIAMS said such talk was irresponsible and that until "widespread waste and corruption was stopped, and until the budget was balanced, a tax cut would be dangerous."

The Alcohol Tax Division of the Treasury had been making special deals with bootleggers, permitting them to pay only a portion of their tax deficiencies, and then in installments. WILLIAMS called it cheating honest taxpayers, and stopped the practice.

As much as 85 percent of defense contracts have been negotiated, instead of let by bid. WILLIAMS said such contracts are not a matter for friends to work out among themselves.

The Bendix Corp., of Baltimore, sent a crew of men and their families to Hawaii under a cost-plus Government contract, only to find someone had "goofed" and the men were not needed. WILLIAMS used this as an example of "sloppy" administration under cost-plus contracts, and brought a reduction in the number of this kind.

Junketeering Congressmen and Government officials have long spent millions of dollars a year in counterpart and other funds, without an accounting. WILLIAMS' persistent efforts to make such records public has partially succeeded.

More than \$1.2 billion in counterpart funds are "hidden" abroad. WILLIAMS demands that the public be told how these sums are being spent.

Senators HOMER CAPEHART, Republican, of Indiana, and JAMES EASTLAND, Democrat, of Mississippi, have been getting Federal payments on their farms. WILLIAMS revealed that he had never accepted such funds, although entitled to them, and forced the disclosure that his two colleagues had received more than \$1 million over a period of years.

Officers in the CCC and RFC had been firing themselves and friends, then hiring them back after payment of discharge bonuses. WILLIAMS saved more than \$3 million, according to one estimate, by stopping the practice.

The Delta and Pine Land Co., of Scott, Miss., got \$1,216,700 in Federal farm payments last year. WILLIAMS objected on the grounds the farm was wholly owned by a group of wealthy Britishers.

Almost 5.5 million acres, or 23 percent, of all land in the soil bank never would have been in production anyway. WILLIAMS forced a reexamination of the program.

More than half of farm benefits go to absentee owners. WILLIAMS cited the figures.

Three children under 12 years of age received a total of \$50,000 last year not to farm a farm they were listed as partly owning. In the same family, subsidies went to a 14-year-old brother, a father, and a grandfather, for a grand total of \$165,000. WILLIAMS called this ridiculous waste. He said real farmers were not the ones benefiting from Secretary of Agriculture Benson's programs.

The Senate passes on 1,500 postmasters a year, selected by the White House on the advice of State Republican organizations. WILLIAMS called this "disgraceful politics" and "the same old patronage game" and recommended that the post office be taken out of politics. GOP leaders screamed, but he persisted.

The House recently passed a bill, expected to sail through the Senate, too, to let Members of Congress send out unlimited amounts of "junk mail," addressed to "occupants" and "boxholders." WILLIAMS attacked the "unfair" scheme so vehemently it is considered dead.

"Whispering Will" (so called for his weak voice) was surprised to learn a few months

ago that the Internal Revenue Service and other agencies whose inefficiencies and corruption he had exposed were screening their employees for "leaks." Suspects were given lie-detector tests and ostracism. An undisclosed number were fired. But WILLIAMS says none were guilty.

This year, over strong opposition from some in his own party, WILLIAMS won appointment to the Foreign Relations Committee. Said he: "I haven't any fast views on foreign policy except that the alternative to meeting (with the Russians) is fighting."

What makes WILLIAMS so different than the run of politicians here? Well, he likes to say about himself that he may not have a good education, but does have common sense. Others say his most unusual quality is a conscientious dedication to good government, a quality not as common in Washington as some believe.

Unions Look at Landrum-Griffin Bill

EXTENSION OF REMARKS

OF

HON. ROBERT P. GRIFFIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. GRIFFIN. Mr. Speaker, I believe that the Members of Congress, particularly those who supported the labor reform bill last year, will be interested in the article, reprinted below, by Arthur A. Hagman which appeared in the February 1960 issue of the Great Lakelands magazine, formerly Inside Michigan:

UNIONS LOOK AT LANDRUM-GRIFFIN BILL

Recent statements appearing in union publications indicate that much of the opposition expressed in Washington previous to the enactment of the Landrum-Griffin bill, actually did not represent the opinions of large segments of organized labor. In fact, passage of the Landrum-Griffin reform legislation has aroused frankness and determination among many union officials, unheard of during the past decade.

For example, John L. Cooper, president of the Los Angeles Joint Executive Board of the Hotel, Restaurant and Bartenders Union made the following observations in a speech on the west coast recently.

"In my opinion, had the Landrum-Griffin bill, as first passed by the House of Representatives, been submitted by secret ballot referendum to only members of organized labor, union members would have voted in favor of this legislation by an even greater majority than when this bill was first adopted in the House of Representatives. . . .

"I have come to the conclusion that we, in an effort to get labor's side of the story to our readers and the public, have frequently employed tactics that are as reprehensible and even more restrictive than those employed by the public press. Too often policy positions are dictated by union authority, far removed from direct membership control, and the labor editor prints these positions and censors out any news item or membership comment that may challenge such ideas.

"Yet, I call to your attention the fact that in almost every daily paper in this country there is published a 'Letters to the Editor' column where letters from readers are printed representing widely divergent opinion, often in conflict with the paper's editorial policy. . . .

"It seems to me a sad commentary that one of the most reliable sources of objective news regarding both labor and management

in America today is to be found in the Wall Street Journal.

"If censorship is reprehensible and violates principles of democracy, how can it be an honorable or effective weapon for us to use in our continued fight against anti-labor censorship?"

The speech by Cooper was more than an exposition of one union official on the west coast. Other versions were published in union publications far removed from the State of California.

The Chicago Federation of Labor devoted an entire page of its weekly publication to excerpts from the speech under a bold banner line: "Let's Cure Labor's Internal Weakness by Restoring Faith of Our Members."

The labor publication added other of Cooper's remarks by stating, "I think we must recognize that the directed union policies we rigidly publish in our labor press, and the censorship that is employed to try and win adherents to our cause, are having the opposite effect. More and more I have come to believe in the moral principles stressed by Gandhi and Nehru that wrong means never attain a good end."

The Baltimore Labor Herald, a well-edited weekly, also denounced excessive and misleading statements made by top spokesmen for organized labor. The Labor Herald says of the Landrum-Griffin labor reform bill:

"The AFL-CIO officials bitterly opposed the new law. They contended it was so far-reaching that it would destroy the legitimate activities of labor unions, and tip the balance of economic power in favor of business and industrial management.

"When the venom and its hatred have been truly estimated, the high officials of the labor unions will wonder why they became so aroused over L-G provisions. The hypocritical cant of the backers of the bill is outmatched only by the deplorable stupidity of those of the House of Labor who predict it as the 'killer' bill of unionism. * * *

Congressman ROBERT P. GRIFFIN, of Traverse City, Mich., coauthor of the Landrum-Griffin bill, has always maintained that much of the pressure for labor reform legislation came from local union officials and rank and file members. This fact seems to be verified by the statement of Cooper that, "had the Landrum-Griffin bill * * * been submitted by secret ballot referendum to only members of organized labor, union members would have voted in favor of this legislation by an even greater majority than when this bill was first adopted in the House of Representatives. * * *

Congressman GRIFFIN now finds himself a target for the top echelon spokesmen of the Michigan labor movement. He is in a position similar to that of the late Senator Robert Taft, of Ohio, who had coauthored the Taft-Hartley Act in the late forties and as a result became the target of union leaders. Senator Taft won his last bid for the U.S. Senate by an overwhelming majority of 430,000 votes, an indication that rank and file members were even then seeking labor reform.

The Landrum-Griffin bill represents needed reform.

ARTHUR A. HAGMAN,
Publisher.

The 3-Mile Limit and Freedom of the Seas

EXTENSION OF REMARKS OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, March 30, 1960

Mr. MAGNUSON. Mr. President, one of the clearest statements to come to

my attention concerning the vital significance of the conference now in progress at Geneva on the law of the sea was published in the March 27, 1960, issue of the Washington Sunday Star under the byline of Mr. John Barron.

Mr. Barron has made a very thorough study of the issues involved and ably suggests the motives which have inspired the Soviet Union and its satellites to press for an extension of territorial waters to 12 miles instead of the traditional 3 miles.

The Committee on Interstate and Foreign Commerce has sent an observer to the Geneva Conference. The State of Washington and the State of California also have observers there, as perhaps do some of our other coastal States. In any event, the decisions to be made at this conference are of paramount interest not only to our Nation as a whole, but also to the several States on the Pacific, Atlantic, and gulf coasts, and to Alaska, which is bounded by both the Pacific and Arctic Oceans and by the Bering Sea.

Mr. President, I ask unanimous consent to have Mr. Barron's article printed in the Appendix of the RECORD.

There being no objection the article was ordered to be printed in the RECORD, as follows:

THREE-MILE LIMIT AND OUR STRATEGY (By John Barron)

In Geneva the United States now is fighting one of its most important postwar actions to preserve freedom of the seas.

There, representatives of 84 countries are trying to agree how far into the sea national sovereignty should extend.

The vastness of the oceans and controversy over fishing rights have helped obscure the real issue of the conference and the gravity with which this country regards it.

The Soviet Union and its satellite nations are trying to force expansion of territorial waters from the traditional 3 miles to 12 miles.

In their efforts, they have had the exasperating support of countries considered friendly to the United States (including Canada and Mexico) and of neutralist powers with deluded concepts of national security and prestige.

The current conference, convened March 17 by the United Nations, is a continuation of one which recessed in 1958 after failure to achieve agreement about the breadth of territorial waters. Since then, the Soviet Union subtly has tried to foster worldwide acceptance of the 12-mile limit.

"DISASTER" FEARED BY SOME

The U.S. delegation, headed by Arthur H. Dean, prominent New York attorney who helped negotiate the Korean armistice, and retired Vice Adm. Oswald Colclough, acting president of George Washington University, has asserted that the 12-mile limit is "fraught with disaster" for the West.

This is why this country thinks so:

There are 116 straits and ocean passages narrower than 24 miles. All now are open to warships and merchant vessels of every country. But adoption of the 12-mile limit would make them territorial waters and, under international law, subject to regulation by the countries exercising sovereignty.

Much of the deterrent peacetime value of the American 6th and 7th Fleets results from their ability to steam swiftly to the scene of a crisis which threatens war.

Should nations which might be neutral or unfriendly in time of future crises acquire the right to deny American warships

use of key straits, they could delay for days or weeks arrival of our flotillas at the site of embryonic conflicts.

The 12-mile limit also could be manipulated to increase the cost of ocean transport upon which most Western nations heavily depend.

International law grants each country the right to regulate movement of merchant vessels in its territorial waters if it considers the movement "prejudicial to the peace, good order or security."

MIGHT DENY PASSAGE

Should a neutralist or unfriendly nation invoke this power to delay passage of freighters through its territorial waters, it could force shipowners to choose more expensive circuitous routes around straits that might be closed.

The Sino-Soviet bloc conducts most of its transport by overland means. It thus has everything to gain by restricting the right of Western nations to use the sea.

The Soviet Union, together with a minority of other nations represented at Geneva, already has asserted claim to a 12-mile limit. The Russians declare no contractual international agreement specifying breadth of territorial waters have been concluded and that they thus have the right to adopt the 12-mile limit in interests of security.

Non-Communist countries are supporting the Russians at Geneva for different reasons.

One might be called a delusion of grandeur. Indonesia, for instance, has advanced the claim that its sovereignty reigns for 200 miles from its coasts. Other nations also seem to feel a heady sense of power at the thought of owning huge stretches of water.

A more dangerous delusion is the belief, to which some Americans have fallen victim, that extension of territorial waters somehow promotes national defense.

Territorial waters, of course, will not deflect missiles, submarines, ships or aircraft sent to invade them. In peacetime, a submarine or plane assigned to reconnaissance or some clandestine duty will, if necessary to its mission, disregard territorial waters no matter what their extent.

In wartime, territorial waters can attract conflict to the shore of neutral nations.

SUBMARINE SUBTERFUGE

Soviet submarines, for instance, might attempt to get safe passage beyond the patrol of American ships by hugging the coastline of neutral countries.

Under international law, a neutral nation must deny a belligerent military use of its territorial waters. If it fails to do so, the opposing belligerent has the right to intervene. Most smaller nations do not have the military capacity to keep submarines or strong naval units out of their waters.

Some countries evidently are supporting restriction of freedom of the sea out of perverse pleasure at the difficulty it would cause the United States.

Some Western nations are advocating adopting the 12-mile limit with the intention of getting for themselves exclusive rights to coastal fishing grounds.

Increasingly efficient methods of mining the sea have sent fishing vessels farther and farther from their native countries and in some instances into areas only a few miles from foreign shores.

These incursions especially have alarmed such countries as Iceland and Canada in whose economies products of the sea are vital.

The United States is entirely sympathetic to problems of countries involved in conflicts over fishing rights.

But it considers that the conflicts best can be solved through separate compacts among the disputing nations, rather than by diminution of the right of all countries to use the oceans.

SUGGESTS COMPROMISE

At the current conference, the United States has proposed a compromise whereby territorial waters would be extended to 6 miles and exclusive fishing rights to 12, subject to such compacts.

Any international agreement binding all countries requires approval by two-thirds of those represented at Geneva. At the 1958 session, the same American compromise proposal failed by seven votes to achieve such a majority.

Some commentators writing about the present conference have stated that the existing 3-mile limit is obsolete or dead. This is not necessarily true. A majority of the major maritime powers still recognize it. The Soviet-supported 12-mile limit does not have the sanction of tradition, logic or widespread recognition. At this time, the Russians probably cannot muster enough votes to enforce its adoption.

If no agreement is concluded at Geneva, disruptive conflicts among Western nations and with the Soviet bloc will continue. But the United States is prepared to accept these in preference to dangerous curtailment of the historic freedom of the seas.

Boom in Bonds Solves Treasury's 4 1/4-Percent Problem

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. MULTER. Mr. Speaker, under unanimous consent, I commend to the attention of our colleagues the following article by Leslie Gould as it appeared in the New York Journal American of March 24, 1960:

BOOM IN BONDS SOLVES TREASURY'S 4 1/4-PERCENT PROBLEM

(By Leslie Gould)

The recovery in the bond market has made for the moment academic the argument over lifting the 4 1/4-percent ceiling on long term governments.

Government issues which were yielding 5 percent or better a few weeks ago are now returning less than 4 1/4 percent, even in yields based on maturity.

The bond market is based on yields—the return to the investor. When bonds rise, the yields go down, and vice versa.

FIVE-PERCENT RISE IN VALUES

Bond prices in general have advanced 5 percent in value—some even a little better than this. This is so for corporate issues as well as for the governments.

In discussing the doubts as to stock market's trend 5 weeks ago, this column wrote: "The \$64 question is what happens now?"

"Until you find that answer, better buy a few bonds."

A lot of investors have been doing just that for the last couple of months, particularly so since the stock market's big January-February drop.

An additional factor in the recovery in bonds is the easing money, partly by some relaxing of its restraints on credit by the Federal Reserve and also from some slackening in business.

FEB SAVED FROM BONER

At the start of the year—when there was "massive optimism"—the Federal Reserve was preparing to boost the discount rate from its present 4 percent to 4 1/2 percent.

Commercial banks were hinting at a rise in prime rates from 5 percent to 5 1/2.

The only thing that saved the Federal Reserve from another boner—as in 1957—when it jacked the discount too high—was the imminence of heavy Treasury financing. It didn't want to upset the money market. Otherwise it would have boosted the rate.

Those who ignored the Federal Reserve and bought bonds beginning late in January, have substantial profits, as the accompanying table shows.

Treasury bonds

	Latest bid	1960 low
2 1/4% December 1959-62	96.2	92.16
2 1/4% November 1960	99.12	97.27
2 1/4% December 1960-63	98.26	95.16
2 1/4% September 1961	98.28	96.6
2 1/4% November 1961	98.8	95.8
2 1/4% August 1963	95.22	91.8
2 1/4% February 1965	94.0	88.30
2 1/4% March 1965-70	86.24	80.10
3% August 1966	95.2	89.24
2 1/4% September 1967-72	80.2	78.30
2 1/4% December 1967-72	86.12	79.12
4% October 1969	99.30	94.4
3 1/4% November 1974	98.2	92.12
3 1/4% June 1978-83	88.14	82.8
4% February 1980	99.14	93.10
3 1/4% May 1985	88.6	82.4
3 1/4% February 1990	91.6	84.10
3% February 1995	86.24	79.10

Decimals equal thirty-seconds of a point.

The Commonwealth Parliamentary Association Conference

EXTENSION OF REMARKS

OF

HON. J. ALLEN FREAR, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, March 30, 1960

Mr. FREAR. Mr. President, last November it was my great privilege, along with several other Members of this body, to represent the United States at the Commonwealth Parliamentary Association Conference in Canberra, Australia. The Honorable S. A. Pakeman, acting secretary general of the association, has written me commenting on the report which was submitted by the U.S. delegation, and I therefore ask, Mr. President, unanimous consent that this letter be printed in the Appendix of the Record.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HOUSES OF PARLIAMENT,

London, March 28, 1960.

Hon. J. A. FREAR, JR., B.S.,
U.S. Senator from Delaware,
Senate Office Building,
Washington, D.C.

DEAR SENATOR FREAR: Dr. Galloway has kindly sent me a copy of the admirable and interesting report of the U.S. delegation which attended the Commonwealth Parliamentary Conference in Canberra last November. I am very glad indeed that you and the other members of your delegation were able to come, and it was a great pleasure to meet you, even for so short a time. I am sure that your report will further the idea put forward by Sir Howard d'Egville during his visit to Washington last year of placing the "Associated Group" in the U.S. Congress on a firm footing.

With kind regards.

Yours sincerely,

S. A. PAKEMAN,
Acting Secretary General.

Modernization of the Mail Handling Processes

EXTENSION OF REMARKS

OF

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks I would like to include an informative article from the Wall Street Journal of Thursday, March 24, 1960. This article deals with the promise of further economy and efficiency in the Post Office Department through modernization of mail sorting processes.

The article follows:

MECHANIZING MAILS: CITIES, STATES TO GET ELECTRONIC CODE NAMES—CHANGE WILL SPEED SORTING; HOW BABY CHICKS HELP BAR SWITCH TO FULL AUTOMATION

(By Robert P. Dorang)

WASHINGTON.—Within a year or two, the post office may start putting curious new marks on your letters—dull gray bands, down in the lower right-hand corner of the envelope. These marks will signal the closing of a critical gap in the 11-year-old effort to mechanize mail handling.

Meaningless to the ordinary human eye, these imprints will tell a skillful mechanical mail-sorter how to direct letters into post office bins faster and better than mere man alone can do.

The gray band will duplicate the letter's city-and-State address—in code. It will consist of ink in which tiny magnetic filings are arranged in telltale patterns, much as on magnetic recording tape. The resulting magnetic impulses will instruct the sorting machine electronically. Such a city name as Pierpont, S.D., would first be abbreviated to P-R-P-T, S-D. Then each of the six letters would be represented on the gray band by a combination of tiny vertical lines and spacers.

The operation will still depend in part on human hand and eye, however. The coding job will be done by operators seated at key-boards. As letters are conveyed before them, they'll read addresses and tap out on the envelopes the required patterns. Although an additional machine operation will be added, post office officials claim they will achieve an overall gain in speed.

The sorting machines are capable of far greater speeds than they attain now with human operators sitting at their keyboards and striking the appropriate keys. Use of coded letters will enable the machines to run at speeds much closer to their maximum. More importantly, perhaps, coded letters will flow through the machines continuously, avoiding the stoppages that occur when human operators change shifts or break for coffee.

READING HANDWRITING

The coding operation itself, ironically enough, may later be bypassed by more dramatic devices. By next fall, the Post Office will have a prototype of a machine that will read printed or typed addresses and send instructions directly to sorting machines; one such device has already been developed. Later on, machines may even read handwritten addresses. The Post Office Department already has given Intelligent Machines Research Corp., of Alexandria, Va., a contract to develop such a reader.

Thus the technological revolution in the postal system is at last gathering some momentum. This "conventional" modernization is going ahead regardless of the fate of the more futuristic "fax mail" plan. This plan involves sending letters from coast to coast almost instantaneously by facsimile transmission, in which an electronic device "reads" a letter, flashes the image to a receiver by wire or radio, then reproduces the image on paper. And, after 11 years, the limited mechanization actually accomplished is finally beginning to pay a few dividends, in terms of savings of money and manpower and increased mail-handling capacity.

The ultimate goal, in theory, is nothing less than full, untouched-by-human-hand automation within each postal office. "We want a system," says one researcher, "into which you dump a sack of mail at one end and have it come out pouched for dispatch at the other."

This bold aim may someday affect the letterwriter in surprising ways. As some high Government officials envision things, the Post Office may eventually encourage the use of a standard-size envelope, easily manageable by machine, by offering senders some sort of a discount. The traditional form of address may vanish in favor of a series of code numbers, something like today's way of long-distance telephone dialing; postal zone numbers may be just the start of such a system.

COPING WITH GREATER VOLUME

The need for action is certainly compelling. Apart from any hopes for automation-born economies, officials say modernization is a necessity to keep the postal system from being engulfed in future tidal waves of mail. Within the next 25 years the annual volume is expected to double the 66 billion pieces of mail calculated for the fiscal year ending this June. On top of the impact of population increases, "higher living standards," it's predicted, will lift the per capita flow above this year's 370 pieces.

So far, the massive mechanization job is only beginning. Exactly four of the all-important electronic sorting machines are, or soon will be, on duty—two of them here in Washington, one in Detroit and one in Postmaster General Summerfield's hometown of Flint, Mich. Seven more are on order from Detroit's Burroughs Corp. for late-summer delivery. The first real model of postal mechanical efficiency—a new \$15.5 million Providence, R. I., Post Office that was planned from scratch for automation—will open next fall.

Even in planning, crucial gaps remain. Still lacking, for instance, is a device to collect letters from individual city bins after sorting; clerks must pick them out and put them in pouches. The ultimate of full automation may never come, anyway. "How do you 'machine' a box of baby chicks?"

asks the Post Office Department's research and engineering chief, Wade Plummer.

Yet some signs of success can now be glimpsed. The main Washington Post Office was largely modernized last year, at a cost of \$3.7 million. The biggest single improvement was a conveyor system not unlike those long common in food-processing plants. Result: In last December's Christmas rush, the Washington Post Office handled 337 million pieces of mail, a 16 percent increase over the like 1958 period, with slightly fewer man-hours. Each year, modernization is supposed to chip about \$370,000 off the \$35 million annual cost of operating the capital's main postal building.

A simple conveyor system for mail transport in the Detroit office has yielded an annual saving of \$173,696 on a budget of \$40 million.

Postal modernization really began in 1949. In the fiscal year ended on June 30 of that year, the research hunt for new methods and machines began to toddle along on a mere \$49,000. This fiscal year, research spending is expected to total \$11.5 million. As machines have been developed, capital expenditures have climbed—from under \$13 million in the year ended in mid-1949 to over \$142 million this fiscal year.

REPLACING TRUCKS

But up to now, much modernization money has gone for such workaday needs as replacement of the truck fleet and refurbishing of old buildings. Less than \$40 million has actually been spent on the research program since 1949.

Now some 165 Post Office Department engineers and about 150 private engineers working under Government contracts have taken over the upper floors of the Department's building here. Another 160 engineers and researchers are working at postal installations around the country. Together, they guide the Department's research and the efforts of about three dozen cooperating companies, including International Telephone & Telegraph Co., Food Machinery & Chemical Corp., Pitney-Bowes, Inc., Rabinow Engineering Corp., Farrington Manufacturing Co., and Jervis B. Webb Co.

For a glimpse of the postal future, follow the mail through Washington's main post office, as it is and as it will be. At present, mail collected from all over the Capital is dumped on a moving belt where a crew of clerks feverishly try to cull out all mail that is not first class: Publications, advertising matter, packages. The ideal result would be a flow of letters ready for canceling. Actually, considerable non-first-class mail gets by the clerks.

This imperfect, man-power-eating effort will soon be taken over by a culling machine. Mixed mail will first be dropped on a wide, flat, moving belt which shakes it into a level layer. This layer of mail then tumbles into another belt which slopes at the sides. Letters will slide down the slopes through letter-size slots onto other belts which whip them to a stacking mechanism. Packages, too large to pass through the letter slots, fall off the belt into a special hopper.

BUNDLES FOR CANCELING

Today, hand-culled first-class mail is dumped on tables where women clerks square it into little bundles for canceling. Then the facer-canceler takes over. This machine, a product of Pitney-Bowes, electronically scans each envelope to find the stamp and then positions the letter before a die that applies the postmark. Canceled envelopes streak out at a rate of more than 30,000 an hour.

Once canceled, letters are sorted in the Washington Post Office either by hand or by machine; a sorter made by Bell Telephone Manufacturing Co., and I.T. & T. subsidiary, went on duty here in 1958. Letters move one by one, address side up, before six operators at keyboards. The operators strike keys caus-

ing the letters to drop into small bins corresponding to 300 destination cities. A typical rate: 55 letters a minute. In speed alone, the machine can outdo a half-dozen hand sorters by some 27 percent, and the hand sorters can handle no more than 84 destinations.

New sorting machines seating 12 operators apiece have been ordered from Burroughs Corp. and Cadillac Gage Co., a subsidiary of Detroit's Ex-Cell-O Corp. They will, naturally, roughly double the capacity of the six-seaters. Even then, the speed of sorting will still be limited by the operator's reading speed. Once magnetic ink coding is perfected, however, sorting speed will be limited only by the machine's own velocity.

Packages present special mechanization problems. Once pulled from other mail, they're sorted in the Washington Post Office by a complex two-story machine developed by Detroit's Jervis B. Webb Co. From a conveyor belt, the parcels are deposited on trays riding around on the edge of a second belt, something like passengers on a merry-go-round. Just before, say a Chicago-bound package reaches a tray, an operator at a keyboard reads its address and taps out, electronically, instructions that tell the tray when to tilt and spill off its package. When the merry-go-round has brought the tray around to the right spot, the tray dumps the package down a chute to a mail sack destined for Chicago.

At best, old structures like the Washington Post Office are poorly suited for modern machines. The goal is custom-tailored buildings like Project Turnkey, the new post office rising at Providence. It will be a long, one-story structure, without the columns that interfere with placement of machines, to provide something like a continuous flow of mail.

The project is being handled entirely by an I.T. & T. subsidiary called Intelix Corp. Turnkey is to be capable of handling from 1.5 million to 2 million pieces of mail a day, about 50 percent more than Providence's main post office can manage now.

Beyond Turnkey lies Project Gateway, a plan to build at Oakland, Calif., the most modern postal facility possible. The design contractor is Food Machinery & Chemical. Rollin Barnard, Assistant Postmaster General for facilities, says: "Almost all the equipment to go into Gateway has yet to be invented."

Farm Labor and Congress

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 30, 1960

Mr. JAVITS. Mr. President, on Monday, March 28, the New York Times printed a stirring editorial on the American farm laborers. In the last session, with my colleague from New York [Mr. KEATING], I introduced S. 1778, a bill to provide for registration of crewleaders. This bill was introduced at the request of Secretary of Labor Mitchell. The measure would require that the approximately 10,000 crewleaders involved in migratory agricultural employment file information regarding conduct and methods of operation on the job, their financial responsibility, transportation, wage arrangements, housing, and other working conditions concerning migrant workers in each crew.

This and other similar measures are under consideration by a Senate Sub-

committee on Migratory Labor under the chairmanship of the distinguished Senator from New Jersey [Mr. WILLIAMS].

The Department of Labor feels S. 1778 would be extremely helpful in checking the exploitation and abuse of our migratory agricultural workers.

I am pleased to see that the New York Times paid a well-deserved tribute to Secretary of Labor Mitchell's leadership in a very important field of American labor, and I ask unanimous consent to have the editorial which paid that tribute printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FARM LABOR AND CONGRESS

It is difficult to conceive of a more helpless group, in terms of economic and political power, than the roughly half million migratory farmworkers in this country. Their labor, usually performed with bent back under a broiling sun, is likely to be unpleasant and physically taxing. Yet they are among the poorest paid persons in our society, have less Government protection than any other significant group of our wage earners, and—since they have no effective unions and usually cannot meet residence requirements for voting—are almost totally incapable of defending their own interests.

Moreover, in some areas of the country the wages and working conditions of these workers are depressed by competition from Mexican workers imported annually with the sponsorship of our Federal Government. Their employers, on the other hand, are typically prosperous and well-organized farmers who exert effective pressure on their own behalf in the marketplace and before Government agencies.

A House subcommittee headed by Representative E. E. GATHINGS is currently holding hearings on a bill to extend beyond June 30, 1961, the present program of importing Mexican farmworkers. These hearings last week developed into a crucial battle between those religious and other groups concerned with helping the most helpless workers in our society and groups of employing farmers who approach the problem from the point of view of minimizing their labor costs and maximizing their profit. Unfortunately, the subcommittee has been showing more sympathy for the representatives of the strong than for those who plead for the weak.

To his credit, Secretary of Labor James P. Mitchell has been providing leadership for those who believe that American farm laborers deserve the same protection as Americans who work in any other occupation. Secretary Mitchell is scheduled to testify before the subcommittee this week. It is to be hoped that he will persist in his advocacy of a square deal for the migrants. And it is to be hoped, too, that Representative GATHINGS and his colleagues will understand that the situation of these workers is a blot upon our Nation and needs to be improved, not further depressed.

Giving Americans Longer Life

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. CANFIELD. Mr. Speaker, when I retire from the Congress next Jan-

uary, after 37 years of service on Capitol Hill, I shall do some writing. Among the Congressmen I must remember is JOHN FOGARTY, of Rhode Island, who in his 20 years in the House has become our country's greatest legislative authority in the matter of Government funds for medical research.

Our United States now leads the world in providing funds to knock out the dread disease killers of mankind. This is due in large part to this young crusader whose first speech in the House I shall never forget. JOHN FOGARTY and I came into the House together in January 1941. Early in the session he arose to make a brief appeal for support of a humanitarian cause and I heard him begin with these words:

Mr. Speaker, less than 3 months ago I was laying brick in the streets of my home city of Providence. I have my AFL bricklayers' local card in my pocket * * *.

Let the following article from the Pas-saic (N.J.) Herald-News of March 29, 1960, tell more of the Fogarty story:

GIVING AMERICANS LONGER LIFE—THAT'S CONGRESSMAN FOGARTY'S MISSION

(By Don Oberdorfer)

WASHINGTON.—This year, for the first time, more than half of all the medical research in this country is financed by the Federal Government.

In this milestone year, researchers are getting Federal dollars to study such things as the circulatory system of the octopus (\$24,292) and the effect on mealworm beetles of the age of their parents (\$9,884).

Federal employees at the Government's Rocky Mountain lab have succeeded for the first time in giving encephalitis to garter snakes.

And Federal health officers have just informed Congress about special studies of influenza in an isolated Bering Sea community, a mumps epidemic in an Eskimo colony and rare eye disorder troubling Indians in Halifax County, N.C.

Some of these studies may sound silly, but one of them may save your life.

For example, the officials in charge say the octopus data may be important in human heart research.

Snakes are now believed to be passive carriers of encephalitis, which killed 21 people recently in New Jersey. And epidemics in isolated places offer unusual chances to determine just how a disease spreads.

Such projects as these, plus more ambitious and expensive studies in cancer, heart and other fields, have helped produce an important advance:

An American baby boy born in 1940 could expect to live 61 years. By 1957, medical progress had added 5 years to his expected life.

This is deeply satisfying to Representative JOHN FOGARTY, Democrat, of Rhode Island, a 47-year-old former bricklayer who is the man most responsible for the Government's booming medical research program.

This is his 11th year as chairman of the House subcommittee in charge of health appropriations. He has lectured, wheedled and coaxed reluctant administrators and his fellows in Congress into higher and higher appropriations for medical research.

"When I came to the committee I found the Federal Government was spending only \$2 million a year for medical research, but that \$100 million was being spent for agriculture studies to find out what kills plants and animals," FOGARTY says.

This year the Federal Government is spending an estimated \$376 million for medical research, double the amount of just 3 years ago.

All U.S. private medical research is officially estimated to total \$335 million this year.

This includes the research spending of private industry (mainly drugs), the States, foundations and voluntary health drives.

The private research has been growing rapidly, too.

FOGARTY expects the Federal total to continue to rise, and is pushing a new appropriations bill to beef up the Federal effort.

The increase in Federal research importance doesn't bother FOGARTY. "Somebody has to do these things. So often, we find they are just not being done."

When FOGARTY discovers such a situation, things often happen fast.

He learned at a meeting in his home State 6 years ago about the need for research to help mentally retarded children.

"I found out there was virtually no Federal research program. We gave them \$750,000 for the first year and told the doctors to go to work," he recalls.

This year's program: \$11 million for study of mental retardation and related disorders. Outlook for next year: An increase from FOGARTY's committee.

The Federal money has played a major role in advances in this field. Several types of mental retardation can now be prevented.

As the FOGARTY era rolls along, the National Institutes of Health plan to acquire a new farm for the experimental animals so important to medical knowledge.

The expected "population" in 5 years: 200,000 mice, rats, guinea pigs, and rabbits; 1,500 monkeys; 1,000 cats and dogs, and colonies of Japanese quail and marmosets, all used to extend human life in the ever-increasing Federal research program.

Operation of Soil Bank in Wisconsin

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 30, 1960

Mr. WILEY. Mr. President, the challenge of finding a lasting solution to our problems in agriculture, I believe, still hinges upon the adoption of a realistic program for creating a supply-demand balance of farm commodities.

We realize, of course, that gearing production to achieving a national consumption-utilization goal is difficult—particularly when the production plant is owned and operated, for the most part, by millions of independent farmers across the country. On a voluntary basis, the farmer would find it difficult, to say the least, to proportionately gear production to the national volume of consumption-utilization.

Despite these difficulties, however, I believe that we must, in the interests of the farm and overall economy, continue efforts to achieve a supply-demand balance.

Meanwhile, it is necessary to keep chopping away at surpluses, crops, and production.

As we know, a major program, designed to take cropland out of production, of course, has been the conservation reserve of the soil bank.

According to estimates, the conservation reserve will take about 28 million acres out of production in 1960.

Overall, the program has two major purposes: First, reduction of crop outputs, particularly in heavy surplus commodities; and second, conserving the soil for future needs of the ever-expanding population of our Nation.

The conservation practices, also, involve tree plantings, under 10-year contracts, currently including nearly 2 million acres.

However, this program, alone, cannot be expected to solve the surplus crop program.

Nevertheless, it is making some headway toward reducing surplus crops at a substantially lesser cost than the price support program.

Recently, Thomas A. Hamilton, an outstanding agriculturist of Wisconsin, who is administrator of the soil bank, reviewed the impact of the soil bank upon our Badger State. In addition to reduction of crops normally in surplus, Mr. Hamilton feels that the program is also reducing dairy herds—thus making a contribution also toward a supply-demand balance in milk production.

Reflecting the operation of a program upon which Congress soon must make decisions, I ask unanimous consent to have an article from the Wisconsin State Journal outlining Mr. Hamilton's views, as well as a fact sheet from the Department of Agriculture on the scope of the conservation reserve of the soil bank, printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Wisconsin State Journal, Mar. 25, 1960]

SOIL BANK HELPS STATE, U.S. OFFICIAL SAYS HERE

(By Robert C. Bjorklund)

The top administrator of the Nation's soil bank program said here Thursday afternoon that the program of taking land out of production has helped reduce dairy cow numbers in Wisconsin.

Thomas A. Hamilton, the Westfield farmer who moved to the Washington post 3 years ago, said it was his personal belief that the high number of whole farm units put into the soil bank's conservation reserve resulted in the sale of producing herds.

Hamilton spoke at the 48th annual meeting of the Wisconsin Livestock Breeders Association at the East Side Businessmen's Association clubhouse.

He made frequent references to unfriendly press reports on the soil bank, but noted that for every dollar invested to remove cropland from production has resulted in a \$2 to \$6 reduction in crops, most of it surplus.

PAYMENTS NOT LARGE

While numerous press reports emphasize that only big farmers get any benefit from the program, the payments per farm for the 300,000 farmers in the program are not large, he asserted.

"Last year about 22.4 million acres of productive cropland was put into the soil bank's conservation reserve at an average payment of \$11.50 per acre," he continued.

Hamilton said that out in the Great Plains where wheatlands were opened because of the pressure of wartime production, 8 million acres of that land had been returned to native grasses.

"We count that as a real achievement and sooner or later that achievement will be recognized," he declared.

In the old cotton country of the southeastern United States, soil bank lands are going into trees and, because of rapid growth, pulpwood harvests can be made in 12 to 15 years, Hamilton told his audience of more than 100 persons.

He said that the wildlife aspects of the soil bank were an extra dividend and the program had gained the support of major wildlife organizations.

The association honored three men for their contributions to the livestock industry. Plaques were presented to Nick May, Mineral Point, pioneer cattle feeder and Angus breeder; Ralph Reynolds, Lodi, top Short-horn breeder and judge; and Lewis C. French, Milwaukee, retired Milwaukee Journal farm writer.

Rex Whitmore, Burlington, was reelected association president. T. J. Griswold, Livingston, was picked as a new director and vice president; and Ralph Wilson, Burlington, elected new director and treasurer.

Other new directors picked were Otto Johnson, Rio; and Glenn Richards, Lodi.

The association is composed of beef, swine, and sheep breeders in the State and is sponsor of the junior livestock shows.

SOME FACTS ABOUT THE CONSERVATION RESERVE OF THE SOIL BANK

The conservation reserve of the soil bank is a program in which farmers voluntarily sign contracts with the U.S. Department of Agriculture to retire general cropland from production and devote it to conservation uses. The contracts provide that the USDA will make an annual payment to the contract signer and will assist in establishing the conservation use on the land.

During the 1959 crop season about 22.5 million acres of cropland on nearly 250,000 farms were under conservation reserve contracts. About 5 million new contract acres are expected to be added during the current signup period, bringing the total acreage for 1960 to around 27.5 million acres.

Conservation reserve contracts may be for 3 to 10 years, depending upon the conservation use to be established on the land and the wishes of the farmer. Land on which there is an acceptable vegetative cover at the time it is placed under the program may be contracted for 3 to 10 years. Land on which a vegetative cover (grass, legume or a grass-legume combination) is to be established may be contracted for a 5- to 10-year period. If the contracted land is to be established in forest trees, the contract period must be for 10 years. Land on which ponds, or other water-impounding practices, or wildlife cover is to be established may be contracted for periods of 5 to 10 years.

Grass cover is being established or maintained on 20.4 million acres—15.4 million new acres planted and 5 million acres to be maintained. The Great Plains area of 422 counties accounts for 7.7 million acres being planted to grass.

Trees and shrubs are being established on 1.8 million acres of conservation reserve land. Forest tree cover is particularly popular in the Southeastern and the Great Lakes States.

Plantings of cover, especially for the benefit of wildlife, are established on 212,000 acres of conservation reserve land. These plantings include shrubs that provide protective cover and also shrubs that produce seed for feed. In addition, there are also general benefits to wildlife from forest plantings and grass cover being established on conservation reserve land.

Ponds and other water-impounding structures to be built on conservation reserve land total 6,800, covering 26,600 acres. These structures impound water for fish, waterfowl, and other wildlife.

Of the 22.5 million acres of cropland in the conservation reserve during 1959, 66 percent (14,766,000 acres) is on farms on

which all the eligible land has been placed in the program. Since all the crop-producing land has been taken out of production on these farms, the production adjustment accomplished cannot be offset by more intensive crop production on other land on the same farm.

The farms on which all the eligible land (14,766,000 acres) has been placed under conservation reserve contracts retired from production 1.8 million wheat-allotment acres, 439,000 cotton-allotment acres, 57,780 peanut-allotment acres, 7,650 tobacco-allotment acres, and 4,860 rice-allotment acres. In addition, these farms took out of production 905,000 acres which were assigned as corn-allotment acres in 1958.

White House Conference on Dependent Children

EXTENSION OF REMARKS OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. ROONEY. Mr. Speaker, this year will mark the 50th anniversary of the First White House Conference on Dependent Children which was called by President Theodore Roosevelt in 1909.

This anniversary provides an opportunity to recall the contributions to American social work of one of the men selected by President Roosevelt to be a vice chairman of the 1909 conference, the late Thomas M. Mulry, of New York City, who was the maternal grandfather of our distinguished colleague, the gentleman from Connecticut [Mr. MONAGHAN].

Mr. Mulry was an unusual man. He was a banker and at his death was president of the Emigrant Industrial Savings Bank in New York City. He was also a devoted and unselfish worker in charitable causes, devoting the major portion of his efforts to the cause of Catholic charities in general and the St. Vincent de Paul Society in particular.

This society was and is devoted to aiding the poor and the unfortunate and Mr. Mulry from the days of his youth gave his principal efforts to the success of this organization. So successful were his labors that he rose to become national president of the society and for his efforts was made a Knight of St. Gregory, was given an honorary degree of doctor of laws by Catholic University, and was awarded the famous Laetare Medal by the University of Notre Dame.

In a time when publicly financed welfare institutions had scarcely begun to develop, Mr. Mulry did yeoman work in developing cooperation between the many private charitable organizations which had hitherto pursued their independent courses. He worked for and developed joint efforts by groups of differing religions and between religious and nonsectarian societies. He was a leading figure in the movement to remove dependent children from the almshouses to which they were then sent, to proper child-caring institutions.

Mr. Mulry was one of the founders of the National Conference of Catholic Charities and one of the organizers of the New York State Conference of Charities and Corrections. He served as a member of the Conference of Charities of the City of New York, the Charity Organization Society, the State Board of Charities and the Commission of Public Hospitals of the City of New York. He was one of the moving spirits in the founding of the School of Social Science and Fordham University where his brother, Rev. Joseph A. Mulry, S.J., was president.

Mr. Mulry was essentially a simple man. He was a man of strong religious faith and of exemplary life. He and his talented wife, who was a graduate of Hunter College and an accomplished linguist, were the parents of 13 children. Mr. Mulry served his God in serving his fellow man and his interest was ever given to those who were least fortunate and least influential—the out-cast children.

Mr. Mulry's life and accomplishments are in the best American tradition. They set a high standard of performance for those who come after him in the field of social service and this anniversary of the conference which he helped to organize is an appropriate time to recall them to mind.

Mrs. Eric H. Schwartz: A Life Dedicated To Service Through Mary Eleanor Brackenridge Clubs; Public Benefactions of Mary Eleanor Brackenridge and Col. John Brackenridge

EXTENSION OF REMARKS OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, March 30, 1960

Mr. YARBOROUGH. Mr. President, recently was my honor and privilege to speak to members of the National Mary Eleanor Brackenridge Club of Washington, D.C., at their annual international friendship day luncheon.

Meeting with this group was of special significance to me and my wife, Opal, for both of us have long recognized and respected the inspiring influence of the great Brackenridge family of Texas on education in our State, and in encouraging international friendship among peoples of the world.

All of us know that we have gotten to a point in history where international friendship and understanding is no longer only a desirable state of affairs but has become an absolute necessity. In this age of speed beyond the sound barrier and awesome atomic power, we must learn to live together or else run the very real risk of annihilating life as we know it.

Mary Eleanor Brackenridge was a member of the original board of regents of Texas Women's University and remained a member until her death, a

period of a score of years. Mary Eleanor Brackenridge was responsible for so many benefactions that space will not permit their enumeration here. Her distinguished brother, Col. John Brackenridge, donated Brackenridge Hall, in which I resided as a student to the University of Texas, and served it as a regent for nearly a quarter of a century. One of the leaders in the National Mary Eleanor Brackenridge Club of Washington, D.C., is a former Texan, Mrs. Eric H. Schwartz, widow of a noted doctor. Recently one of Washington's best known and respected columnists, Texas Easley of the Associated Press, devoted one of his "Texans in Washington" columns to the work of this kindly lady. I ask unanimous consent to have printed in the Appendix of the Record Mr. Easley's column printed in the February 28, 1960, edition of the Moore County News, Dumas, Tex., under the heading "Brackenridge Has Special Meaning for Noted Widow."

There being no objection, the column was ordered to be printed in the Record, as follows:

BRACKENRIDGE HAS SPECIAL MEANING FOR NOTED WIDOW
(By Tex Easley)

WASHINGTON.—The name Brackenridge, known to countless thousands who have strolled through San Antonio's famed Brackenridge Park, has a deep significance for Mrs. Eric H. Schwartz, 75-year-old widow of a noted doctor.

She has dedicated a lifetime to perpetuating the memory of M. Eleanor Brackenridge, and in doing so has spread a bit of good will among many peoples throughout a troubled world.

Her inspiration stemmed from financial aid received as a student at old C.I.A. College for Women in Denton more than a half century ago. The aid came from one of the scholarships established by Miss Mary Eleanor Brackenridge. Miss Brackenridge, whose family gave the park to San Antonio, was a member of the C.I.A. board of regents.

Upon leaving C.I.A. in 1910, the then Annie Andrews taught high school English in Beaumont for 5 years, then went to the University of Illinois for advanced work.

Soon she became Mrs. Eric H. Schwartz, wife of a physician and surgeon who did pioneering cancer research after they moved to Washington in 1916. One of their two sons is Dr. Eric H. Schwartz, now a practicing physician in Waco. The other is Navy Cmdr. George Schwartz.

Since she left college, Mrs. Schwartz has helped organize many M. Brackenridge clubs over the country, all dedicated to setting up scholarships for international student exchanges.

Each year on March 7 these clubs observe "Friendship Day" in honor of the birth of Miss Brackenridge. She was born March 7, 1837 and died in 1924, just short of her 88th birthday.

The National M. Eleanor Brackenridge Club will celebrate the occasion here 2 days early this year. Senator RALPH YARBOROUGH, Democrat, Texas, is the scheduled speaker at a luncheon gathering. Representatives of the Brazilian and some other embassies are expected to attend.

In some years the Voice of America makes a recording of the annual "Friendship Day" talks and broadcasts them to various parts of the world.

Mrs. Schwartz, born in Big Spring, where her father, Tom Andrews, was the first prosecuting attorney, lives in a home overlooking the Potomac River.

She spends her spare time delving into historical matters—she's a member of the Daughters of the American Revolution.

Recently she learned that in the building of a sprawling new hospital on the old Soldiers' Home grounds here, a few graves in an old cemetery had to be moved.

One of these graves was that of the grandfather of Miss Eleanor Brackenridge. Born in 1769, he was the first Presbyterian minister to hold a pastorate in the District of Columbia and he also served as a chaplain in Congress.

In her research, Mrs. Schwartz learned that Rev. John Brackenridge as a boy had seen his mother and father and sister slaughtered by Indians in a remote Pennsylvania community. His son, John Adams Brackenridge, the father of Miss Eleanor, moved to Jackson County, Tex., just before the Civil War and died soon thereafter. The family then moved to San Antonio.

Why I Am Proud To Be an American

EXTENSION OF REMARKS OF

HON. JACKSON E. BETTS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. BETTS. Mr. Speaker, the American Legion is responsible for many praiseworthy patriotic activities. Among these is an annual essay contest for high-school students. From the State of Ohio, 12 winners are selected and awarded a trip to Washington, D.C., and I am proud to say that one of these this year is from the district I represent. I think the words written by this young lady, Miss Lorena Seebach, a 10th-grade student from Forest, Ohio, are well worth recording and calling to the attention of all my colleagues in Congress. Miss Seebach speaks for me and I am sure millions of our citizens when she tells us "Why I Am Proud To Be an American":

WHY I AM PROUD TO BE AN AMERICAN

(By Lorena Seebach)

Why am I proud to be an American? There are many reasons. Our country's storied past, its prosperous present and its promising future all give each American citizen many reasons to be proud.

Our American heritage is something of which every citizen can justly be proud. Our Nation was made by its people. Not only by famous men like Washington, Jefferson and Lincoln but by all the other "common" people who, though not mentioned in history, have built a great Nation.

I am an American most probably because one of my ancestors became tired of being pushed around or wanted new opportunities which he could not find in his birthplace, or wanted to own land for himself. He came to a new land and there he helped to make real the dream that became America. Someone bought my share of America at a price. This gift was not given to me without conditions. That which has been won by courage must be kept by courage and that which has been achieved cannot be enjoyed without new achievement.

America is a promise—a promise of freedom. The first Americans asked only freedom to worship God in their own way. Later their children asked the freedom to govern themselves. Today we look forward to these freedoms and also to freedom from

many of the other problems which have plagued people from the beginning of time. It is this freedom and this idea of a growing freedom that is the promise of America.

As for government, we rely upon the ballot and the legislative hall to settle differences of opinion and not upon secret police and slave camps. Democracy was not built upon the supposition that we have to keep a close watch on the loyalty of our neighbors. Democracy was built on faith—faith in ourselves and faith in others. Freedom applies to everybody in this land at all times and in all places. It applies to those with whom we disagree as well as to those with whom we agree.

Americans conquered a continent and built a Nation. Our land frontier has passed; however, the frontier of science and a better understanding of human welfare are barely opening. This new field of science will not be conquered except by men and women of free spirit and free mind.

The moral and spiritual qualities which rise only in free people will fulfill the meaning of the word "American" and with them will come centuries of further greatness for our country. The future of America; indeed, the future of the world is in our hands. It is our duty as the American citizens of today to give to the citizens of tomorrow a heritage of which they can also be proud.

Regional Forester Connaughton Praised by California Paper

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 30, 1960.

Mr. ENGLE. Mr. President, those of us who are in the public service are more often hit by criticism than by praise. It is therefore always gratifying to read a laudatory comment on the work of a public official. The Bakersfield Californian recently gave some well deserved recognition to Mr. Charles E. Connaughton, California's regional forester. In a March 14 editorial the paper calls attention to Mr. Connaughton's annual report and points out that "the soundness of the multiple-use concept of forest land management has been well demonstrated by Regional Forester Connaughton and his force in the 17 national forests in California, which contain the major portion of the watershed, timber, mineral, recreation, and grazing lands in the State."

I want to congratulate Mr. Connaughton and his staff on the success of their operation and to commend the Bakersfield Californian for its excellent editorial. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REGIONAL FORESTERS REPORT INTERESTING

That 1959 was an extremely busy and productive year for the U.S. Forest Service in California is the point well emphasized and supported by the annual report of the regional forester, Charles E. Connaughton, whose administration has contributed much to the advancement of the State's great resources in the national forests within its borders.

The soundness of the multiple-use concept of forest land management has been well demonstrated in the development by Regional Forester Connaughton and his force in the 17 national forests in California, which contain the major portion of the watershed, timber, mineral, recreation, and grazing lands in the State. Upon the wise management and use of these lands depends the very existence of California's population.

Mr. Connaughton observes in his report that "the practical workability of the multiple use concept of National Forest administration is now being tested on a scale and to an intensity beyond anything we have experienced in times past. Wood, water, forage, recreation, scenery, habitat for fish and game will be provided to the maximum of the land capability on a sustained yield basis."

The mounting difficulties faced by the Service in accomplishing this objective are growing with the pace of population and the concurrent burdens on the national forests, with conflicting interests providing added troubles; but the Service, holding fast to the concept outlined by the regional forester, has endeavored to adjust these conflicts so that the greatest good for the greatest number in the long run will prevail. In so doing, it deserves the steadfast and earnest support of the public.

Mr. Connaughton also observes that the dilemma between present consumption and future use is ever with us. The new program for the national forests, made public during 1959, contains our best estimates of what provisions we think are necessary to help meet the needs of the Nation. Management must become progressively more intense and more adequately supported by research findings if the national forests are to keep pace with economic needs and national growth.

California legislators in Congress have expressed their warm support of this program, with enthusiastic support from their constituents, and should be encouraged in persisting in their demands that the administration provide the forest service with the funds to do the work.

Forest areas were used in 1959 by an increasing number of persons for recreation, with millions going several times a year for hunting, fishing, riding, skiing, picnicking, camping, swimming, and other purposes. More than 13,500,000 visits were recorded in the national forests in California during the past year, amounting to 23,451,000 man days of use, according to the regional forester's report.

Flood control, soil and water surveys, brushland management, range vegetation, range analysis, timber sales and management, reforestation, fish and wildlife management, fire suppression and control, mineral examinations and many other phases of the Forest Service work are reported in the report submitted by the regional forester to the people of California, and a study of it will reveal the high quality of work and dedicated devotion to duty that are to be found in the operations of Mr. Connaughton and his force.

Sgt. Alvin C. York Still a Hero— Still a Fighter

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. EVINS. Mr. Speaker, Sgt. Alvin C. York is one of America's greatest liv-

ing war heroes. Perhaps no American fighting man ever displayed greater personal courage or made a greater single-handed contribution to the country for which he fought than did Sergeant York—the greatest hero of World War I.

Alvin York grew up in the hill country of Tennessee, near Jamestown, in Fentress County, which I have the honor to represent in the Congress. On returning from Europe and the battleground where he single-handedly killed 25 and captured 125 of the enemy, he received a befitting hero's welcome. The Tennessee sergeant could have turned his war deeds into a huge fortune but rather than accept the many glamorous offers which were urged upon him, Sergeant York chose to return to Fentress County and to settle on a small farm there and to make his contributions to his home community.

He helped to start two schools in the community where he lived, and more than 20 years after the war, when he was convinced that the story of his life and military career would be treated with proper dignity, he sold his rights to the books written about him and consented to have his life story filmed. He gave the proceeds from the sale of these rights to one of the schools which he started—a Bible school for youth—York Institute. He has continued to live on his farm and enjoy the rural life which he had always known. After the sergeant had donated the money he received from the filming of his life story, the Internal Revenue Service asserted that he owed \$85,442 in income taxes as a result of the movie, even though in other cases the Internal Revenue Service has allowed capital gains tax and other benefits for those who have received sizable amounts from film rights or from books.

Mr. Speaker, it should be pointed out that a rule or a law is not fair if it applies to one citizen and not to all citizens alike. I am informed that while Sergeant York was denied the right to count his income from the filming of his life story as capital gains President Eisenhower was allowed to count his income from the sale of his book, "Crusade in Europe," as capital gains and thus pay much less in taxes than if counted as straight income. Here we have a law interpreted by Tax Bureau officials one way for a general of World War II and the same law interpreted in another way for a sergeant of World War I.

Sergeant York has never been able to meet the demands of the Internal Revenue Service and his present financial status indicates that he will never be able to pay this back tax without selling his farm and perhaps bankrupting this citizen-soldier. He recently has been granted social security benefits. His income, I understand, includes \$32 monthly social security benefits, a \$60 monthly disability pension, and a \$10 monthly payment as a Medal of Honor winner, plus a small income from his farm.

Although stricken and ill and confined to bed and wheelchair, this great Tennessean is still bright, cheerful, and still a hero.

Mr. Speaker, it should be made clear that neither Sergeant York nor any member of his family has requested that I assist him in any way and that my remarks on behalf of Sergeant York is entirely voluntary. Just as he requested no help in fighting the battles of World War I, he has requested no help in fighting the tax battles since his return. Others feel, however, that the Internal Revenue Bureau is unusually severe in handling his case.

In this connection, Mr. Speaker, Inez Robb, a columnist for the Scripps-Howard newspapers, has written a column pointing out Sergeant York's present plight and urging that his so-called taxes should be forgiven.

Mr. Speaker, I ask unanimous consent that this writing, which appeared in the Washington Daily News of March 29, last, be reproduced in the Appendix of the RECORD.

The article follows:

SERGEANT YORK'S TAXES SHOULD BE FORGIVEN
(By Inez Robb)

It is with real sorrow that I read that Sgt. Alvin Cullum York, superhero of World War I, old and ill, has at last been forced by circumstances to apply for such social security benefits as are due him as a self-employed farmer. For the past 6 years the sergeant, 72, has been bedfast, following a stroke. And it has been hard for him to farm the 400 acres in Fentress County, Tenn., given him by a grateful State when he returned from World War I, the outstanding popular hero of that conflict. The Medal of Honor was tucked away in his luggage, and so were decorations from a half dozen other governments.

Sergeant York became the darling of the Nation, as no man has since, with the possible exception of Charles A. Lindbergh. Single-handedly, the sergeant put a German machinegun battalion out of action, killed 25 of the enemy, captured 125 Germans and marched them back to the allied lines.

RETURNED

He returned from the war to a hero's adulatory welcome. On the pier to meet him was a covey of business representatives, waving fat contracts under his nose. The sergeant could have cashed in for a fortune if he had been willing to exploit his heroism. The sergeant said, with finality and the instinctive good taste that marks him, that his services to his country were not for sale.

So the hero went back to the hill country of Tennessee to his old home in Fentress County.

He made some money by occasional dignified lectures and by writing. With the proceeds he started a school where the boys in the district would learn not only to read and write, but improved agricultural methods and the girls the latest in domestic science.

And he started a second school, dear to his heart, a Bible school. Hollywood kept trying to buy his life story. But it was not until 1940-41, when he was convinced that the story would be treated with dignity, that he consented to its filming. And that is the juncture at which Sergeant York began having trouble with Uncle Sam.

All the proceeds of the film about the man the late General Pershing described as "the greatest civilian soldier" in World War I were devoted by that civilian to his Bible school. He and his family continued to live with their usual simplicity on the farm. He was still unwilling to make money for himself out of his service to his Government.

But now Uncle Sam says the older sergeant owes \$85,442 in income taxes as a result of the movie. Like another ex-soldier, this

time of World War II, Joe Louis, the sergeant just hasn't got it. And now, he has applied for social security benefits.

I wish Uncle Sam could find it in his heart to forgive him his alleged tax indebtedness, a sum the Government doesn't really need, and let the old hero end his days in peace and honor.

Mass Transportation Facilities

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, March 30, 1960

Mr. CASE of New Jersey. Mr. President, the crisis the people of New Jersey, Connecticut, and New York face in maintaining our mass transportation facilities continues unabated. Very recently, I had an opportunity to meet with several commuter and municipal and county railroads in my State.

Included in the group were former Mayor Thomas T. Taber of Madison, N.J., chairman of the Morris County Railroad Transportation Association; Joseph Harrison, Newark attorney, who is counsel for the association; Mayor Edward Tiller of Garwood, chairman of the Mayors' Committee of the Inter-Municipal Group for Better Rail Service; Augustus Dreier, counsel of that group, and F. T. Richardson of Mendham, vice chairman of the Morris County Railroad Transportation Association.

At the meeting I proposed, and the group agreed, that the U.S. Senate should undertake a friendly inquiry into the reasons why the Port of New York Authority has found it impossible, to date, to undertake any role in solving our mass transportation problem.

The purpose of such an inquiry, which, I hope, could be undertaken by the Senate Commerce Committee, would be to place on the public record steps which might be taken both by the railroads and the port authority to get this job done. Under no circumstances would such an inquiry be a punitive one, and for this reason, I believe the port authority would welcome the opportunity to air its views.

Subsequent to our meeting, I received resolutions from the executive committee of the Morris County Railroad Transportation Association and the Inter-Municipal Group for Better Rail Service, both of which I ask unanimous consent to be printed in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE EXECUTIVE COMMITTEE, MORRIS COUNTY RAILROAD TRANSPORTATION ASSOCIATION, ADOPTED MARCH 24, 1960

Whereas the residents of Morris County, N.J., are dependent on suburban railroad passenger service because of the distance to New York; the highway congestion; and for other economic and social necessities; and today these taxpayers are faced by the threat of the discontinuance of this essential public transportation service unless the

existing inequities and discriminatory practices against the railroads performing this needed service are ended and without further delay; and

Whereas the existing inequities and discriminatory practices have caused the railroads a great loss of revenue because of the fact that competitors have been able to take much freight and passenger traffic from the railroads, due to the modern, tax-free facilities and services provided for their use by the Port of New York Authority, which has done nothing comparable or of benefit to the injured railroads; and

Whereas the original bi-State pact which created the Port of New York Authority, and subsequent legislation relating to that body, all of which were approved by the Congress of the United States, have, among other matters, charged the said Port of New York Authority with the duty of developing, improving, coordinating, and making better use of the existing facilities, equipment, and services of the railroads which are located in the area, but to date the Port of New York Authority has failed to take constructive action to comply with the legislative mandate; and

Whereas it appears that the failure to do so is in a large measure due to a lack of desire, both by the Port of New York Authority and by the railroads in the area, to get together, to cooperate, and to work harmoniously and constructively for the desired objectives; and

Whereas the presently existing lack of cooperation between the Port of New York Authority and the railroads, is contrary to the national and public interest, and should not be permitted to continue: Now, therefore, be it

Resolved by the Executive Committee of the Morris County Railroad Transportation Association, That inasmuch as the original bi-State pact, and the proper development of the port of New York, including the railroad freight and passenger facilities and services within the port district are matters of great importance to the United States of America, we do respectfully request our U.S. Senators, the Honorable CLIFFORD P. CASE and the Honorable HARRISON A. WILLIAMS, JR., and our 14 Representatives, Members of the House of Representatives, to initiate the action necessary to hold a public hearing in Washington, for the purpose of ascertaining and getting on the record the specific reasons of the Port of New York Authority for its failure to comply with the mandate contained in the bi-State pact, and subsequent legislation requiring it to work for the development and improvement of existing railroad facilities and services within the port district, and be it further

Resolved, That the railroads operating within the port district be asked to attend the hearing, and there give their reasons for any failure to cooperate wholeheartedly with the Port of New York Authority in seeking to achieve these desirable objectives, and be it further

Resolved, That since this matter is of grave importance to the national as well as public interest, that the hearing be held as expeditiously as possible, and that interested official or public groups be invited to attend.

THOMAS T. TABER,
Chairman.

Attest: JOHN H. ZIEGLER,
Secretary.

RESOLUTION OF INTERMUNICIPAL GROUP FOR BETTER RAIL SERVICE ADOPTED

Whereas the municipalities of Union, Somerset, and Middlesex Counties, their residents and taxpayers are confronted with an increasingly serious threat of loss of passenger rail service unless certain inequities and dis-

crimination treatment under which railroads now operate and compete with other forms of subsidized transportation are remedied without delay; and

Whereas the Port of New York Authority was charged by the original compact between the States of New York and New Jersey and the enabling legislation adopted by the legislatures of both States and approved by the Congress of the United States with the duty, function, and purpose of promoting the development of passenger and freight rail service as well as other means of transportation; and

Whereas, according to charges and claims made by the Port Authority, it has made numerous efforts and advanced many proposals to the railroads serving the New Jersey-New York area for more efficient and economic operation during the past 28 years all of which have been rejected or frustrated by said railroads; and

Whereas the railroads serving the New Jersey-New York area have on numerous occasions charged and claimed that the Port Authority has failed to cooperate with or assist the rail carriers but, in fact, has in many ways aided competing forms of transportation, to wit, busses, trucks, and airlines; and

Whereas the lack of cooperation between the Port Authority, which has demonstrated its constructive capacity in the promotion, development, and operation of transportation facilities other than rail, and the railroads, whose existence depends on their enterprise and capacity to carry out their functions and duties in meeting transportation needs, passenger as well as freight, of the public in the area served by them, has contributed to, and, indeed, caused the passenger transportation crisis in the New Jersey-New York area; and

Whereas there is much that can and should be done by the Governor and legislature of the State of New Jersey to ameliorate the crisis, the problem is essentially one that affects interstate commerce between New York and New Jersey and other States served by said railroads, and demands the attention of the Federal Government and more immediately the Congress and its appropriate committees; and

Whereas the continued impasse between the port authority and the railroads has a harmful effect upon the economic welfare of the most densely populated area of the country as well as upon the national security; and

Whereas representatives of the Inter-Municipal Group for Better Rail Service, representing municipal governments in Union, Somerset and Middlesex Counties, on March 16, 1960 met and discussed the impending passenger rail service crisis in this area with the General Doyle and his staff of the Study Group of the Senate Committee on Interstate and Foreign Commerce, and later with the Honorable CLIFFORD P. CASE, senior Senator from New Jersey; and

Whereas Senator CASE at said meeting indicated the desirability of an effective public hearing at which the Port Authority would be afforded an opportunity to explain or justify its policies and efforts with respect to complying with the mandate of the legislation creating it relating to railroad passenger as well as freight service, and

Whereas, to obtain a full public airing of the apparent feud between the port authority and the railroads, it would appear necessary to have the railroads appear at such a hearing to present their explanations and justifications, if any: Now, therefore, be it

Resolved,
1. That Senator CASE be commended for taking the initiative in recommending a hearing for the purpose of publicly recording the Port Authority's reasons for not comply-

ing with its statutory duty in the field of rail passenger transportation.

2. That such a hearing should be expanded to afford the opportunity to the railroads serving the New York-New Jersey metropolitan area to explain their position with respect to cooperation with the Port Authority.

3. That such hearings be scheduled at an early date in view of the emergent nature of the problem involved.

4. That the Honorable HARRISON A. WILLIAMS, JR., the junior Senator from New Jersey, who has shown a sympathetic interest in the rail problem be requested to give his full support to the calling of such a hearing without delay.

5. That all members of the House of Representatives from New Jersey be requested to join in the efforts of Senators CASE and WILLIAMS to bring about an early airing of the feud between the Port Authority and the railroads which has adversely affected the public interest.

The Reverend Dr. James Iley McCord Inaugurated as Fourth President of Princeton Theological Seminary

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, yesterday afternoon the Reverend Doctor James Iley McCord was inaugurated as the fourth president of Princeton Theological Seminary, in Princeton, N.J.

Representatives of more than 100 colleges, universities, and theological schools attended the ceremonies, which were held in the chapel of Princeton University. Among those present were Governor and Mrs. Robert B. Meyner and most of the leaders of the United Presbyterian Church in the United States.

Among the speakers was Dr. Robert F. Goheen, president of Princeton University, who hailed the new climate in which theology is no longer excluded from university life.

Dr. Goheen also pointed out the interrelationships between the various scholarly disciplines as taught in colleges and universities these days, noting that students of Chaucer were now reading St. Augustine, and that Greek drama is no longer viewed wholly as a secular art form.

I include two articles from the New York Times of March 30, 1960, which report on the inauguration of the Reverend Dr. James Iley McCord as fourth president of the largest training school for ministers of the United Presbyterian Church.

McCord Installed in Princeton Rite—THEOLOGICAL SEMINARY OF THE PRESBYTERIAN CHURCH GETS FOURTH PRESIDENT
(By George Dugan)

PRINCETON, N.J., March 29.—The Reverend Dr. James Iley McCord was inaugurated here this afternoon as the fourth president of Princeton Theological Seminary.

Representatives of more than 100 colleges, universities, and theological schools clad in

academic gowns marched in solemn procession and then heard the 40-year-old, Texas-born clergyman accept his investiture as the head of the largest of the Presbyterian Church's eight seminaries.

The ceremony was held in the chapel of Princeton University, although the seminary has no official connection with the college. Its locale, however, was significant in that in most of the preinaugural functions the theme of increasing friendly relations between seminaries and universities was uppermost.

At a dinner last night in the Princeton Inn, Dr. Robert F. Goheen, president of Princeton University, hailed what he described as a "new climate" in which theology was no longer excluded from university life.

INTEREST SEEN SHIFTING

He said that while he detected no "sweeping urge to worship" there was a "significant rehabilitation" of theological pursuits.

In this connection Dr. Goheen noted that students of Chaucer were now reading St. Augustine and that Greek drama was no longer viewed wholly as a secular art form.

Another speaker at the dinner, Dr. Charles Taylor, director of the American Association of Theological Schools, spoke in a similar vein. He pointed out that a seminary "needs a university as much as a university needs a seminary."

Among the dinner guests were Gov. and Mrs. Robert B. Meyner and most of the leaders in the 3,000,000-member United Presbyterian Church.

As fourth president of Princeton seminary Dr. McCord succeeds the Reverend Dr. John Alexander Mackay, who served in that capacity from 1936 to 1959.

Between 1902 and 1936 the seminary had two presidents, Dr. Francis Landey Patton and Dr. Joseph Ross Stevenson.

From 1812, the year of the founding of the institution, until 1902 the seminary was administered by the chairman of the faculty.

In his inaugural address this afternoon, Dr. McCord echoed some of last night's observations.

Princeton seminary, he promised, is committed to the "closest cooperation possible with the university and other institutions and to doing its part in building up the strongest possible intellectual community."

He expressed the conviction that "we are entering a new stage in the evolution of the theological seminary in American higher education and in the life of the church."

"The period of relative isolation and protection, when seminaries were expected to live a sheltered existence, has passed," he asserted, "and we are challenged to emerge into the world, with confidence and integrity, and to work out our authentic role vis-à-vis the church, the academic world, the new age that is dawning and the ongoing theological task."

Inevitably, Dr. McCloud said, adjustments will involve "nothing less than a basic rethinking of all our patterns and habits and a willingness to give up vested interests, no matter how dearly purchased, in order to achieve the best possible result."

"PERSONAL DIMENSION" ASKED

He urged a restoration of the "personal dimension" to theological education that would make possible a "continuing dialog between student and teacher."

In addition to the dinner, the preinaugural activities included a service of worship this morning, a seminar on the relation of the seminary to the church's mission and a lecture by the Reverend Dr. H. Richard Niebuhr of the Yale Divinity School.

Before coming to Princeton Dr. McCord was for 15 years dean and professor of systematic theology at Austin Theological Seminary, Austin, Tex.

He was graduated from Austin College and later attended Union Theological Seminary in Richmond, Va. He received his divinity degree from Austin Seminary.

He is married to the former Hazel Thompson of Sherman, Tex. They have three children, one son and two daughters.

OPEN-DOOR THEOLOGIAN—JAMES ILEY McCORD

PRINCETON, N.J., March 29.—The Reverend Dr. James Iley McCord, who was inaugurated today as fourth president of Princeton Theological Seminary, is a rare theologian. He makes sense to his theological peers as well as to the man in the pew. Last fall when he came to Princeton seminary as a successor to the Reverend Dr. John Alexander Mackay, Dr. McCord was just 39 years of age, one of the youngest men to head a major seminary. He observed his 40th birthday last November.

As president of Princeton seminary, Dr. McCord, who likes to be called Jim, holds down one of the top posts in Presbyterianism. The seminary here is the largest of the church's eight training schools for ministers.

President McCord is a pipe- and cigar-smoking theologian with a bouncy personality that unfortunately is seldom associated with church leaders. Some of that personality will help to raise millions of dollars for the seminary.

CAMPUS "WHEELS" HAPPY

Built like a football tackle, Jim McCord lives on campus in a beautiful old Gothic cottage called Springdale that he and his personable wife Hazel have completely rehabilitated.

The McCords have three children: Vincent, 16, a junior at Phillips Exeter Academy, and two daughters who go to high school here, Allison, nearly 15, and Marcia, 13.

Campus "wheels" are happy about Dr. McCord. They say it by praising new faculty appointments and dreaming about new buildings.

One of them noted today that the new president always had a hearty hello and that his door was always open, not only for outgoing decisions but also for incoming requests for guidance and counseling.

Before coming to Princeton Dr. McCord was for 15 years dean and professor of systematic theology at Austin Theological Seminary in Texas. A native Texan, he was graduated from Austin College, attended Union Theological Seminary in Richmond, Va., and took his divinity degree back at Austin seminary.

Here are some of Dr. McCord's views on theology that have made some old heads wag sadly and some new heads nod approvingly:

"Presbyterianism in the United States has abdicated theological primacy. We have not yet faced up to many of the issues raised by the 19th century, to the questions posed by the new sciences, and to the church's obligation to do her theological task for every generation. The result is that theology has become largely irrelevant in many quarters and often incredibly dull.

"The task of the church and seminary in every age is to see that the word of God is free of rationalistic accretions, traditional incrustations, human wrestling and twisting in order that it may accomplish its purpose.

"The church in her theology in recent decades has been too preoccupied with matters ecclesiastical, has become introspective, has developed an esoteric jargon, and is thus cut off more and more from the world.

"Presbyterianism is still too largely a bourgeois phenomenon. It has not yet touched the masses, nor has it challenged a rising generation of intellectuals."

San Antonio Light Answers Postmaster General on Postal Rates

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, March 30, 1960

Mr. YARBOROUGH. Mr. President, although we voted substantial increases in postal rates only last session of Congress, the administration is once again calling for another raise in postage rates.

Increases are typical of this administration. It is writing itself down in history as the administration of all sorts of rate increases—such as interest rate raises, cost-of-living rate increases, and even unemployment rates increasingly high during so-called periods of prosperity.

Recently the San Antonio Light, one of Texas' better daily newspapers, published an editorial opposing the administration's demands for postal rate raises. More importantly, it stated its reasons for its position in a forceful argument on the historic role of the post office in America. I ask unanimous consent to have printed in the Appendix of the RECORD the editorial from the San Antonio Light for March 20, 1960, entitled "Postal Facts."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POSTAL FACTS

President Eisenhower's special message to Congress urging another postal rate increase presents one of those seemingly plausible arguments which are easily demolished by facts. Let's consider the facts.

In essence, the President says the Post Office is losing a lot of money. Therefore, mail rates should be raised to wipe out the loss, or at least come close.

This position, which apparently came to the President special delivery from Postmaster General Summerfield, is based on a fallacy.

It is the error of assuming the Post Office is a business. In reality, in historical precedent, and in everyday fact, it is a public service. It cannot possibly be conducted as both.

True, it costs taxpayers money to run the Post Office Department. It also costs taxpayers money to run the White House, the Commerce Department, the Federal judicial system, the FBI—almost every Federal activity.

The costs of such public services are taken for granted, but the costs of the postal service are labeled "deficit" and become an issue.

Why? The answer is that the Post Office takes in a great deal of money, about \$2,500 million a year. No other Government department produces anywhere near as much revenue.

But because the Postal Establishment costs more to operate than it takes in, and because a law requires annual reports comparing receipts with costs, the Post Office is singled out and charged with operating at a deficit.

Postal rates actually are a form of taxes. The Post Office does not keep the money it gets for selling stamps, but turns it into the Treasury. Thus, in urging a postal rate

increase, the administration is seeking an indirect tax increase.

Finally, the theory that the Post Office is a business doesn't make sense.

Would a business charge the same fee to deliver a message across the street as it does to handle a letter from Florida to Alaska?

Would a business operate a branch office in every hamlet in the Nation, many of them losing money because of slight patronage?

Would a business take on sideline jobs without remuneration, like selling duck stamps or registering aliens?

The Post Office is an essential public service, worth what it costs to operate.

We suggest Mr. Summerfield ought to stop proclaiming (and complaining) how much his department has lost and concentrate on getting the mails delivered as speedily and economically as possible.

And Congress ought to ignore the request for another boost in rates.

Learn More About Us, Students Told by H.S.T.

EXTENSION OF REMARKS

OF

HON. W. R. HULL, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. HULL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very fine article written by Howard Hill, publisher of the Richmond (Mo.) News, and one of the ablest editors whom I know. The article describes a unique contribution to young Americans being made by former President Harry S. Truman.

The article follows:

LEARN MORE ABOUT US, STUDENTS TOLD BY H.S.T.

It is a rare privilege to be able to talk with a former President of the United States.

To be able to engage in a give-and-take discussion with the only living ex-Democratic President of the United States is an even more unusual experience.

I am a Democrat. I also believe that President Harry Truman will be accorded a place in history among our four or five greatest Chief Executives.

But after talking with Mr. Truman privately and hearing him speak on American government to the student body of William Jewell College in Liberty, I believe that all Americans, regardless of party loyalties, can agree that he is performing a valuable service to the country in what he calls his "campaign to make young people aware of their Government and history."

That was Mr. Truman's purpose in being in Liberty. He had been invited by Dr. Walter Pope Binns, president of William Jewell, to give the talk to William Jewell students that he had already given in recent months at Harvard, Columbia, California, and Southern Methodist Universities.

Displaying the experience of a real professional at talking to audiences of all types, Mr. Truman developed his theme lightly and quickly.

The student's reaction, which they showed by frequent laughter and applause, was to reciprocate Mr. Truman's wit and good humor.

But through it all his theme was serious and dignified: Americans are blessed with having the most remarkable institutions of

government in the world and young Americans should know more about them.

Mr. Truman's exceptional knowledge of American history and the history of American political development was demonstrated very quickly.

He cited the Bible as one of the main sources of guidance for the Founding Fathers of the American Republic and urged the William Jewell students to use the Bible more for interpreting their own government.

Mr. Truman's talk was over quickly, and he got into the question-and-answer period with relish, which he readily admitted was more fun to him than any other part of the program.

The students, who were not all Democrats by any means as I learned by eavesdropping among them, were eager to ask their questions.

Mr. Truman fired his answers back with equal speed.

Once again his complete familiarity with his chosen subject was impressive.

Mr. Truman also revealed that he had a quick mind and a facility with words which was lacking in his early years as President. Later Dr. Binns and I discussed the Truman talk, and we agreed that regardless of what one thinks about his tenure as President, Mr. Truman is an exceptionally intelligent and well-informed man.

The comments of the students as they filed out of the auditorium indicated to me that they too had been impressed in the same way, although there were many who expressed their allegiance to the Republican Party.

In the long run, Mr. Truman's conviction that young Americans should in these times know more about their government, and his determination to do something about it, may be his greatest contribution to American history.

Improving and Expanding National Library Program

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 30, 1960

Mr. WILEY. Mr. President, as our Nation—and its people—face the problems of today and the challenge of the future, the libraries of America, I believe, play an increasingly important role.

For the third consecutive year, observances will be held, April 3 to 9, in recognition of National Library Week throughout the country.

What is National Library Week? The objective is a better read, better informed America. Among the meritorious goals, the program attempts through national and local events to:

Provide a dramatic focus for continuing community reading development programs throughout the year. Among the 5,000 communities participating in Library Week last year, most have undertaken long-range programs.

Attract wide attention to library services. Last year, 10, 20 and 30 percent increases in library circulation and registration figures were consistently reported; many libraries reported record

breaking circulation leaps of 40 and 50 percent.

Increase awareness of the importance of libraries as a major community resource and build support for their expansion.

Foster reading activities in homes, schools, clubs, businesses. Last year, Library Week attracted the participation of the entire public school systems; hundreds of colleges and universities; local chapters of organizations of all kinds including women's clubs, fraternal and business organizations, religious groups.

Inspire more people to more thoughtful reading.

As we know, the Library Services Act, adjusted in 1956, provided assistance through Federal funds to help expand our library services. Providing a shot in the arm to State and local efforts, this legislation has contributed to the following achievements:

Thirty million rural people now have new or improved services available as a result of this cooperative State-local-Federal program.

Approximately 200 new bookmobiles are traveling rural routes bringing brightness and information to people in remote areas.

Over 200 separate project activities to extend and develop rural library services were included in plans for 1959.

Although these are only a few of the accomplishments, they represent the kind of constructive work being carried forward in this field.

However, there is still a good deal of work to be done. For example, 25 million people in rural areas in 1959 still are without any public library service; 21 million more still have had no opportunity to benefit directly by cooperative local-State-Federal library development projects; and 253 counties still have no public library service within their borders.

In the face of these challenges, we recognize that there is a real need for further improvement and expansion of our library service program.

As I understand it, consideration is now underway in committees in both the Senate and House of Representatives.

Recognizing the merits of this program, I believe the Congress should: First, approve adequate funds—at least at the \$7.5 million level—to assist State and local efforts in meeting present needs as well as expanding services for the future; and, second, establish the program on a longer range basis—up to 5 years—to enable States and local communities to undertake extended plans to provide better library service for our people for the future.

I want to emphasize, however, that realistic expansion of such services cannot be accomplished only by appropriation of funds. Rather, the program needs the guidance of farsighted, constructive, creative individuals dedicated to their profession. Particularly, the librarians themselves are now serving as inspirational leaders in this field.

Recently the American Library Association bulletin published a constructive

and informative article by Margaret R. Thoreau, an outstanding librarian of the La Crosse Public Library, La Crosse, Wis. The article delineates the splendid way in which the services of the library are being creatively utilized to serve the public in that fine community.

I ask unanimous consent to have the article for National Library Week, entitled "A Local Library Goal of the Public Library of La Crosse," printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NLW AND LOCAL LIBRARY GOALS—1959 IN LA CROSSE

(By Gertrude R. Thuro)

What is there about National Library Week that sets it apart from the host of national weeks, such as Pickle Week, Pencil Week, Domestic Rabbit Week, Smile Week, or any of the other 85 national weeks sponsored by the trade promotion division of the U.S. Chamber of Commerce and the Advertising Council? One salutary feature is that we create an awareness in our public for books and the manifold resources and services of the library, but equally important are the unique opportunities this special occasion provides for the library to recognize, pay tribute to, and encourage the activities and accomplishment of individuals who have furthered the cause of education and merit special community awareness.

A COMMUNITY SEAWAY PROGRAM

How to proceed in planning such a program? Coupled with community sensitivity and an awareness of its resources and talents are the needs expressed, the needs implied, the needs unmet, in addition to experiences shared. In La Crosse, sharing became the keynote. A member of one of our adult discussion groups insisted at the program planning meeting that one program be included on the St. Lawrence Seaway and its implications for La Crosse. The expressed need was accepted, but this program was deferred until spring because much new seaway material was just then becoming available.

And then we conceived the idea. It is this library's policy to plan larger public information programs on new subjects or those on which the community desires more information, whether it be a city manager workshop type of program or one on understanding the satellites. Here was the need for seaway information so we asked the adult discussion group if it would share this meeting with the community. They liked the idea. We wrote, among others, to the St. Lawrence Seaway Development Corporation at Messena, N.Y., for literature, and contracted with them for the film "The Fourth Seaway"; but better still, we had a natural for a speaker on the subject. Senator ALEXANDER WILEY was actually "The Father of the Seaway"; furthermore here was a Senator who had always espoused the cause of education and libraries loyally and vociferously. He was the man in whose honor the channel had been named the Wiley-Dondero Channel, but Wisconsin had not generally acknowledged his great efforts in behalf of this project. All it required was a letter. Senator WILEY agreed to speak if the meeting could be held before the Easter recess. Thus we decided on a prelude for National Library Week—the week before.

A local radio station brought its mobile unit up to the station to welcome Senator and Mrs. Wiley, enabling the Senator, the librarian, and the announcer to hold an on-the-spot interview. S. Janice Kee, executive director of the Wisconsin Free Library Commission, made the opening address at the

meeting. The climax came after the meeting when the Senator's press releases, "WILEY Proposes Expansion of U.S. Libraries," went over the Nation's wire service. When all the Seaway excitement broke loose in June, with the Wileys accompanying the presidential party on the Columbine to the Seaway dedication, we in La Crosse felt that we had had a sneak preview during National Library Week.

MODERN ART

Another library-sponsored group, the Library's Modern Art Study and Discussion Group, was responsible for the next public adult program of the week. The group was challenged to assist us with a public program, accepted, and appointed three committees—one for program, one for the exhibit, and one for the reception. Walter Quirt, artist in residence at the University of Minnesota, was secured as guest speaker and presented "Art and the Community," an illustrated lecture combined with chalkboard demonstration. This was followed by an art exhibit and a coffee hour at the library. To everyone's amazement, over a hundred paintings by local artists were exhibited. Artist met artist; the public met the artists; and the artists took Mr. Quirt to their paintings to ask for constructive criticism. The general spirit of that evening and the camaraderie can be indicated but cannot be shared in an article.

The National Library Week Sunday afternoon kickoff event was an autographing party for children. Here was an opportunity to pay recognition to our area author, Emil Liers, author of "An Otter's Story," and of "A Beaver's Story" illustrated by our own local art teacher, Ray Sherin. This was no run-of-the-mill autographing party. Here were the Liers book characters—living and lively trained otters—performing their stunts. Illustrator Sherin had the original sketches and drawings, including the book jacket, on exhibit. When it became obvious that someone or something "had to give" because of overflow crowd, some adults obligingly left to make way for children and their parents.

And then there was youth. Youth in our community had been working hard for several years earning money by car wash and shoeshine projects, and with student-faculty games, to raise money for the American field service exchange program. We found five of these teenagers who had worthwhile experiences in this program, but most of our community had not realized nor profited by them. Would they do an evening program for National Library Week? In their typically enthusiastic fashion "they'd be delighted to," and they did delight. The exchange student from Germany was there; one of our girls had spent the summer in Finland, one in Switzerland, and one had been a member of the teen overseas project to Europe; a boy had been in Germany. Here were firsthand good-will builders. Here was international understanding at its best. At the conclusion of the program the adults were envying them, not only their fine experience, but their poise and dispatch in sharing them with us.

The La Crosse County youth group's water sports and water safety program was held on the Saturday of National Library Week. The fact that the librarian is a member of the Governor's Committee on Children and Youth made the library's role in this program planning an especially active one. Shortly before this meeting community agency heads from the fire department, police safety department, and Red Cross had served as preview consultants to the library for a film on rescue breathing. These men later consented to help with the youth safety program. The resuscitator squad of the fire department staged a demonstration; the police traffic and safety representative talked on rules of the water lanes and introduced

the film, "Rescue Breathing." Actual swimming pool demonstrations by youth, and rescue methods and lifesaving techniques were a novel attraction. Supplementing the program were a book exhibit, lists of safety and lifesaving methods books and materials available at the library, and a pamphlet distribution.

Three of the youth group assisted the librarian on the weekly "Your Library Speaks" radio program, which was devoted to youth on this Saturday. A half-hour telecast with patrons and the librarian discussing adult books was the adult contribution. A mobile unit broadcast from the librarian's office about National Library Week events completed the broadcast series.

HOBBY SHOWS AT BRANCH LIBRARIES

At the branch libraries the hobby shows draw an enthusiastic audience. This has become an annual spring feature looked forward to by the public and the hobbyist. With 60 different exhibitors manning their tables to explain their hobbies, share their enthusiasm, and show others which of the library's books and magazines had been most helpful in pursuing the hobby, this has become an exhilarating event. Demonstrations of weaving, fly-tying, gem-cutting, and woodcarving attracted great interest. Sharing their skills, enthusiasm, and results with fellow citizens is always the highlight, as was demonstrated when one woodcarver said to me: "I was afraid you weren't going to get here this time. I wanted you to see how much I've improved since last year. This book was a dandy guide. See, I've made this exactly like the model in the book." With this tangible proof of the efficacy of the printed word, they "sell" our books along with their enthusiasm for their hobbies. At one branch library the historical society put on an antique show. Since it has no museum, the society looks forward to this annual public exhibit. Here, too, the youth science exhibit projects were on display. Is it worth while? Will we continue? We almost have to until some other local group takes over, because each year the branch librarians report that people come up to them to report what they plan to exhibit the next year.

The terminal Sunday had to be included in National Library Week for the observance of the 70th birthday anniversary of the Main Library and the 90th of its forbear, the Young Men's Library Association. To our great pleasure the Business and Professional Women's Club accepted our invitation to serve as hostesses for the anniversary open house tea, reciprocating in a measure for a legislative workshop the library had helped them sponsor during their district convention. Their surprise for us was a unique centerpiece—a huge birthday cake in the form of an open book with the names of the five head librarians inscribed with frosting on the open pages. As if this were not enough, they said that they had never been more proud of any public project they had undertaken.

THEN THERE WAS MUSIC

Music finally came into its own at this program when the local college octette performed, and our local pianist, Don Jonson, recently returned as a Ted Mack semifinalist, rendered several piano numbers. Heartening was his declaration that it was finally his "privilege at last to do something for the library which has served me for so many years."

Reflections and evaluations after the week found the librarians humbly grateful. National Library Week had truly been citizen's week in our city. The library was the innovator, leading and suggesting, but the citizens came to the fore with the actual execution of the projects that went into making our continual library objective of adult

learning through libraries a vital force. Our patrons and friends were selling our wares all week in a myriad of living demonstrations. Implicit in all of the activities was the fact that books and the printed word are basic and vital, but they also illustrated how the educative process can be stimulated and vitalized with the aid of films, lectures, discussions, exhibits and hobbies, demonstrations, and radio and TV broadcasts with art and music.

It made us realize how important it is to keep mending and improving this two-way highway on which the library goes out into the community to serve it, with the citizens and friends of all ages and talents coming in to us to help us with our program—citizens and friends doing the job effectively, enthusiastically, and proudly.

You and Your Future

EXTENSION OF REMARKS

OF

HON. FRANK IKARD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. IKARD. Mr. Speaker, under leave to extend my remarks in the Record, I would like to bring before the House the following material compiled by our distinguished colleague from New Mexico, the Honorable THOMAS G. MORRIS. This material will be of tremendous benefit to the many high school graduates who might otherwise not be able to continue their education. I think he should be commended for his efforts. The following represents considerable research and I consider it a privilege to have it inserted in the CONGRESSIONAL RECORD:

YOU AND YOUR FUTURE

FUTURE EMPLOYMENT OPPORTUNITIES

A democratic society such as ours is dynamic and growth is a necessary part of the system. With this growth more opportunities are available for well-qualified young people today than ever before in our entire history. Because our Nation is not producing an adequate number of men and women with sufficient qualifications, thousands of interesting and highly salaried positions remain unfilled. Let me illustrate this point with some figures: The Department of Labor surveyed 200 large firms, one-half reported they were unable to hire enough research scientists and engineers; industry needs one engineer and five highly trained technicians for every 40 workers; in 1958-59 it is estimated we were short 135,000 qualified teachers; the journalism and newspaper field has an acute shortage of qualified people.

We live in a civilization and world that requires education. Your future depends on you becoming well educated. The job applicant with advanced training will have a better opportunity to get and hold a job than his untrained fellow worker. During the most recent recession, nearly 1 in 5 unskilled laborers experienced unemployment, while only 1 in 50 professional and technical workers were jobless. White collar workers, who generally have to meet higher educational requirements, were relatively steady in their employment.

By the time you are 25, there will be millions of new job openings in our economy, but most of them will go to persons with a solid educational background. There will be a decline in the number of jobs for unskilled workers and it is estimated that

the United States will have one-half million fewer such workers in 1967. Irregular employment and lower wages will face the uneducated in the economy of the future. Yet past experience shows us that many of the 2 million high school graduates of 1960 will not go on to college, and will slip out of the stream of education. In fact, only 45 percent of those who graduate are expected to continue their formal education, either in an institution of higher education or business or vocational school. Are you to be in the 55 percent group and let your education stop?

The Department of Labor estimated that in the next 10 years, business and industry will need about 13½ million additional workers, including 5.1 million skilled and semiskilled workers, 3½ million professional and technical workers, and almost 6 million managerial and other white collar workers. By 1965 there may be a shortage of skilled workers and because of this gap, rapid advancement will be possible for workers with good preparation. In addition to those needed for replacement, we will need 45,000 new doctors, 75,000 college-trained nurses, 485,000 more elementary and high school teachers, 120,000 more college teachers, 80,000 more natural scientists and 100,000 engineers. Education will be the foremost qualification for these additional workers.

The desire for you to get a job this summer and forget about higher education will be appealing but let me remind you that your economic gain and social satisfaction are merely temporary. The 1960's hold the promise of a decade of historic significance in the development of this Nation and in achieving a better way of life for our citizens. As tools and methods become more and more complex, they offer increasing opportunities to give a better and safer life for all. But, at the same time, they place increased demands upon the worker. He must be prepared to cope with the changes in the nature of work that new machines and methods create. With each change, he must be prepared to enlarge his own knowledge and skill to keep pace with technological progress. Education is the basic equipment which helps a man to grow with his job and to move on to better opportunities. A nuclear physicist and a tool maker need difference amounts of education but both need the same basic education. They then move on to the particular areas of study required for their respective fields. Only by becoming qualified through a better education will you insure the realization of your greatest ambition.

EDUCATION EFFECTS EARNINGS

Dr. Paul C. Glick, Chief Social Statistician of the U.S. Bureau of the Census, has analyzed lifetime earnings of American and compared them with years of schooling. The following findings show how smart it is to be educated.

Years of schooling:	Lifetime earnings
1 to 4.....	\$72,000
8.....	116,000
4 years of high school.....	165,000
1 to 3 years of college.....	190,000
4 or more years of college.....	268,000

He also found that in families headed by grade school graduates, the median annual family income was \$4,386 as compared with \$5,667 for high school graduate households and \$8,143 for college graduates. Education, of course, has far more value than a dollar tag can show. It opens the way to more interesting kinds of jobs and a much more satisfying life.

APTITUDES FOR FURTHER EDUCATION

Many students do not go on to college because they are afraid they do not possess the

necessary ability. Perhaps they are a trifle slower than their classmates in grasping things and maybe find it more difficult to comprehend the basic subjects than many of their friends. Those of you who feel this way may, after reading the foregoing statements, think more strongly than ever that there is no place for you in the upper echelons of our highly complex society. Nothing could be further from the truth. Read the following.

Dr. S. Strauss, a teacher in Washington, D.C., conducted a study of the backgrounds of more than 600 Americans who were awarded the Ph. D. degree in recent years. He found that 43 percent had a high school IQ below 120, and several were down in the 90's. One boy with a reported IQ of 94 had been placed in a nonacademic program in his high school by a counselor. Dr. Strauss found that two-thirds were below the top 5 percent of their class, and one-half were below the top 10 percent. He hates to make a sweeping generalization but is inclined to believe that academic progress can be stated as a formula: ability plus effort equals success. The greater the ability, the less effort is needed, and vice versa.

Many an able youth never continues his education because he is unwilling to subject himself to the necessary rigorous discipline or because he strives for other goals. I hate to think of the talent that is wasted because individuals underestimate their abilities. You should consider the above before deciding not to continue your education. If you have average abilities and are willing to work hard at your studies, there is a future and a college for you. Just because a student has to work harder than many of his fellow students does not mean that he shouldn't plan to continue his schooling. On the contrary, very often the so-called slow student outstrips his more gifted classmates, simply because he has to work harder to get what he seeks. So, don't give up. Concentration and effort are, in themselves, qualities in great demand.

PAYMENT OF EXPENSES

It is true, costs of attending a college or university have increased a good deal and particularly in the last 10 years. Many students and families, after looking at the cost of a 4-year college education, are inclined to give up the idea of going to college. However, never before have so many sources of money been available to assist students in meeting expenses. Scholarships, loan funds, and gratuities are available by the thousands, ranging from small prizes offered by a local organization to fellowships worth several thousands of dollars. About one student in five receives scholarship aid in some form from universities, colleges, foundations, private organizations, labor unions, and Federal and State legislatures. During 1959-60 more than \$120 million is available for assistance to students. In actual practice, a large number of the available aids go unclaimed. The interested and qualified student who conducts an exhaustive search can usually find a program either general enough or tailored to fit his own need. The ultimate benefit will outweigh the difficulties of obtaining aid.

PART-TIME WORK

Most of the colleges give part-time jobs to deserving students who are not able to meet all expenses. In fact, more students earn part of their college expense by on-campus jobs than the number receiving institutional scholarships. In New Mexico during the 1955-56 school year, 1,758 students earned an average of \$355 per month on part-time jobs while only 1,165 scholarships were given with an average of \$207. Indeed, one of the most effective ways a student may earn money for his college education is through summertime employment.

DEFERRED PAYMENTS, "LEARN NOW—PAY LATER"

Since the burden of paying higher costs for an education at a college or university is much greater today, some colleges have seen their need to allow payment of expenses on an installment basis rather than in a lump sum. Generally, tuition must be paid at registration unless special arrangements have been made with the institution. However, nearly all room and board charges may be paid in installments. There are several tuition payment plans that help parents meet college expenses on a monthly basis, such as the Tuition Plan, Inc., 347 Fifth Avenue, New York 16; Insured Tuition Payment Plan, 112 Water Street, Boston 9, Mass.; Midland Time Plan for Education, Marine Trust Building, Buffalo 5, N.Y. Certain banks have also made arrangements for deferred payments with colleges in their communities; for example, the Indiana National Bank, in Indianapolis, has a system where the parent contracts to pay a fixed amount monthly and the bank meets all the college bills when due, up to a certain amount, with payments spread over a 6-year period.

CHILDREN OF VETERANS

Children of veterans who died as a result of disease or injury incurred while in service should write to the New Mexico Veterans Service Commission, Santa Fe. If service was entered from New Mexico, free tuition to New Mexico State schools plus \$300 maximum for matriculation, board, room, fees, books, and supplies is offered to those selected on basis of need and merit. National scholarships available for children of veterans are described in the booklet, "Need a Lift?" which may be obtained by sending 15 cents (to cover the cost of printing and postage) to the National Child Welfare Division, the American Legion, Indianapolis 6, Ind. For scholarships and funds on the State level, contact the American Legion, 3205 East Central Avenue, Albuquerque.

NATIONAL DEFENSE EDUCATION ACT

Previously, undergraduate eligibility for Federal support for educational purposes was determined almost exclusively by past military service, commitment to future service, or orphanhood resulting from a parent's death from service-connected injury or disease. These are all still available to those who are in these categories. However, under the new National Defense Student Loan Program, any student who is enrolled on a full-time basis can apply for a loan. It is up to the college to set its own eligibility, but financial need and ability to make good marks are important items that each institution considers. Those students who plan to study teaching, science, mathematics, engineering or modern languages are given special consideration. There is a limit of \$1,000 for each school year and \$5,000 for an entire college career, however, it is likely that most loans will be in small amounts. One can repay the loan in installments, starting a year after training is finished and be repaid within 10 years. If you become a full-time teacher in a public elementary or secondary school, the loan will be cancelled out at 10 percent for each year you teach, up to a maximum of 50 percent. The interest on the loan is 3 percent starting when the repayment schedule begins. Further information may be obtained from the college you elect to attend.

As of February 29, 1960, New Mexico institutions had made loans totaling \$289,230 to 742 students. The 1959-60 school year allocation to New Mexico under the law is \$149,545, matched in part by the universities.

FEDERAL STUDENT TRAINEES

The Federal Government participates in and operates certain educational programs in a wide variety of national and interna-

tional educational activities. However, other than the Education Act, nearly all of the foreign and Federal Government programs require college work before consideration is given. After you have entered college, more information concerning advanced Government programs can be obtained from the dean of students of the Government department responsible for the area of study in which you are interested.

The Government does have a cooperative work-study program which provides an integration of academic study with practical work experience and training on the job in an organized program, usually of 5 years duration, under which students alternate periods of attendance in college with periods of employment. In addition, there is another program which is the vacation work-study plan, where the student is employed by a Federal agency during the vacation period in locations throughout the United States, with offerings in nearly every field imaginable. These programs give you the opportunity to work under the guidance of professional personnel and help you decide if a particular field is all that you had hoped it would be. Interested students should contact your nearest civil-service office for further information and watch for trainee examination announcements.

There is a student Army nurse program that is available during the third year of a 3-year nursing program or for the third and fourth years of a 4-year training program. Participants are able to continue their education while receiving full pay and allowance as either officers or enlisted personnel in the Army Reserve. For further information write to the Surgeon General, Department of the Army, Washington 25, D.C.

NATIONAL APPRENTICESHIP PROGRAM

Apprenticeship training is a practical answer to the need for maximum development of skills and technical abilities. Training in the skilled trades is good insurance.

New Mexico has an apprenticeship law which provides for a statewide apprenticeship program. The law is administered by the Labor and Industrial Commission, Santa Fe, and a management-labor council act on policies, with the entire program an integral part of the national program.

There are more than 90 apprenticeable trades, most require at least 3 years training and many others 4 or more. In New Mexico we have more than 900 in the building-trades program, and only 155 in other trades such as machinists, printers, electrical workers, pressmen, and auto mechanics.

The need for skilled workers and technicians is pressing. Those of you who want to learn a special skilled trade, receive training, while earning and working, contact the Labor Commissioner, New Mexico Apprenticeship Council, Labor and Industrial Commission, Post Office Box 1726, Santa Fe, or State Supervisor, Bureau of Apprenticeship and Training, Department of Labor, room 234, 610 Gold Avenue SW., Albuquerque.

LOAN FUNDS AND SCHOLARSHIPS

You should establish your eligibility to enter the school of your choice and then qualify your financial need if some form of educational aid is required. You or your parents should be prepared to supply evidence that such a need is the case. The college bulletin or catalog lists scholarships and funds available. If more information is desired, ask the dean of the college you plan to attend what is available in the way of scholarships, loan funds, and student employment. However, remember that many awards are made on national scholastic and competitive standing, such as the National Merit, Westinghouse Science, and the General Motors scholarships.

Loan funds, either emergency or long-term up to a year, are maintained by most colleges to assist worthy students, who have evidence

of ability to repay. Agreements usually have to be assigned. It is well to remember that many banks will make loans for tuition, room, and board to students who demonstrate ability and promise.

It is difficult to list all of the many different funds available, with so many varied requirements, all of which are changing constantly. For example, Yale has available funds for boys whose last name is DeForrest; the University of New Mexico has a scholarship for a worthy graduate of a New Mexico high school who is selected on the basis of financial need, interest in engineering, high-school record, and participation in athletics. New Mexico State University awards a scholarship annually to an entering freshman who majors in the dairy field. At Eastern New Mexico University, certain honor students are selected to receive scholarships; New Mexico Military Institute has a scholarship for a young man whose interest in military affairs will assure him a commission; New Mexico Highlands University awards a scholarship to an outstanding high school student who is planning a teacher career. New Mexico Institute of Mines and Technology awards a full tuition scholarship to entering freshman who have shown superior scholastic ability in high school. To students who show an active interest and ability in drama, New Mexico Western College grants tuition scholarships; St. Michael's College has provision to assist students who have the intellectual ability to do college work but lack adequate finances. College of St. Joseph administers a scholarship based on a competitive examination.

In addition, the International Mineral & Chemical Corp. in Carlsbad offers a \$600 4-year scholarship to a resident of Eddy County; Jones Graphic Arts Products Co. of Albuquerque gives a tuition scholarship to a high school graduate from New Mexico or Arizona; the New Mexico Library Association in Roswell, gives a \$300 scholarship to a girl interested in the field of library work; New Mexico Motor Carrier Association in Albuquerque gives two competitive scholarships of \$500 each to qualified applicants planning to attend New Mexico colleges. The AFL-CIO gives six full scholarships, administered by the National Merit Council, three of which are limited to members' children. These are only a few of the many and varied funds available.

It is not necessary for the applicant to have a brilliant high school record. Frequently, the chief purpose of a scholarship fund is to assist a student who has a good, but not necessarily outstanding record, and who can be expected to profit from a college education but is prevented for economic reasons from obtaining one.

After looking over the array of opportunities for scholarships, I suggest you investigate those for which you have a special qualification of special interest. As an example, the education and manpower committee of the New Mexico section of the American Chemical Society sponsors awards to the students making the three top grades on a chemistry examination administered by the New Mexico Institute of Mining and Technology and given by the local high school science teacher. Sears, Roebuck Foundation provides scholarships for freshmen students majoring in agriculture or home economics, who would have had financial difficulty in attending college. This scholarship is administered by the New Mexico State University.

Loans are available to those students who desire to become nurses but lack funds. Write directly to the Bergen Foundation, 6536 Sunset Boulevard, Hollywood 28, Calif., after you have established that you meet the entrance requirements of the hospital where you want to train. The Committee

on Careers, National League for Nursing, 10 Columbus Circle, New York 19, has valuable information for prospective nurses. The University of New Mexico has a College of Nursing and several scholarships are available. Contact the dean, College of Nursing. The College of Pharmacy grants freshman scholarships to New Mexico high-school graduates who enter the pharmacy program at the university. For information, apply to the dean, College of Pharmacy, University of New Mexico. The National Foundation, 800 Second Avenue, New York 17, offers 4-year college scholarships for graduating high school seniors entering accredited B.A. programs in physical therapy, occupation therapy, or professional nursing.

Perhaps the State department of education in Santa Fe can give you additional information concerning scholarships and loan programs designed for students planning to become teachers. For those interested in medicine, you should contact the State board of health in Santa Fe or, for more detailed information, the Association of American Medical Colleges, 2530 Ridge Avenue, Evanston, Ill. In most medical schools, there were loan funds available in excess last year. However, bear in mind that you have to be accepted by a medical school before most of the loan funds and scholarships can be considered.

For information relating to foreign scholarships, write to Information and Counseling Division, Institute of International Education, 1 East 67th Street, New York 21.

ARMED FORCES EDUCATION AND TRAINING PROGRAMS

U.S. service academies: Because the opportunities afforded by each academy are as varied as the service they represent, interested students should write to the following:

Army: The Registrar, U.S. Military Academy, West Point, N.Y.

Air Force: Director of Admissions, U.S. Air Force Academy, Colorado Springs, Colo.

Navy: Chief of Naval Personnel, Navy Department, Washington 25, D.C.

Coast Guard: The Commandant, U.S. Coast Guard, Washington 25, D.C.

Merchant Marine: Registrar, U.S. Merchant Marine Academy, Kings Point, N.Y.

January or February is usually the deadline for applications for the next school year for most of the academies. However, the student who prepares himself beyond the high school level will be in a better position to compete for the entrance examinations for future years. In fact, many of those accepted for some of the academies have had training beyond high school.

Reserve Officers Training Corps. Several universities have established ROTC Units, with a program of instruction that leads to a commission as a second lieutenant, as you receive your college education. For more detailed information consult the college catalog.

INDIAN STUDENTS

"Higher Education Aids for Indian Young People" is the title of a pamphlet which outlines all available financial aids for Indian students. It can be obtained without charge from the Haskell Institute, Bureau of Indian Affairs, Lawrence, Kans.

The Federal Government, through the Agency Office, Bureau of Indian Affairs, administers three means of assistance. Grants: Each area annually grants small supplementary aids to those who have good records and who need assistance. Working scholarships: There are boarding schools located near colleges which furnish room and board in exchange for 14 hours of work each week. One is located in Albuquerque. Education loans are maintained for emergency cases.

For girls who are financially unable to pursue nurses' training, scholarships are given by the National Society of the Co-

lonial Dames of America. Contact your Bureau of Indian Affairs for complete information. The Indian Board of Home Missions of Congregational Churches of America assists Indian students without regard to religious affiliation or tribe. Many Indian tribes assist their young people. The Jicarilla-Apache has a substantial scholarship program, as do the Navajo, and Mescalero-Apache Tribes. Contact your tribal governing body.

CHOICE OF SCHOOL

The counsellor or principal in your high school is the best source of information about the choice of a college or university as well as for scholarships offered by local companies or individuals. He has an extensive file of college catalogs and other descriptive publications concerning the facilities of the various institutions. If some of the information you desire is not available through him, the references below list suggested sources of information for prospective college students, their parents and their counsellors. Consult your local library or any library in some of the larger towns for additional information.

CHOICE OF CAREER

If you are undecided as to what field you would like to enter, the American Legion booklet, "Need a Lift?" mentioned above, has compiled a list showing career organizations which will provide helpful information about job opportunities, subjects required, where to get training and other related topics. Also consult the career planning references below.

A special word for those who may be thinking of an agriculture career. Do not overlook it. It is and will remain the Nation's basic industry. Indeed, the Department of Agriculture estimates that about 15,000 new jobs are created each year for college graduates and only 8,500 to fill them. Dr. R. B. Corbett, President of New Mexico State University, recently stated, "Years ago the common saying was that engineers were a dime a dozen—there is no future in engineering. Yet today men trained in engineering are the scarcest and most demanded in our economy today." He suggests a parallel between engineering and agriculture. The manpower demand is declining in agriculture, but it is changing from a way of life to an exact science. The farmer will need to have a good working knowledge in many fields of science—chemistry, pathology, genetics, and business management. Demands for agriculturally-trained people are needed off the farm as well as on, such as agriculture research, industry, business, education, communication, conservation. There will continue to be jobs for properly trained farm youth.

Please do not forget this is only a part of the vast information available and that I am not a professional educator. The alert student requiring financial assistance to attend college or vocational school, those choosing a career or searching for a training school, will explore many sources not mentioned. Remember that many social and fraternal organizations, denominational and religious groups, foundations, professional associations, labor unions, and some of the larger industrial companies supply financial aid to worthy students.

The Future for the Aged—Social Security

EXTENSION OF REMARKS

OF

HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, the Social Security Act is 25 years old this year. Prof. Wilbur J. Cohen, who has had a great deal to do with the administration and revision of the act, has written an article for Ray Henry, summarizing social security goals for 1970.

This is the third in a series of articles which appeared in over a hundred newspapers throughout the country. I commend it to the attention of the Members:

THE FUTURE FOR THE AGED—SOCIAL SECURITY (By Wilbur J. Cohen, professor of public welfare, University of Michigan)

The financial problems of the aged, the disabled, widows, and orphans are part of a picture of persistent poverty in the midst of plenty.

The United States can, if we wish, accomplish the abolition of poverty and financial dependency before any other nation.

This objective, like flying to the moon, has been a dream in the past. There is no reason why the United States should not make as goals the accomplishment of both objectives during the 1960's.

During the next 10 years, our productivity should continue to grow due to automation, research, inventions, new processes, products and services.

Therefore, it should be possible for our country to afford improvements in our social security system from these increased resources so that every aged and disabled person will have sufficient income to enable him to live in health and decency.

I look forward to a series of legislative changes by Congress which, by the end of the decade, will result in:

1. An increase in social security benefits averaging about 40 to 50 percent above present levels so that average benefits will be about \$175 a month for a couple;

2. An increase for widows somewhat larger than the average because their incomes are now the lowest among the aged;

3. Family insurance benefits improved so that when a breadwinner dies his children will not be dependent on charity or relief?

4. The social security system taking on a major share of the responsibility of financing hospital and nursing services for the aged and disabled.

In addition, I believe the social security system by 1970 should:

1. Provide a regular income to persons totally disabled for any extended period of time, irrespective of age or type of disability.

2. Finance a disabled person's retraining so he may recover his economic security and independence.

How and why do I think all these changes will or should be made?

The decade of the 1960's should be a period of continued economic growth.

For the continued health of the Nation, we must make sure this increasing production is equitably distributed to the aged, disabled, widows, and dependent children and to the unemployed and their families.

Social security is one of the essential institutions that assures there will be a fairer distribution of goods and services in the economy. It is not a handout; it is a co-operative program that attempts to accomplish both economic and moral objectives.

Thus, it's only natural that in the next 10 years we should use the system for distributing the fruits of our increased production.

Even those who have vigorously opposed basic provisions of the program in the past will now admit it is here to stay; that it will be expanded and strengthened.

As part of the distribution of our increasing production in the 1960's, I see the social security system taking on a big share of the financing of hospital and nursing services for the aged and disabled.

Hospital costs have risen by 100 percent in the past 10 years and will probably continue to skyrocket during the coming decade. The demand by the American people for access to the highest quality of medical services will continue to grow.

By financing the increasingly heavy cost of such medical care for the aged and disabled through social security, the burden will be spread over their entire working life and over the entire Nation. And, they would have access to the medical care they need as a matter of right and not as charity.

In this way also, additional funds should become available to raise the standards of nursing home care and to adequately compensate nurses and other medical personnel. Visiting nurse services should become available to everyone who might need them. Hospital deficits should decline.

Neither the doctors, hospitals, or patients will be socialized nor will the Government intervene into the personal doctor-patient relationship. Moreover, private insurance, thrift, and private enterprise will continue to expand.

Rabbi Plaut's "The Jews in Minnesota—First 75 Years"

EXTENSION OF REMARKS

OF

HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. KARTH. Mr. Speaker, in St. Paul we are privileged to have among us a distinguished scholar and great teacher, Rabbi W. Gunther Plaut of Mount Zion Temple.

He has recently brought great honor to both himself and St. Paul by writing an important book, "The Jews in Minnesota—The First 75 Years."

It gives me a great deal of personal pleasure to submit for the RECORD a highly complimentary review of Rabbi Plaut's work which was printed in the March 18, 1960, issue of the Jewish News of Detroit, Mich.

Under leave to extend my remarks in the RECORD, I include the following:

RABBI PLAUT'S "THE JEWS IN MINNESOTA—FIRST 75 YEARS"

Jewish scholars in a number of American cities have undertaken the task of writing the histories of their communities. A number of such historical compilations already have made their appearance. The Jewish Publication Society published the history of Philadelphia 2 years ago. The Utica, N.Y., story was published recently. There are plans afoot to publish the history of Detroit Jewry.

An impressive work in this field of research is the new volume issued by the American Jewish Historical Society (3080 Broadway, N.Y. 27) on "The Jews in Minnesota—The First 75 Years," by Rabbi W. Gunther Plaut.

In a sense, the Minnesota story is a vital part of the history of the United States, in view of the important role played in American history by a number of the characters delineated in this volume.

The most important American Jewish family history recorded in this interesting book is that of the descendants of Mordecai Manuel Noah, the eminent American who served as U.S. consul in Tunis and who dreamt of establishing a Jewish State, actually setting up a foundation for it near Buffalo. While his dream never extended beyond the stage of planning and of establishing a "foundation," he is rightfully considered the first American Zionist.

Rabbi Plaut's book provides a record of the early Jews in Minnesota, the first rabbis, their successors, the institutions they established, the "spiritual journeys" of Reform, Orthodox, and Conservative Jews, the battles against anti-Semitism and the contributions by Minnesota Jewry toward the advancement of the highest American ideals of justice and equality.

Women's place in the State's history is given a due accounting.

In an epilogue, Rabbi Plaut declares that "as the 1920's marched toward climax and calamity . . . the gap between old and new settler had narrowed; soon it would disappear altogether. . . . The leadership of the community was passing into new hands; soon a different corps of men of varied backgrounds would come to the fore. Jews had begun to plan together and build together for their common needs. . . . The old neighborhoods were thinning out. As they deteriorated they would be overtaken by the process of urban renewal and people would be moving farther away from the center of town. Jewish religious life had been built on solid foundations. . . . Jews had learned their first lessons in fighting against bigotry. In the years to come this struggle would take them into the broader arenas of civil rights and human relations."

These are conclusions and analyses that can undoubtedly be applied to most American Jewish communities. Research men in many of them will find Dr. Plaut's book a valuable guide in the preparations of histories of their respective communities.

March 25: Greek Independence Day

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. CURTIS of Missouri. Mr. Speaker, March 25 is celebrated in this country and throughout the world as the anniversary of Greek independence. The struggle waged by the people of Greece over a century ago to free themselves from the oppressive rule of the Ottoman Empire served to inspire the hearts and pens of the day; their victorious struggle presaged the wave of liberal revolution that swept the continent of Europe in the first half of the 19th century. It also inspired the genius of Lord Byron, who took the struggle of the Greeks as his own.

The inspiration of that valiant people should not be lost on us today. The blessings of independence, for which they were willing to fight and die, are as real today as then. And they are as well worth fighting for now as then.

We may count this spirit of independence among the many invaluable contributions that have come to the world from Greece, contributions that span the breadth of human activity, contributions from its glorious past and from its equally illustrious present.

Hemispheric Security—Congress Must Reaffirm Our Historic Policies

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. FLOOD. Mr. Speaker, the recent tour by the President to Latin America has focused national attention on the rising dangers to the south, especially in the Caribbean. In that area the great island of Cuba, close to the United States and located on the northern Atlantic approach to the Panama Canal, have become a Soviet satellite and its Government an articulate instrument for Communist subversion in other Latin countries.

The situation thus presented has been noted and understood in high circles in our Government. This is shown by statements of the President of the United States in his address on February 24, 1960, before the Congress of Brazil at Rio de Janeiro.

In that speech he emphasized the great issue of our time, freedom or slavery and warned against return to the unenlightened system of tyranny of what he called the age-old fatalistic concept of the omnipotent state and omnipotent fate.

Then in an obvious appeal to all nations of this hemisphere, he stated that the people of the United States would consider it intervention in the internal affairs of an American state if any power, whether by invasion, coercion or subversion, succeeded in denying freedom of choice to the people of any of our sister republics. These ringing words, clearly implying a reaffirmation of the Monroe Doctrine, evoked sympathetic notes among all free peoples.

However favorably this appeal may have been interpreted, a Presidential statement to the Congress of another country is not sufficient. To be effective a declaration of such significance must be made to the Congress of the United States with a call for congressional action, and in words so clear that the entire world will know that our country is dedicated to the principles of constitutional liberty and opposed to those of the conspiratorial movement known as international communism. In default of this initiative by the President, the Congress should not wait but should give its serious consideration toward taking declaratory action in this grave matter.

Launched in 1917 in the territory of Russia by invaders from Western Europe and elsewhere, international communism has used that unfortunately dominated country as a base of operations for pro-

motion of world revolution. It also employs the national territory of Russia as a testing ground for criminal, social, and economic experiments that this system of Asiatic despotism intends to impose on the entire world.

The operations of this diabolical conspiracy are planned many years in advance by what might be called a general staff, and it is one of outstanding ability.

Applying the time-tested lessons of warfare, its strategists use the combination of hanking and conquest through subversion as the prime method for gaining power over vast areas without actual warfare. Its ultimate aim is global domination.

To illustrate, it seeks to gain control of strategic routes and areas such as the Dardanelles, the Suez, and Panama Canals, the southwest Pacific, the Near East, northern Africa, and the Caribbean.

The increased Soviet influence over the Dardanelles and Suez Canal areas was fostered by the eviction of British forces from the Suez Canal Zone and establishment of regimes in Egypt and other Near Eastern and north African countries more friendly to the Bolshevik Revolution.

In the southwest Pacific, the setting up on Amboina Island in Indonesia of a major Soviet naval intelligence base is suggestive of the famous maritime plan of the Japanese prior to World War II. It can be expected that these Soviet operators will be helping to alienate the Papuans of New Guinea from the Dutch toward Communist oriented Indonesia. The same plan of revolution will be applied to the Maoris of Tasmania and New Zealand.

These and other subversive activities in the southwest Pacific are obviously aimed at erecting a Communist controlled island barrier southeastward from Asia to separate the Pacific and Indian oceans, and toward the ultimate conquest of Australia.

In Cuba, the Communist conspiracy has secured a strategic beachhead convenient for attacks on the United States. Moreover, this was accomplished under the leadership of a man who owes his freedom to the Secretary of State of the United States who intervened in his behalf under pressures from sources not yet explained. Its purpose is the creation of more and more trouble throughout Latin America, especially in the Caribbean, and Central American countries. This we recognize as part of the often mentioned program for obtaining control of the Panama Canal.

Procurement planners tasted blood at Suez. They have now made the Panama Canal a key target for another propaganda offensive against continued U.S. sovereignty over the Canal Zone.

It thus becomes imperative that the Congress, as the ultimate authority under our constitutional system in questions of national policy, should exercise without further delay its legislative powers to promote the safety of the continental United States and, by so doing, of the entire Western Hemisphere.

The situation in the Caribbean, on which I have addressed the House many times, becomes more critical every day. There is no time to be lost. Hence, I

urge, in line with the President's declaration at Rio de Janeiro, that the Congress pass the resolutions now pending to extend the Monroe Doctrine and to reaffirm our Isthmian Canal policies.

Again I ask: "Why wait for new blows to fall?"

The indicated resolutions follow:

HOUSE CONCURRENT RESOLUTION 445

Whereas the subversive forces known as international communism, operating secretly and openly, directly and indirectly, threaten the sovereignty and political independence of all the Western Hemisphere nations; and

Whereas the American continents, by the free and independent position which they have assumed and maintained, are not subject to colonization or domination by any power; and

Whereas the intervention of international communism, directly or indirectly, or however disguised, in any American state, conflicts with the established policy of the American Republics for the protection of the sovereignty of the peoples of such states and the political independence of their governments; and

Whereas such a situation extended to any portions of the Western Hemisphere is dangerous to the peace and safety of the whole of it, including the United States; Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), (1) That any such subversive domination or threat of it violates the principles of the Monroe Doctrine, and of collective security as set forth in the acts and resolutions heretofore adopted by the American Republics; and

(2) That in any such situation any one or more of the high contracting parties to the Inter-American Treaty of Reciprocal Assistance may, in the exercise of individual or collective self-defense, and in accordance with the declarations and principles above stated, take steps to forestall or combat intervention, domination, control, and colonization in whatever form, by the subversive forces known as international communism and its agencies in the Western Hemisphere.

HOUSE CONCURRENT RESOLUTION 450

Whereas the United States, under the Hay-Bunau-Varilla Treaty of 1903 with Panama, acquired complete and exclusive sovereignty over the Canal Zone in perpetuity for construction of the Panama Canal and its perpetual maintenance, operation, sanitation, and protection; and

Whereas all jurisdiction of the Republic of Panama over the Canal Zone ceased on exchange of ratifications of the 1903 treaty on February 26, 1904; and

Whereas since that time the United States has continuously exercised exclusive sovereignty and control over the Canal Zone and Panama Canal; and

Whereas where responsibility is imposed there must be given for its effectuation adequate authority; and with respect to the Panama Canal the treaty of 1903 so provided; and

Whereas the United States has fully and effectively discharged all its treaty obligations with respect to the Panama Canal and the only legitimate interest that Panama can have in the sovereignty of the Canal Zone is one of reversionary character that can never become operative unless the United States should abandon the canal enterprise; and

Whereas the policy of the United States since President Hayes' message to the Congress on March 8, 1880, has been for an inter-oceanic canal "under American control," that is to say, under the control of the United States; and

Whereas the grant by Panama to the United States of exclusive sovereignty over the Canal Zone for the aforesaid purposes

was an absolute, indispensable condition precedent to the great task undertaken by the United States in the construction and perpetual maintenance, operation, sanitation, and protection of the Panama Canal, for the benefit of the entire world: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), (1) That the United States, under treaty provisions, constitutionally acquired, and holds, in perpetuity, exclusive sovereignty and control over the Canal Zone for the construction of the Panama Canal and its perpetual maintenance, operation, sanitation, and protection; and

(2) That there can be no just claim by the Republic of Panama for the exercise of any sovereignty of whatever character over the Canal Zone so long as the United States discharges its duties and obligations with respect to the canal; and

(3) That the formal display of any official flag over the Canal Zone other than that of the United States is violative of law, treaty, international usage, and the historic canal policy of the United States as fully upheld by its highest courts and administrative officials; and would lead to confusion and chaos in the administration of the Panama Canal enterprise.

HOUSE CONCURRENT RESOLUTION 33

Whereas there is now being strongly urged in certain quarters of the world the surrender, by the United States, without reimbursement, of the Panama Canal, to the United Nations or to some other international organization for the ownership and operation of the canal; and

Whereas the United States, at the expense of its taxpayers and under, and fully relying on, treaty agreements, constructed the canal, and since its completion, at large expenditure, has maintained and operated it and provided for its protection and defense; and

Whereas the United States, following the construction of the canal, has since maintained, operated, and protected it in strict conformity with treaty requirements and agreements, and has thus made it free, without restriction or qualification, for the shipping of the entire world; and, in consequence of which, with respect to the canal and the Canal Zone, every just and equitable consideration favors the continuance of the United States in the exercise of all the rights and authority by treaty provided, and in the discharge of the duties by treaty imposed: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That (1) it is the sense and judgment of the Congress that the United States should not, in any wise, surrender to any other government or authority its jurisdiction over, and control of, the Canal Zone, and its ownership, control, management, maintenance, operation, and protection of the Panama Canal, in accordance with existing treaty provisions; and that (2) it is to the best interests—not only to the United States, but, as well, of all nations and peoples—that all the powers, duties, authority, and obligations of the United States in the premises be continued in accordance with existing treaty provisions.

First Things First

EXTENSION OF REMARKS

OF

HON. J. EDWARD ROUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. ROUSH. Mr. Speaker, once again it is floodtime in the Midwest, and those

of us who live in the Wabash Valley are keeping our fingers crossed for fear that the uncontrolled Wabash will sweep away our topsoil, destroy our homes, and endanger our lives. Our real hope lies in the construction of projects which are approved and only need the appropriation of funds to cause flood control to become a reality for us.

I am enclosing an editorial which appeared in the March 27 issue of the Kokomo Tribune which very realistically reflects the attitude of the people of my district as well as my own on the problem of flood control and its place in our Federal program:

WABASH FLOOD PROBLEM

If cities in the Wabash River Valley, such as Peru and Logansport escape a flood this spring they will be fortunate. There is always the danger that heavy rains may come after the long seemingly endless period of snows.

In the hope of obtaining further support for flood control, Peru citizens are going to Washington on April 16 to appeal to a House Public Works subcommittee for funds to start construction of dams on the Mississinewa and Salamonie Rivers.

Funds have been approved for the planning of three reservoirs. President Eisenhower asked \$125,000 for planning a reservoir at Huntington, \$156,000 to plan the Mississinewa reservoir and \$56,000 for the Salamonie project.

It probably is difficult for areas like Miami, Cass, and Huntington Counties to understand why Federal money can be sent overseas on certain projects but not allocated here at home. Why could not some of the lesser needed foreign aid projects be eliminated and the money diverted to pressing needs of American communities like the Wabash Valley?

If it is true that large sums are wasted on some foreign aid projects, Americans cannot be blamed for wondering why the money wasn't used for some such thing as flood control here in the United States. This is true especially if heavy flooding is going to recur each year in the Wabash Valley.

In the meantime, the local communities that face the possibility of floods could take steps of their own by strengthening dikes along the danger areas.

John J. Fitzgerald

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. CANFIELD. Mr. Speaker, I feel that I am a better man for having known the late John J. Fitzgerald, a most characterful and rugged American, who had so much to do with the building of my home city of Paterson, N.J. When Mr. Fitzgerald was called away 3 weeks ago the Paterson Evening News paid him the following editorial tribute:

JOHN J. FITZGERALD

When any history of Paterson for the past 50 years is written, an imposing place must be reserved for John J. Fitzgerald, long-time secretary of the chamber of commerce, who has passed away at the age of 86.

John Fitzgerald was a dynamic figure who knew no obstacles when he charted a course of civic action. He was secretary of the

chamber when it was something less than popular and was subject to taunts by labor and Mr. Fitzgerald, by dint of his personality, rallied community strength behind it.

Keen of imagination and progressive concept, John Fitzgerald was a leader in the movements which helped bring Wright Aeronautical Co. to Paterson from New Brunswick; in the awakening of a civic consciousness to make possible erection of Alexander Hamilton Hotel and the Clark Street garage of the same name.

As an instance of his indomitable will, John Fitzgerald converted an anniversary of the electric industry into a colorful pageant of light and he had the entire city jumping with a gigantic parade, with colorful floats, and thousands participating, although there seemed to be no particular local identification with the project.

In addition to his intense pride which transcended his association with the chamber of commerce, Mr. Fitzgerald was a veritable fountain of information about Paterson and it was to him folks turned for encyclopedic intelligence about the city which gave him birth. He knew every nook and cranny and he knew its people, current and of the past.

In recent years, Mr. Fitzgerald had lived in retirement, but he continued to retain his lively interest in people and events, if only for his own keen self-enlightenment.

He was in every sense of the word a good citizen who was not content to let the tide flow without influencing its currents and its course. Thus he has left a fine impress on the community which even today affects our historical progress.

Trading Jobs for Low Wage Goods

EXTENSION OF REMARKS

OF

HON. BASIL L. WHITENER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. WHITENER. Mr. Speaker, it was with particular interest yesterday that I learned that the Japanese Ambassador has lodged a formal protest with our State and Commerce Departments in opposition to the petition that has been filed by the National Cotton Council with the Tariff Commission seeking relief from the serious condition that has been brought about in our textile economy by reason of textile imports.

Japan is one of the principal exporters of textile goods to the United States, and I regret to learn that the Japanese Government is formally pressing for a greater share of the American textile market at a time when American mills are experiencing severe economic difficulty.

It is also with a sense of regret that I note that our State Department has joined with the Japanese in opposing the National Cotton Council's petition with the Tariff Commission for relief. In that connection the Southern Garment Manufacturers Association of Nashville, Tenn., has prepared a report entitled "Trading Jobs for Low Wage Goods." The report brings into sharp focus what is taking place in our textile economy through the unrealistic attitude of the State Department with respect to textile imports.

I believe my colleagues in the House will find the report to be of great interest, and I ask unanimous consent that it be inserted in the Appendix of the RECORD.

TRADING JOBS FOR LOW-WAGE GOODS

Asserting its support of the reciprocal trade policy as interpreted by its author, the late Cordell Hull, the Southern Garment Manufacturers Association today pointed out that American workers have not much time left to decide if they want to sacrifice their high level of purchasing power through high wages and steady employment in order to save a few pennies here and there in buying foreign country low-wage-made goods. The association today released the results of a study just completed showing the effect of 1959 imports from Japan and Hong Kong of blouses, shirts, trousers, brassieres, pajamas, gloves and other similar wearing apparel which, the association stated, proved the contentions it has consistently made that a depression is in the making when the Government goes beyond the intent of the reciprocal trade program and permits the markets of a long line of industries to be taken over by foreign country low-wage manufacturers.

"In other words, Mr. and Mrs. American Workers, you are 'saving at the spigot and wasting at the bung-hole' every time you buy a foreign country low-wage-made article instead of one made in a U.S. plant."

In its detailed summary, the association shows that in 1959, based on reports made to the State Department by the Ambassador to Japan and the Consul General in Hong Kong, and reports of the Bureau of the Census, imports of these items amounted to approximately 11 million dozen, or, more than 128 million separate garments.

With the aid of skilled engineers determining the man-hours and man-days involved in the production of this enormous quantity of garments, these figures show that more than 24,000 employees would have been paid in excess of \$50 million to spend in the thousands of communities where they work, if these garments had been made in the United States, that the livelihood of some 73,000 people in the United States was affected by these imports.

Even of more alarming proportions, on the basis of an average of 250 employees per plant, the study shows that 97 plants in the United States would have been required to manufacture these garments. "This many plants would represent the entire production of this industry in the State of Tennessee, or the State of Georgia, the State of North Carolina, or the State of Texas. That many plants would represent the approximate production of this industry, in many cases, of two or more States," the association's statement related.

It was pointed out that in some congressional districts, this industry predominates in the way of employment. Thus, Members of Congress are confronted with the realization that an entire industry, sometimes the largest employers they have in their districts, are being brought closer and closer to short-time operations and layoffs, with all the economic consequences that must fall on the communities which have enjoyed the benefits of having this industry, and, in numerous instances where the community has no other means of absorbing the displaced workers, it was further said.

The association feels that it is the policy of the present administration and the reluctance of the Congress to face up to this problem that is building an economic collapse, which could easily break any day, with consequent wholesale industry stagnation in one of the largest and most vital industries in the United States, with part-time and full-time unemployment for thousands

of employees, and the crippling of hundreds of towns, particularly small communities.

"This industry and its association do not advocate unreasonably high tariffs or a policy of shutting out all competitive imports. On the contrary, this industry believes in, and supports, the reciprocal trade policy championed by the late Cordell Hull as being a healthy program for the economy of the United States and all nations participating therein, but that belief and advocacy is based on the true intent of the reciprocal trade program as enunciated by the late Mr. Hull, a policy that did not contemplate total submission of our markets to the demands of foreign country low-wage manufacturers, and consequent demoralization of hundreds of American communities, unemployment of thousands of workers, destroyed purchasing power, forcing American manufacturers to transfer their plants and capital to these foreign low-wage countries or quit business entirely," the association emphasized.

SUMMARY

Total imports from Japan and Hong Kong, January-December 1959 (blouses, shirts, trousers, brassieres, gloves, etc.)

For the period January-December 1959, Japanese and Hong Kong imports of the above items amounted to 10,704,652 dozen or 128,455,824 units.

Total direct labor man-hours to produce the above quantity of apparel items are 37,451,629, which represent 4,681,454 man-days. On the basis of 50 weeks of production, it would require 18,726 direct labor employees to produce the above quantity. On the basis of \$1 per hour labor, the payroll would be \$37,451,629.

Five thousand six hundred and eighteen indirect labor employees would be required at a payroll of \$11,236,000, or a total payroll of \$48,687,629.

The above quantity of apparel items is the equivalent of a \$285,586,984 a year wholesale volume; 18,726 direct labor employees and 5,618 indirect labor employees, or a total of 24,344 employees; and, on the basis of an average of 2 dependents per employee, accounts for a total of 73,032 people's livelihood being affected, for a period of 50 weeks.

The importation of the above quantity of the various apparel items listed represents the production of 97 plants in the United States, with an average of 250 employees per plant.

The above figures include direct and indirect manufacturing labor, salesmen, shipping, warehousing, etc.

The Late Russell V. Mack

SPEECH

OF

HON. CHARLES A. BUCKLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. BUCKLEY. Mr. Speaker, the sudden and untimely death of our distinguished colleague RUSSELL MACK, of the State of Washington, has shocked and saddened me. Thus it is with a profound feeling of sorrow that I utter these few words in praise of a fine Congressman and an outstanding citizen.

RUSSELL MACK and I were associated as members of the Committee on Public Works since he first entered the Congress in 1947. Over the years I grew to know him and to learn by daily contact with

him in committee work and on the House floor his ability as a legislator, but more important, his fine qualities as a person and a man.

He was one of the outstanding members of the Public Works Committee of which I now have the honor to be chairman. RUSSELL MACK had the keen mind of a trained newspaperman. He had a firm grasp of the many and varied problems that were presented to the committee, and his contribution to the legislation that was reported out of the committee was an invaluable one.

RUSSELL MACK was a warm human being with a faculty for adding to the enjoyment of the life of all those who had the privilege of coming in contact with him. He will be missed.

Thus it is with a deep sense of personal grief that I pay tribute today to my late colleague, for whom I held the highest respect, and express my heartfelt sympathy to his family in their great loss.

Slovak Independence Day

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. RODINO. Mr. Speaker, I have been asked to insert the following speech in commemoration of the 21st anniversary of Slovak independence, which was celebrated on March 14 and throughout this month. The speech was written by Joseph G. Prusa, president of the Slovak Newspapermen's Association of America:

THE TRUE MEANING AND SIGNIFICANCE OF SLOVAK INDEPENDENCE DAY—SLOVAKIA NEVER HAD A CHANCE—SHE PLEADS WITH AMERICA AND HER ALLIES FOR FREEDOM AND JUSTICE

(By Joseph G. Prusa)

While observing this 20th anniversary of the Slovak Republic, we as Americans of Slovak origin or descent owe it to our brethren in Slovakia to see to it that they get the freedom and justice to which they are entitled to.

Slovakia, unfortunately, never had a chance although its first attempt for full freedom and independence was formulated on American soil with the aid of our American Slovak organizations.

In order to fully understand the desire and aspirations of the Slovak people, let us review briefly their historical past.

The Slovak nation is not new among the civilized nations of the world, because history proves that it was a powerful entity during the Great Moravian Kingdom in the ninth century with its democratic form of government and diplomatic representatives in Rome, Constantinople, and other capitals of the world.

Slovaks, after settling in the United States and the Dominion of Canada some 4 score years ago, formed their own societies, parishes, organizations, newspapers, schools, etc., independently of Czechs.

Slovak educators like Jan Kollar and Pavel Safarik were noted Pan-Slavists, who were looked upon with admiration by all the leaders of other Slavonic nations, including the great Russia, where many Slovaks found

their home and achieved positions of great importance before World War I.

During World War I, when President Woodrow Wilson proclaimed freedom to all the oppressed nations, Slovakia was included among those nations on an equal basis with Bohemia, now known as Czechia. Robert Lansing, U.S. Secretary of State, in his announcement on September 3, 1918, recognized the two nations, Czechs and Slovaks.

Since it is an admitted fact even by President Thomas G. Massaryk, that it was Gen. Milan R. Stefánik, a noted scientist, who opened the door to him and Dr. Eduard Beneš to world diplomats for the recognition of their aspirations for the freedom of the Czech and Slovak nations; and since General Stefánik was a Slovak, no one can dispute the fact that all Allied leaders during World War I took it for granted that the aspirations of the Slovak nation for independence will be fully realized.

Unfortunately, guarantees for the full freedom of the Slovak nation as formulated in the Pittsburgh Pact were not fulfilled. On June 20, 1920, when the Treaty of Trianon was signed between Czechoslovakia and Hungary, Slovakia became a partner with Bohemia, Moravia and Silesia in a federated union, supposedly patterned according to our American democratic system which, however, never became a reality. Slovaks still had a chance to break away from the Czechs in 1920 and without Slovakia, there could not be a Czechoslovakia.

The 20 years of Czechoslovakia were the years of justified demands on the part of Slovaks for their full autonomy which, unfortunately, was not granted by the Prague government. Hitler took advantage of this weak link and used it as a weapon against Prague for its destruction.

The Pittsburgh Pact was ignored and Hitler's demands became dangerous to Czechoslovakia. After Lord Runciman's negotiations failed, the Czechoslovak Government on September 8, 1938, decided on a new and definite proposal for the settlement of the Sudeten problem and it granted far-reaching concessions in direction of autonomy.

Slovakia realized that it was surrounded by enemies, and was naturally looking for its salvation. And again when on September 21, 1938, British and French ministers at 2:15 a.m. demanded that President Beneš capitulate to German demands, the situation of Slovakia became even more dangerous.

These were the desperate days of struggle for survival. Our late President Franklin D. Roosevelt intervened and on September 26, 1938, sent a message to Berlin, Prague, London, Paris, Warsaw and Budapest, urging peaceful settlement. Instead of a peaceful reply, Hitler in his speech at Sportpalast denounced Czechoslovakia as a "lie", created by the "liar" Beneš.

On September 29-30, 1938 Hungary and Poland demanded certain portions of Slovakia. Mussolini and Count Ciano entered the picture. England and France informed Czechoslovakia that she can expect no assistance if she rejects the Munich decisions.

On September 30, 1938, Czechoslovakia accepted the Munich declarations and President Beneš resigned. A day later Germany's first soldiers crossed Czechoslovakia's frontiers.

On October 6, 1938, Monsignor Tiso was appointed minister for the administration of Slovakia in the Prague cabinet. A day later the Czecho-Slovak government accepted resolutions passed at Zilina for autonomy, or the granting of the Pittsburgh Pact signed in Pittsburgh, Pa., on May 30, 1918, with Monsignor Tiso as prime minister. (On October 18, 1938, Monsignor Tiso visited Munich.) Two days later the Communist party was suspended in Czechoslovakia.

This series of events continued step by step until November 19, 1938, when the Czecho-Slovak Parliament passed measures bestowing autonomy on Slovakia. Judge Emil Hacha was elected president of Czechoslovakia.

On March 9, 1939, the Czecho-Slovak Prime Minister Beran dismissed Monsignor Tiso, Slovakia's premier and all other ministers except two. Two days later new Slovakia's cabinet with Karol Sidor as premier was appointed. On March 13, 1939, Monsignor Tiso was requested to attend a conference in Berlin. Germany placed its demands and asserted that it will recognize Slovakia's independence.

Monsignor Tiso returned to Bratislava and placed the matter before the duly elected Parliament, which voted unanimously for Slovakia's independence and thus the Slovak Republic was born 20 years ago. It was recognized by 27 sovereign states, including Great Britain, France, Soviet Russia and the Vatican far before the outbreak of World War II.

When World War II broke out with Hitler's attack on Poland, we Americans began to give material aid to the stricken Allies.

After World War II, Beneš returned to Czechoslovakia. He had implicit trust in Soviet Russia and in a way, ran out on us Americans and our Allies after obtaining the necessary lend-lease and went to Stalin, to whom he swore loyalty.

In a statement to the Presidium of the Czecho-Slovak National Council, Prague, October 9, 1945, President Beneš stated:

"There are some individuals who asserted that we are in the hands of the Soviets, but the governments look upon us in a different way. We are the allies of the Soviet Union and we shall remain faithful to the Soviets. We are friends of the West and shall remain friends. In the form of our alliance with the Soviet Union we proceed and shall proceed in our own way * * *

On January 9, 1947, Jan Masaryk, Foreign Minister of Czechoslovakia, before the Chamber of Commerce of New York State in New York City laughed at the Iron Curtain stating: " * * * We hear a great deal about the Iron Curtain. I assure you there is no Iron Curtain."

Beneš and Jan Masaryk trusted the Reds, who took over Czechoslovakia in February of 1948. And before taking it over, on April 13, 1947, Msgr. Tiso, president of Independent Slovakia, went to the gallows in Bratislava just to please Stalin.

Msgr. Tiso never had a chance—and neither did Slovakia and the Slovaks.

During World War II I had the honor to receive numerous communications from many leading Americans. I treasure the one from Senator Arthur Capper, of Kansas, who wrote: "Every nationality, no matter how small, has an inherent right to its own nationhood. If that principle is not carried out after this war, then the conflict has been in vain."

And, sorry to say, that this principle has not been fulfilled so far as the Slovak nation is concerned.

It was the second time that the people of Slovakia were disappointed.

The first time, when World War I was waged for the freedom of the oppressed, according to the principles of President Wilson's 14 points. Justice for Slovakia was not meted out and such eminent Americans like the late Col. Stephen Bonsal, personal interpreter to President Wilson during his administration and at the Peace Conference, author of the "Unfinished Business," Pulitzer prize winner and "Suitors and Suppliants," stated this after World War II:

"Today, the lovers of truth and justice are promised another chance through the United Nations. The failure to do justice to the Slovaks at the Peace Conference, after World War I, was the piece of unfinished

business, which I most regretted: I hope to see it redressed."

Colonel Bonsal is the father of the present U.S. Ambassador to turbulent Cuba, Hon. Phillip W. Bonsal.

Now that Slovakia is in the clutches of Soviet Russia, which is exploiting its natural resources by creating there an atomic arsenal as a potential enemy of the Western democracies, we plead the case of its enslaved people before the free world. We do so especially for the reason that there is a relative in almost every American Slovak home who lives in Slovakia. The oppressed people of Slovakia are seeking our moral and material aid and especially freedom and justice.

This, therefore, is the true meaning and significance of the observance of the 20th anniversary of the Slovak Republic, whose creation came about on March 14, 1939, when, unfortunately, the great nations left Slovakia to the mercy of Hitler.

Under such desperate conditions, when Poland on one side demanded a slice of Slovakia's territory, and Hungary's army on the other side, even before Monsignor Tiso was summoned to Berlin, already waited on the border of Slovakia to march in and take over the other large portion, which it later did, especially such important historic cities like Košice and Komárno, Slovakia acted like a good mother to save its homeland from being partitioned among its enemies.

Under such incomprehensible circumstances, Slovakia proclaimed its independence on March 14, 1939, by the duly elected Parliament, whose validity was ratified in Prague on November 19, 1938.

From March 14, 1939, and on, Slovakia, which accepted Christianity in 863 A.D., or 50 years before the Czechs; 150 years before the Poles; and 200 years before the Hungarians, had its first Christian church in Nitra consecrated in 833 A.D., was recognized as a government both de jure and de facto by Great Britain, France, Soviet Russia, Vatican, and 23 other countries.

Slovakia, with its almost 4 million inhabitants, is larger than Albania, Costa Rica, Dominican Republic, Estonia, Honduras, Ireland, Iceland, Israel, Luxembourg, Norway, Panama, Salvador, Transjordan, and New Zealand. She has nearly as many inhabitants as Bolivia, Denmark, Finland, Guatemala, Iraq, Venezuela, Yemen, and Switzerland.

Slovakia's area of 49,000 kilometers makes it larger than Albania, Belgium, Estonia, Haiti, Luxembourg, Netherlands, Switzerland, Salvador, and Israel.

On the basis of these facts and human justice, inspired by the declaration of President Woodrow Wilson, who said in 1918 when the freedom for Slovakia was being guaranteed that "The Declaration of Independence is a practical document for the use of practical men. It is not a thesis for philosophers, but a whip for the tyrants; it is not a theory of government, but a program of action."

Fortified by this statement we feel that we should take action and thereby declare that one of the world's greatest masterpieces, the United States Declaration of Independence, inspired the freedom loving Slovaks to declare and to establish independent Slovakia, for we believe with Abraham Lincoln that "no man is good enough to govern another man without that other's consent."

And the people of Slovakia never gave their consent to Soviet Russia or the Communist Prague to govern them. They demand, as it was already presented to the U.S. Congress by the Honorable MELVIN PRICE, that Slovakia be granted a right to a free election under the supervision of the United Nations.

I conclude with the statement by that great American, the late U.S. Senator Robert A. Taft, whose father, the illustrious Presi-

dent William H. Taft signed a bill to give Slovaks and other ethnic groups in the United States in 1910 census an opportunity to register their mother tongue and thus the forgotten ethnic groups were recognized.

Senator Taft stated emphatically: "I agree entirely with your position and believe that the Slovaks should be permitted to set up an independent nation."

In this spirit and in all fairness and justice, in accordance with our American democratic traditions, we are observing the 20th anniversary of the Declaration of the Slovak Republic, pleading with the freedom loving people of America and the free world to give Slovakia its deserved chance—its precious freedom and independence.

Threat of Transfer of Postal Installations and Custodial Employees to General Services Administration

EXTENSION OF REMARKS OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1960

Mr. FINO. Mr. Speaker, the president of the National Association of Post Office Custodial Employees, Mr. Alfred De Matteo, has addressed an appeal to Members of Congress regarding the pending threat of transfer of postal installations and custodial employees to General Services Administration.

Because of the urgency of the matter, I am including in the Appendix of this RECORD, Mr. De Matteo's appeal letter:

NATIONAL ASSOCIATION
POST OFFICE CUSTODIAL EMPLOYEES,
March 22, 1960.

Hon. PAUL A. FINO,
Congressman
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN: The National Association of Post Office Custodial Employees, its officers and its membership are again faced with the threat of additional transfer of postal installation, and its custodial employees, to General Services Administration.

Due to reorganization plan 18, of 1950, which then effected the transfer of approximately 218 post office buildings to General Services Administration. Now, 10 years later, it again threatens to swallow up an additional 250 post office buildings.

In 1950, under the effected transfer, many of our post office custodial employees were either downgraded or forced to retire—where and when, will it end.

We feel that our Government will not sanction undue hardship to its faithful career employees especially our custodial employees who are in majority veterans of World Wars I, II and Korean war, and many with more than 20 years of faithful postal service, to be denied at the stage of the game—full retirement benefits; loss of seniority rights; loss of take home pay (due to General Services Administration wage hour board scale of pay); and possible job abolishment with the ever prominent issue of possible contracting of janitorial; elevator; and guard force to private contractors.

It could end right now, if the Congress would enact legislation to stay fast, all post office custodial employees, and postal buildings, and permit the Post Office Department to maintain its own buildings exclusively.

Sincerely,

AL DEMATTEO.

White House Conference on Children and Youth

EXTENSION OF REMARKS OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1960

Mr. DAGUE. Mr. Speaker, the White House Conference on Children and Youth, presently in convention here in the Capital City, is in my opinion something of a misnomer, if I read the newspaper accounts correctly. In the first instance reference to the White House has only served to arouse Messrs. Meaney and Carey of the CIO and their ilk to launch a series of diatribes at the administration and by indirection to accuse the occupant of the White House of gross dereliction in his duty. In the second instance, the presumably basic concern for children and youth is almost lost in the raucous clamor for such things as expanded public housing, urban renewal, Federal aid to education, to name a few, which are related to juvenile welfare only in the abstract.

The bleeding heart volunteers and the hard-boiled professionals who sit up nights trying to drum up new apologies for wayward juveniles are met here to talk interminably all around the subject and with a careful avoidance of truly corrective measures which can only be effectively applied in the home and by the youngster's parental mentors.

This business of thinking up excuses for delinquent youth was met head on yesterday by the Reverend Daniel Eagan, a Catholic priest from New York. Father Eagan lead off with the observation that teenagers are being encouraged to say, "It's not my fault" and then made the further comment that, "The young people are excusing themselves because we are excusing them too easily."

A representative of the National Probation and Parole Association challenged Father Eagan with this specious argument:

Few of these kids decided where they were to be born, where they would be brought up, what churches they would be brought up in.

To this Reverend Eagan replied:

You are suggesting that a 16-year-old boy who knifes someone is not responsible because he has a drunken father. This philosophy of excuse is * * * encouraging youth to say, "It's not my fault."

And then Father Eagan went on to comment:

I favor every type of treatment, but boys and girls have free will to do right and wrong. They are responsible for their actions.

This leads me to observe—as a former sheriff who has had some acquaintance with delinquent juveniles—that our primary concern should be directed toward delinquent parents and that there is no substitute for parental failure to set the proper example and take corrective measures. And in that observation I am referring only to those homes which are neither broken by divorce nor menaced by adult dereliction, but from which come so many young people who end up

on the wrong side of the law. And as corollary to that observation I think it is high time that we abandon this silly business of refusing to identify by name and family these teenagers who are detected in crime, thereby condoning the crime and encouraging its reputation.

Logic and Liberals

EXTENSION OF REMARKS OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1960

Mr. RHODES of Arizona. Mr. Speaker, some people consider themselves liberal intellectuals, but they give their support in public affairs to programs which have an emotional appeal rather than logical justification. They identify themselves with popular pressure groups rather than to think independently as intellectuals presumably would. They display the same kind of intolerance and arrogance as the most illiberal members of our society in holding rigidly to theories and judgments of a generation or more ago.

Recently an editorial appeared in the Mesa Tribune, Mesa, Ariz., on this subject which I think deserves careful consideration, and I am bringing it to the attention of the House:

LOGIC AND LIBERALS

Not all liberals are intellectual, nor are all intellectuals properly defined as liberals. Yet generally the most articulate and aggressive liberals place themselves—and are placed by others—in this category.

It is something of a curiosity, therefore, that when looking about for public figures to embrace and to champion, they are not content to give their allegiance to those who qualify as intellectuals pure and simply. They want something else.

The quality they seek they usually call "heart." If they do not believe a man's mind is balanced by a warm heart, they are thoroughly distrustful. Anyone they consider to be coldly analytical they almost automatically assume to be coolly calculating and self-serving.

No sensible human being can possibly quarrel with this insistence upon genuine warmth of spirit. Man at his best obviously is both a feeling and a thinking machine.

Nevertheless, many liberal intellectuals seem unwilling to search much below the surface for evidence of this balance. They want the heart worn on the sleeve if they are to give their support.

The political or other public figure they are most likely to espouse is the one who can shout their causes in emotion-charged tones, who will loudly declare war on the illiberal enemy and promise his defeat momentarily. To this they will respond with cheers.

In the cold light of the reason which they believe they possess more than most men, these liberal intellectuals may understand that their causes will not ordinarily be won so decisively—if at all. They may also appreciate that the issues which cut so deep with them may not in fact be so clearly defined as they, at fever emotional pitch, like to believe.

Yet if a public figure, an intellectual, stands before them and calmly and detachedly lays out these real prospects, they are not won. His rationality may in truth be balanced by well-governed emotional con-

cern. But if they do not see it quickly, if they do not hear this in a supercharged voice which exhorts and declaims, they distrust him.

Looking on from a distance, one would imagine this was the very kind of well-balanced, well-governed individual they would most cherish as at once eminently practical and still encouragingly idealistic.

That they do not is a paradox that may in some part explain why the influence of liberal intellectuals is less in this Nation than they think it ought to be.

Nixon To Build on Record

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. MICHEL. Mr. Speaker, Monday night Vice President Nixon delivered a challenge to the Democrats in a forceful speech at the Lincoln, Nebr., Founders Day celebration. To those of us who from the very beginning were convinced that Dick Nixon would be our best bet for 1960, his remarks were simply a reaffirmation of what we expect from him. In addition to promising a positive and aggressive campaign in every State, he made a special point that he would not be content to stand pat on the enviable record of the Eisenhower administration but that "a record is something to build on, not to stand on."

Gould Lincoln in his "Political Mill" column appearing in the Evening Star on Tuesday, March 29, discusses the Vice President's speech, and I should like to include it at this point:

[From the Evening Star, Mar. 29, 1960]

THE POLITICAL MILL

(By Gould Lincoln)

NIXON'S CHALLENGE TO DEMOCRATS

Democrats who have been suggesting Vice President Nixon will wage a pussyfooting campaign for the Presidency, trying to play both sides of the street, should know Mr. Nixon better. They have had opportunity to see him in action time and again. Just because he is sticking to his job in Washington—the job of helping to get the best possible legislation out of the Democratic Congress—and Republicans in Congress—and because he has not flung himself into campaigns in the presidential primary States, is no reason for these Democrats to believe they will not have a real fight on their hands if Mr. Nixon becomes the Republican presidential candidate, as now appears virtually certain.

In one of his rare trips out of Washington these days the Vice President told a Lincoln, Nebr., Founders' Day celebration last night exactly what he proposed to do should he be the GOP nominee. He also gave notice to the Democrats what they may expect. He has rejected completely the advice of public relations experts who believe that television has made person-to-person campaigning relatively obsolete and ineffective. By plane, by train, and by bus, the Vice President will carry his campaign into every State, city, and town he finds time to visit. Judging by his past campaigning performances, he will hit many of them. Further, he has again made it clear his will be no standpat attitude in the coming campaign. He proposes

to wage a campaign looking to the future of the American people. Declaring that the Republican Party will be proud of the record of the Eisenhower administration, Mr. Nixon continued: "A record is something to build on, not to stand on. Standpat, hold-the-line thinking is not enough to meet the great challenges confronting the American people at home and abroad."

Calls farm policy stymied

This is no attempt to draw away or disassociate himself from the Eisenhower administration's record over more than 7 years, in which Mr. Nixon has played an unusually important role for a Vice President. Nor is it so interpreted by President Eisenhower. For the President, despite his Democratic critics, is no standpatter, nor does he expect Mr. Nixon to be one. Speaking as he did to an audience in one of the great mid-west farm States, the Vice President frankly said he was not satisfied with the existing farm programs. The farm problem, he added, has been stymied in recent years because a Democratic-controlled Congress has been unwilling to go along with a Republican President who was seeking a solution in the interest of the farmers. And here Mr. Nixon laid down a real challenge to the present Democratic Congress—just as the President has done. He pointed out that the President has taken an unprecedented action, sending to Congress a message saying that he will approve any bill the Congress will pass if it meets certain basic standards he lays down.

"It is time," Mr. Nixon said, "for the Democratic leadership in Congress to fish or cut bait. If they fail to act, or act irresponsibly during this session of Congress, they will have made it clear they prefer a farm issue to a farm solution. And it is high time they quit treating the farmer as an issue and recognize him as a person who is not getting his fair share of America's prosperity." Mr. Nixon then made it clear he would present a farm program of his own to the voters—if Congress fails to act, and to act responsibly, and that he would expect his Democratic opponent to come forward with a plan, too, so that the electorate could decide between the two.

Sees economy big issue

Another issue—the economic development of the United States—the Vice President has insisted will be a major one in the coming campaign. And closely wrapped in with this issue, he contends, will be the ability of this country to meet Communist economic competition. Democrats, in Mr. Nixon's view, have engaged in a lot of loose talk—similar to Russian Soviet talk—to the effect that American economy is fat, complacent, stagnant, and on the downgrade. This despite the fact that our economy produces more jobs for more people at higher wages than any other country in history. He pointed out that this country is ahead of the Soviet Union in every major product, and that our total production is more than double theirs; that we have achieved in a great measure the economic objective of abundance under our system that the Communist theory merely promises.

To emphasize the difference with the Democrats who are seeking their party's nomination to oppose him, Mr. Nixon promised he would not fall for "phony schemes for Government promotion of economic growth." The American people, when they go to the polls next November, he insisted, will have an opportunity to choose between "two basically different economic philosophies." He meant, of course, the Republican and the Democratic.

The pressure is on for Republicans to close ranks—and back Mr. Nixon for President. It is also on to convince many independents and Democrats the country will fare better with Mr. Nixon in the White House than

with any of the Democratic aspirants for the Presidency. In this connection, it is well to consider the most recent comments by former Governor Dewey, of New York, who has declared himself a staunch supporter of Mr. Nixon for President—and Governor Rockefeller for Vice President. Such a GOP national ticket, Mr. Dewey said, would be tremendous.

Negro Minister Attacks "Sitdowns"

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a thought-provoking statement by a Negro minister of Montgomery, Ala., in which he deplores the methods adopted by his own race in the current "sit-downs" controversy. This letter was published in a recent issue of the Jackson (Miss.) Clarion Ledger, and I think it is worthy of public notice:

SITDOWNS, ETC.—NEGRO MINISTER ATTACKS METHODS

MONTGOMERY, ALA.—Negroes were given some hard-hitting advice by a Negro minister in a letter to the editor of the Montgomery Advertiser.

A clipping of the letter was sent to Editor T. M. Hederman, Jr., of the Clarion-Ledger. Pertinent portions of the letter are reproduced below:

"As a Negro minister who is in discord with the recent action of the leaders of the Montgomery Negroes who advocated the meeting on the capitol steps for mock prayer, I would like for you to please print this on your editorial page.

"For some time now I have been observing the racial problem in our State, Nation, and Southland. I have watched the thinking and strategy of our leaders, and I have the highest admiration for some of them, but then the stupidity of some others is most disgraceful.

"Now, I know that it is the God-given right of every human being to be free; I know that with our form of Government, it is the right of every citizen to vote, pay taxes, and uphold the Constitution. In striving for our constitutional rights, I believe that we have overloaded individual rights. There is a vast difference between a person or individual's willingness to accept and being forced to do so. No person should be forced to mix or to live together if they do not want to.

I know that in order to get freedom and full citizenship some pressure must be applied, but I can't see where marching, singing, and fake praying on the capitol ground will bring any of this about. Have we as men (white or black) lost our abilities to reason with each other, live together, and defend America from its outside enemies."

MOCKERY OF PRAYER

"I believe we as Negroes are overlooking or disregarding the basic facts of our troubles, and in many cases, we are misusing the Bible to mislead our people. For example, praying in the streets to be seen on TV and heard on the radio is far from Christian like, and proves little if anything. It is to me making a mockery of prayer and most undignified. Read over what Jesus says about

street praying in Matthew 6: 1-18. There are no ifs, ands, buts, and maybes the meeting of Montgomery Negroes to pray on the capitol yard was a disgrace before God, a shame on the Negro race, and mockery to the cloth all over the earth.

"Seeing as how the Bible is the yardstick, let us take one or two verses of it and see if we can justify some of our action as being Christian and in keeping with the teaching of Christ. Let me again call your attention to the book (Luke 6: 41-42). Herein is the crux of the whole matter.

"The Negro has been mistreated, yes, and for a long time. But he has a beam in his eye, and the white man has a mote in his. But we as Negroes are so busy getting the mote out of the white man's eye that we have overlooked the beam in our own. Let us now face the beams or facts first, and if I am living, we will take up the motes at a later date."

LACK OF RACIAL PRIDE

"First of all there is race pride. We do not have very much race pride. As soon as we get a clean shirt and 20 cents, we rush across the race line to Canada and marry a blonde, get in the Jewish faith, and say, 'I am not a Negro anymore.' Or we go to a nightclub and when some see us for the pig that we are, we start throwing things. We were born black, and we shall die the same way.

"Secondly, there is cleanliness. The truth is as a race we are not clean. We will not clean up our homes, our yards, our churches, our children, or ourselves. We still hold that the best use for water is drinking. If we do not have the best of clothes, we can at least wash the ones we do have. For God's sake keep clean.

"Our third beam is religion. We have been playing church for about 50 years, make believe Christians. We live between 30 and 70 years and we spend all this time in run-down churches, with part-time ministers, strutting, singing, and hollering, 'Going to heaven when I die, get our wings, eat milk and honey, sit down and tell God all about it.' When are we going to teach our people how to live here on earth; how to make ends meet; how to save; build homes; take care of our children; budget our money; clean up our homes, and most of all go back to God?"

AND MORALS

"Our fourth beam is morals. Will somebody please tell me where they are? We beat, knock, kill, cut, and shoot our wives, children, and husbands. We spend our first money after pay day on liquor and gambling, thus leaving the baby home crying for milk. We owe every loan shark in the land; we do not know where our children are at night, nor they us. We send them to school unclean, without food, and sometimes without anything to get food with. Yet, we call them bad.

"Our women are by no means saints, and sometimes they can carry themselves in a most unreligious, unfeminine way, drunk, disorderly, and using profanity in the presence of children, not carrying their children to church, not cleaning up their homes, not preparing meals, rags on their heads, mud on their feet, and snuff in their mouths."

LAZINESS

"Our fifth beam is laziness. Many of us who could vote are too lazy to register or pay taxes. We veterans, men who are tax exempted, are often nonvoters, thus we are noncitizens after having fought for it. When we get jobs instead of doing our best work, we are slothful, doing just enough to get by. I know our schools need much in the way of improvement, but we are doing a poor job with what we do have.

"My grandmother could spell 10 times better than I can, and she only went to the

fifth grade. Why? Our Negro teachers are doing two things, watching the clock and the calendar for payday."

USING GOD

"Our sixth beam is talking. In general we, as a group, talk too much. Someone once said, 'Little minds discuss people, great minds discuss ideas.' We spend too much time talking about simple things and other people. We talk down our race and its businesses; we run and tell everything that is said in our meetings.

"You can talk about sit-in and sit-out all you want to, but a vote-in and vote-out, within the next 5 years, would do the job. You are not going to change the racial problem overnight anyway. The hearts and minds of men will have to change first. If you want to talk, then talk up some more votes."

THE WAY IS CLEAR

"I have named six of the many beams that stand between the Negro and full citizenship. There are others, but if we are ever to become first-class citizens, we must do first things first.

"Now, the only way to really lick every excuse for race discrimination is to:

"Have pride in our own black race.
"Vote up, clean up, keep up, live up, look up—do your work jam up."

Rev. W. T. HUDSON.

Engineer Predicts Potomac Drought

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. ULLMAN. Mr. Speaker, I would like to call your attention to a recent news story regarding the address of General Lipscomb of the Corps of Engineers to the annual meeting of the Potomac River Development Association. General Lipscomb called attention to the increasingly serious situation in this area with regard to water supply, pollution abatement, and other aspects of water resource management.

The article follows:

[From the Washington Post, Mar. 23, 1960]

ENGINEER PREDICTS POTOMAC DROUGHT

(By Jerry Landauer)

A top Army engineer called yesterday for prompt action to head off the possibility that parts of the Potomac River near Washington will be dry by 1975.

Under "average circumstances," it will take 10 to 15 years to plan, finance, and build the system of reservoirs that probably will be recommended by the Corps of Engineers, said Brig. Gen. Thomas H. Lipscomb.

By that time, he said the ever-increasing demands of households and industry will strain a supply depleted by diversion of water in the upper river basin.

Lipscomb, the corps' North Atlantic Division engineer, spoke of the race to develop water storage capacity costing hundreds of millions of dollars in a talk at the first annual meeting of the Potomac River Development Association.

He said the water supply situation is serious even now and will get progressively worse for the entire Potomac Basin.

"By 1975, we note that the demand for water supply alone is equal to the dependable flow and the river would be dry below

the intakes (below Little Falls Dam)," he said.

"Even today, should a 1930 drought re-occur, there would not be sufficient flow to satisfy both the water supply needs and the desired flow for pollution abatement," he said.

Lipscomb said the political and financial problems involved in building a reservoir system are so staggering that easy and early decisions are not probable.

"The history of similar projects does not give promise of completion in less than 10 or 15 years," he said adding that the Potomac project will require prompt and effective cooperation of State, local and Federal agencies.

In other developments:

A House Appropriations Subcommittee released a transcript of hearings in which the administrator of the Soil Conservation Service told how spreading "urbanization" of the Washington area adds to silt pollution.

The administrator, D. A. Williams, said a "very high percentage" of all sediment flowing into the river comes from topsoil that has been ripped up by bulldozers and denuded of cover.

The Potomac Electric Power Co. received authorization from the Maryland Water Pollution Control Commission to discharge hot water into the Potomac from its generating plant near Dickerson, Md.

FBI Helps Restore Stolen Valuables

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent I include the following article from the Sunday Star for March 20:

TIPS TO FBI TURNS UP \$772,533 IN PLUNDER

When a confidential informant gives the FBI information about a local crime, what happens to the tip?

During 1959, data furnished to the FBI by confidential informants and passed on by the FBI to other law enforcement agencies resulted in arrests of 2,294 persons and the recovering of stolen or contraband valuables totaling \$772,533.

This was revealed yesterday in a survey of FBI services to other law enforcement agencies.

Tips from confidential informants have ranged from gambling operations to storehouses of obscene literature.

PRINCE GEORGES CASES

Cited was the tip to the FBI resulting in the arrest of 122 persons in Prince Georges County, Md., last August on a variety of charges including operating a disorderly house, gambling, illegal sale and consumption of alcoholic beverages and disorderly conduct.

Other mass arrests, stemming from informers' tips relayed by the FBI to other law enforcement agencies, included the November arrest of 115 persons in Manatee and Sarasota counties, Fla., on gambling and liquor violation charges with the recovery of \$17,000 in contraband; the December arrest of seven persons in New York on charges of possessing obscene material with intent to sell it and vagrancy and the recovery of obscene literature valued at \$25,000 and the 1959 arrest of 34 persons in Mobile, Ala., on bootleg whisky and gambling charges.

The survey showed the range of FBI services to other law enforcement agencies in training, locating wanted men, providing scientific aids to crime detection, identifying disaster victims reporting crime and mobilizing law enforcement efforts against certain types of crime.

HIGHLIGHTS NOTED

These were highlights of the survey:

The FBI laboratory's work, available free to all American law enforcement agencies, rose about 80 percent in the past decade to an alltime peak of 184,993 scientific examinations in the 1959 fiscal year.

Among many reference files available to local officers is the national fraudulent check file. This file, rated as the national clearinghouse for fraudulent checks, at year's end contained nearly 90,000 specimens of bad checks.

The FBI's Identification Division, central repository for fingerprint identifying data, closed the decade of the 1950's with 154,363, 719 fingerprint cards on file. When a local law enforcement agency requests it, the FBI will place a stop notice in its fingerprint files on a wanted man. By this method, 16,967 fugitives were identified for local law enforcement agencies in 1959.

AIR CRASH WORK

The FBI's disaster squad of fingerprint experts, during 1959, was called on to identify victims after airplane crashes in New York, Pennsylvania, Maryland, Texas, Virginia, and the Gulf of Mexico. In two cases, the crash near Charlottesville, Va., on October 30, and the Gulf of Mexico crash on November 16, the squad successfully identified 100 percent of the available victims.

An alltime high of 1,149 fugitives were located by FBI agents during fiscal 1959 under the Fugitive Felon Act, which authorizes the FBI to go after criminals who have fled across State lines to avoid prosecution for the most serious crimes.

During the 1950's, the FBI assisted in 27,418 police training schools in the United States. During the decade, regional law enforcement conferences sponsored by the FBI throughout the country spotlighted attacks on such crime problems as auto thefts, thefts of transit goods, interstate trafficking in stolen property, bombing and bomb threats, bank robbery, fleeing felons, organized crime and racketeering.

Federal Pay Increases

EXTENSION OF REMARKS

OF

HON. ROBERT E. COOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. COOK. Mr. Speaker, I have presented the following statement to the Post Office and Civil Service Committee in support of legislation which would provide a pay raise for postal workers and other Federal employees:

STATEMENT OF CONGRESSMAN ROBERT E. COOK, BEFORE THE HOUSE COMMITTEE ON POST OFFICE AND CIVIL SERVICE IN BEHALF OF POSTAL PAY INCREASE LEGISLATION

Mr. Chairman, I am in favor of the enactment of legislation in the present session of Congress to provide a pay raise for our postal and other Federal employees. Such a raise is long overdue. It would raise the wages of these employees to the level of wages in private industry.

The correspondence from my district reveals instance after instance of financial hardship for these local representatives of

our Federal Government. The average letter carrier's salary of \$4,640 is hardly enough to meet the present-day high costs of food, clothing, shelter, and medical expenses.

If we expect these trained workers to remain in Federal service, this Congress must face up to their financial problems and vote them a needed pay increase.

I have introduced H.R. 11231 calling for these needed increases. It is similar to the so-called Morrison bill, and I hope its principles will receive the favorable consideration of your committee.

Civil Rights

SPEECH

OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8801) to enforce constitutional rights, and for other purposes.

Mr. BROYHILL. Mr. Chairman, I rise to add my voice in opposition to the proposed civil rights bill—the so-called Celler-McCulloch bill—because I believe it is loaded with danger to the very fundamentals upon which our Government is based. My fears are not simply a reflection of the so-called southern viewpoint, nor do I see the threats to be just against southern institutions. Rather, I see in this bill a weakening of some of the very foundations of our Constitution—foundations that we all have been sworn to protect.

I cannot in a few moments go into the full details of the objectionable features of the bill, though I will touch briefly on one of its provisions that particularly concerns me. First, however, I would like to say to those who are pushing it through that, even if what they were trying to accomplish were for the general good, this is the wrong way to go about it. For, in my judgment, the bill is out of joint with its purpose. It will not amplify the civil rights that now prevail nor will it insure their enforcement. It will on the contrary retard and obstruct and embitter. The bill is out of true relation to the climate of opinion that prevails in the United States, making it seem as if we were in the midst of some kind of internecine war between our Negro and our white populations. It will be no more successful in accomplishing the intended purpose than the prohibition amendment was during the 1920's. As did that attempt to legislate social customs, it may make the problem worse than it is at this time.

For the problem is being solved—slowly, it is true, but no major social change can take place too rapidly without revolution, and I am sure no one wants that. Anyone who reflects can see the tremendous strides made by our Negro population during the past few decades—and that progress is continuing at an accelerated pace. One needs only to observe the increasing number of well-dressed and well-housed members of the Negro race in any city, in-

cluding those in the South. One only needs to note the rising literacy rates, the increase in the number of professional people, and the increasing influence of colored voters.

There are Negroes—and I am glad of it—who are Members of this very House. There is a Negro who is the president of the Borough of Manhattan. One of the foremost members of the United Nations staff is an American Negro. They hold, as they should, positions of esteem in the South as their talents permit. Of course in certain quarters there are some hardships, even humiliations. But then I suppose I would not be welcome in a meeting of Democrats even if I sought an invitation, and I can imagine meetings of that political persuasion where I would be grabbed by the seat of the pants and the scruff of the neck and booted out of the place. In some parts of our country this religious grouping is not kindly disposed to that religious grouping.

There may even be errors of decency and taste and fairness that we all deplore. But can it be possible that at this late date—anno Domini 1960—the problem, instead of diminishing, as I certainly believe it has, has grown to such gargantuan proportions as to call for this overwhelming hullabaloo of legislative agitation and excitement?

Instead of fostering steady development, this bill would shake the very foundations of our Constitution in an attempt to hurry the process. It would usurp important rights of the States in the control of elections, and not merely the rights of the Southern States. Of equally grave concern, this bill would constitute an important breakthrough in the field of Federal control of education.

Hidden behind the smokescreen of civil rights, the original bill would grant the Federal Government authority to seize local educational institutions and administer them. Although restricted by amendment, some of this authority remains. Most interesting is the basis for determining which schools can be taken. Only those can be taken which have been built with partial Federal contribution under the federally impacted aid legislation. Yet, proponents of Federal aid, in every debate or speech on the subject, always point to a clause included in the bills insuring that the Federal Government will in no way interfere with local educational systems.

I say let us stop this thing, recognizing as we must that the ill-conceived law enforcement techniques in this bill reach out into the future. They inflict injustice instead of preventing it and they bring with them pain and offense that after two World Wars and Korea we had done so much to blur and appease. We in the south along with our friends in the north will find paths for the adjudication and the amelioration of wrongs that do exist and permit time and maturity to wipe them out. The process may be slow but it is sure and it is enduring. This crude enforcement method is a way of turning back the clock of history and returning to the use of force and vengeance where reason and tolerance had been proved so successful.

Physicians and Citizenship

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. CURTIS of Missouri. Mr. Speaker, several months ago my esteemed friend and colleague, JOHN P. SAYLOR, of the 22d District of Pennsylvania, arranged for me to attend a meeting in Johnstown, Pa. The meeting was sponsored by the Cambria County Medical Society and as the principal speaker that evening I discussed with the distinguished membership of that organization the issues involved in the question of federally sponsored health care. It was also my privilege to inform that group of the outstanding contributions their able and respected Congressman, JOHN P. SAYLOR, was making to the considerations of responsible government and free enterprise.

I found the doctors of this medical society extremely interested in national affairs. I also found them with renewed awareness of the urgent need to be solidly back of their Congressman.

During the course of that meeting I met many of the doctors present on a personal basis including the society's then president, Dr. Joseph C. Hatch. Several months later there came to my attention a February 1960 copy of that society's monthly publication "The Medical Comment." I noticed the remarks of Dr. Hatch as he brought his term of office to a close in January 1960.

I believe Dr. Hatch's observations bear the consideration of every American citizen and for that reason I will include his remarks at this point in the RECORD:

Honored guests and distinguished colleagues, tonight is my valediction as the president of the Cambria County Medical Society. I leave an office that I have held with great pride and I hope with some usefulness.

In the past year our county society has had many accomplishments resulting not from my stewardship, but from the effective work done by individuals and by the society's committees under the guidance of dedicated committee chairmen. In this connection I would specifically mention—

Dr. D. George Bloom for his commendable work with the State board of licensure.

Dr. Paul McCloskey for his work on the State economic committee.

Dr. Victor Bantly and his economic committee for their work on the fee schedule.

Dr. Reginald Davis, Dr. John B. Lovette, and Dr. George Hudson whose activities in the house of delegates were extremely valuable.

The members of the Cambria County Academy of General Practice whose leaders for the year 1960 are President Dr. Yale S. Lewine, Vice President Dr. Raymond L. Dandrea, Secretary Dr. Charles F. Reeder, and Treasurer Dr. George Hay.

Our devoted and untiring board of directors which kept the ship of state at an even keel through the year and finally,

Our executive secretary, Mr. Robert Lynch, whose endless capacity for work has enhanced the reputation and efficiency of this society. Without his tireless efforts and

those of Dr. John Cwik we would still not have our Blue Cross-Blue Shield plan.

That I do not enumerate other outstanding work is not an indication of disregard or unawareness on my part of the significance of that work. It is instead in consideration of your time and in deference to events that are to follow on this evening's program. I would, however, express my heartfelt appreciation to my fellow officers of this past year who did so much to keep me from more frequent mistakes; I would also thank the society's membership for its support. Without that help and support, nothing would have been possible.

In my remarks this evening I propose to comment briefly on an important but often neglected aspect of a physician's daily life—citizenship. In terms of public service the activities of our profession are exceeded by no other; in terms of service to country in behalf of good government, our contribution falls considerably short. Except in time of war, our service to country is too often confined to paying our taxes and to infrequent trips to the voting booth. In the past three decades as a consequence of this neglect of citizenship we have found our taxes rising and our influence at the polls declining.

I have mentioned the trend of three decades, a period comprising less than a single generation. That is all the time required to bring our profession, and more importantly—our Nation to a position of critical juncture with respect to historical ideals and concepts of human liberty, economic opportunity, and individual incentive. It is in this 30-year period that freedom has been weakened by the inroads of bureaucratic governmental paternalism.

Why do I, a doctor of medicine, presume to talk to you about such things? As recently as 12 months ago I would not have done so. My interests at that time were entirely confined to the practice of my profession and keeping abreast of the rapid changes in medical scientific lore. A year ago an event occurred to distract me from my preoccupation. I assumed the office of president of your society.

This event imposed upon me responsibilities that directed my attention to new vistas of physician interest—vistas that in a scientific sense may have no direct relationship to medicine but which have a very marked potential impact on medical practice and health progress. This impelled exposure to socioeconomic affairs made me acutely aware of the price of our citizen neglect. It is to the end of impressing upon you the need for a renaissance in citizenship on the part of the American physician that I direct the balance of my remarks.

In our professional preoccupation with medical ills we have overlooked our Nation's No. 1 malady—"Federalitis." This is a disease that manifests an insatiable craving for revenues—that is exceeded in intensity only by an intemperate desire to spend. There is an involvement of bureaucratic hypnosis that produces the hallucination that the mere existence of a problem demands solution by the National Government. The disease causes a schizophrenic type of Americanism that flourishes on class prejudice and seeks to glorify mediocrity by rewarding the idle with the productivity of the industrious.

Federalitis has existed in the United States for 30 years and we have done little or nothing about it. We have thought too much of the rights of citizenship and too little of the duties of citizenship. As the 18th century statesman and political scientist Edmund Burke put it, "The only thing the forces of evil need for victory, is for enough good men to do nothing." Because we have been content in the last 30 years to do nothing, Federalitis has flourished.

I do not mean to suggest that the blame is exclusively attributable to the medical

profession. In our neglect of citizenship we have been joined ingloriously by other citizen groups. However we must recognize that physicians occupy a position of prestige and influence in their respective communities. This position gives unique opportunity to contribute to the formulation of sound public opinion on the important issues confronting our people.

Let us now turn to a brief examination of some of the consequences of citizen neglect in the past 30 years and then consider the problems presently confronting our profession to see how we can use our citizen status to help solve them.

The abandonment of citizen responsibility to Government bureaucracy in the past three decades has not been without its cost. In the last 30 years—

Our Federal Government has operated in the red in 24 years or 80 percent of the time;

Our Federal spending and tax collections have increased more than 25-fold;

Our Federal public debt has increased \$270 billion;

Our daily lives have been encroached upon and made less free by Government bureaucracy;

Our Nation's security has been made less secure by tragic ineptness in the conduct of our foreign affairs;

Our State and local governments have joined with the Federal Government in vain fiscal folly to spend us rich, smart, and secure.

This enumeration of bauble and blunder is not the cry of an alarmist. The facts are all too real; the dangers are all too present. Because of the limits of allowable time let me take only one of the things I enumerated for further analysis.

The national debt increased \$270 billion in the last 30 years. So what difference does it make? It makes this much difference. The United States has 20 percent more debt and 43 percent less income than all the other nations of the world. It means higher taxes and consequently fewer jobs because our free enterprise society is that much less able to compete on favorable terms with the economic endeavors of the nationals of other countries. Our existing national debt requires annual carrying charges of \$9 billion. This item constitutes the largest single non-defense-related expenditure in our Federal budget. That \$9 billion amount is more than the combined Federal, State, and local taxes paid by all the businesses and individuals in Pennsylvania. We have now reached the point where we cannot wait until it is convenient to pay our own way. It is urgent that we achieve budgetary surpluses so that a sustained program of debt reduction can be accomplished.

This onerous public indebtedness has been created despite the imposition of unprecedented tax burdens on our free enterprise society. In regard to taxes, we have reached the point where Federal, State, and local tax collections take one-third of our net national product. Thus we have gone one-third of the route toward the total socialization of the economic endeavors of our citizens.

Historians tell us that no great nation has ever been conquered from without until it has first destroyed itself from within. I submit to you there is no middle ground in dealing with the grave issue of our Nation's fiscal affairs. Sound fiscal principles are not divisible.

As was true in the case of fiscal matters, so it is true with regard to so-called social progress, that voter apathy has had its cost. The accomplishments of the past 30 years have been accompanied by a curtailment of economic opportunity and by the sacrifice of individual liberty to Government bureauc-

racy. Too often social legislation has been for the benefit of an organized vocal minority at the expense of a majority of our people. Too often we have acted in too great haste, forgetting that generally a social program is not reversible or correctable even though experience demonstrates a major part of that program to be a mistake. Too often we have overlooked the fact that the Government can only give to the people that which it has first taken away from them.

Under the guise of social progress the labor boss has exploited citizen indifference through acts of power-seeking endeavor so that he now has the authority to deny the right to work to our people and the ability to weaken the economic fabric of our country. This position of special privilege was not thrust upon the labor boss but was seized by him through diligence and vigilance while the rest of us basked in apathy and enjoyed the solitude of indifference.

The cost of citizen neglect has even manifested itself in the life and death area of international affairs. Our national leaders once made the political judgment that the American people were interested in the easy way out with the consequence that International communism in the thirties and forties accomplished landgrab after landgrab. In recent years our foreign policy has tended to be productive of intended results. Progress has been slow and arduous but encouragingly, progress has been achieved. Summarizing the cost of 30 years of citizen neglect we find that on the fiscal-economic front we have had mounting taxes that have been exceeded by rising spending and growing public indebtedness with its destructive inflationary impact; on the social front we find the labor predator achieving a totalitarian preeminence that is limited neither by law nor by patriotism; we find that on the international front communism has become the greatest threat to the freedom and welfare of mankind since the Middle Ages.

Turning our attention from the past three decades to future events we find many important issues that must be resolved in the challenging period ahead. The manner in which these issues will be disposed of may depend in important measure on the extent to which our time is devoted to them. It is obvious that neglect produces mistakes, and our Nation and its people cannot endure three more decades continuing the errors and socialistic trends of the past 30 years.

Governmental matters that are of interest to physicians that will receive consideration in the months ahead include the level of Government spending that is to be authorized, the Simpson-Keogh bill to alleviate the present tax discrimination against the self-employed by allowing them to provide for retirement on a tax-deferred basis, the coverage of physicians under social security, the Forand bill which would tax billions from the present working population to pay medical and hospital care costs of only some of the presently retired, the pending Senate inquiry with its political overtones into pricing practices with respect to the life saving drugs, and the question of whether or not Federal funds shall be available to the States for educational purposes.

Study is also likely to be given to the closed-panel type of medical practice that is subject to the coercive, nonprofessional regulation of third parties. Such a panel arrangement is in derogation of the principle of freedom of choice with respect to the selection of a physician by any American citizen.

Each of these is a matter on which much more time than is available to me tonight could be spent. We have discussed them in the past; many of them have been subjects on which we have had speakers this past

year. These are all matters that are of genuine concern to every medical practitioner because they affect our profession; they affect the quality of medical service we are able to render to our people; they affect the health of the Nation.

So what do we do to assure that the professional medical point of view is taken into account in disposing of these important considerations?

First, I propose that as individual members of our county society we work in diligent support of our State and National organizations by informing ourselves with the facts and then by informing others as to what the facts are. If the American people know the truth, they will not fall prey to the demagog.

Second, I propose that as a part of our citizenship we work individually in behalf of the principles of government in which we believe and in behalf of candidates who stand for those principles. I do not intend to make a partisan plea, but I will make a specific observation. Our Congressman, JOHN SARLOZ, who is with us tonight, stands closer to our principles than any of his past opponents, but how many of us have endeavored to help him expose the demagogues and social planners who have opposed his candidacy. We have been free with our criticism and too frugal with our help. I would remind you that it is easier to elect someone to office who believes as you do than it is to change someone to your point of view once he has been elected.

Third, I propose that our county society carefully consider the establishment of a government affairs committee. It would be the duty of this committee to advise the society with respect to governmental matters that are of interest to the membership. It would also be a function of this committee to outline a program whereby the medical practitioner could become a more influential voice in behalf of sound American government. I know of no other professional organization that has a committee of this type. If we could successfully develop such a committee, it could serve as a prototype of similar activity elsewhere.

In closing—

Let me thank you for the honor you have given me this past year as your president.

Let me warn you that crucial days are in store for our Nation, for our fellow citizens, and for our profession.

Let me admonish you that we cannot afford an attitude of accommodation toward the forces of evil that threaten our American way of life.

Finally, in closing, let me remind you of the words of the Italian poet, Dante, who more than 700 years ago said, "The hottest places in Hell are reserved for those who, in a period of moral crises, maintain their neutrality."

Roll Call Conducts Poll on Presidency

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. ANFUSO. Mr. Speaker, today's issue of Roll Call, the newspaper of Capitol Hill, has on its front page my article entitled "Congress Seen As Best Judge of Candidates' Qualifications." In this article I discuss the qualifica-

tions we look for in a candidate who seeks the Presidency and I then propose a poll of all those on Capitol Hill, including Senators, Representatives, and Hill employees, to cast their ballot since they are best able to judge the candidates and their qualifications on the basis of firsthand knowledge and association with them.

Mr. Sidney Yudain, the very capable editor and publisher of Roll Call, has taken up my proposal for such a poll to determine the ideal presidential candidate among the present group seeking the nomination in both parties. I wish to call this poll to the attention of all Members and their staffs, as well as committee staffs.

On its last page, Roll Call publishes ballots marked for Senators, Representatives, and Hill employees. The poll will be secret, only the total vote will be disclosed. No one need sign the ballot. Merely fill in the name of the candidate who, in your opinion, possesses the necessary qualifications for President, then check the ballot which applies to you—Senator, Representative, or congressional aid—and mail it to Roll Call, 433 New Jersey Avenue SE., Washington, D.C.

Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD my article as published in Roll Call and also a news story from the same issue of March 30 announcing the congressional poll:

CONGRESS SEEN AS BEST JUDGE OF CANDIDATES' QUALIFICATIONS

(By Representative VICTOR ANFUSO)

At the moment the question uppermost in many minds—and probably next in importance to the question as to who will succeed Mr. Eisenhower in the White House next January—is this: What qualifications should a candidate for the Presidency possess? Or to put it in another way, What kind of a President do we want?

Our history can point to strong men in the White House and to weak men; to men who rose above partisan considerations, and those who pursued a strong partisan course during their incumbency; to men who were eloquent speakers and able administrators; and men who did not cherish being too much in the public eye and preferred to leave matters of administration in the hands of trusted assistants; to men who were forward looking and progressive in their approach to dealing with the Nation's problems, and men who were satisfied not to "rock the boat" and merely drift along.

What kind of qualifications in a President does the Nation seek in 1960?

Life magazine recently conducted a poll on the qualifications for the Presidency and came up with the following list:

1. He must be a man of conviction who is willing to fight for his principles, but at the same time he must be able by conciliation and compromise to avoid fights.
2. He must be a man who is above partisan considerations.
3. He must be a man with a common touch.
4. He must be a vigorous and decisive man who can make up his mind, one who can get things done, and who will not be pushed around by other people, especially by the Russians.
5. He must be a man with wide experience of foreign affairs.

This is a good list to begin with. Surely, there are other qualifications which are no

doubt equally important. In his book "The Splendid Misery," Jack Bell writes that "fundamentally the people want a President with the integrity of Washington, the guts of Jackson, the unwavering purpose of Lincoln, the energy of Theodore Roosevelt, and the flexibility of Franklin Roosevelt."

We could perhaps add a few other qualifications in determining a person's fitness for the highest office in the land, for example, his capability as a leader of men, his mature judgment of public affairs, his assumption of duties and the fulfillment of responsibilities entrusted to him. He must be able to forge unity of the Nation, rather than division of forces. He must believe in progress and continued growth in every phase of our national life, for to believe otherwise would mean stagnation, loss of our moral, political and economic positions in the world, and our retrogression to a second-rate power.

At the same time, the American people is mature enough by this time to avoid such dubious qualifications as the place of a potential candidate's birth or his religious convictions. His creed or his birth above or below a certain imaginary border should not be factors in determining qualifications, for these are sectional and divisive factors.

The candidates for the Presidency in both major political parties this year appear to be endowed with many of the qualifications listed above. With the exception of possibly one or two, the public is not yet fully acquainted with all of the candidates to be able to judge which one of them possesses the best qualifications. Under those circumstances it would be almost an impossible task to pinpoint the results of such a poll or to establish the image of the one candidate who above all others possesses the necessary qualifications to succeed Mr. Eisenhower in the White House.

The people who, at the present state of affairs, would seem best to know the qualifications of the various candidates are those who are working on Capitol Hill. Senators, Congressmen, and employees of the legislative branch of the Government know the men seeking the Presidency, they know their qualifications. They observe them at close range, their approach to people, their tactics, their viewpoints. They know what political campaigning represents since they live and breathe politics every day in the year.

If so happens that practically all candidates aspiring for the Presidency in 1960 are from Capitol Hill as Members of the Senate, or in Mr. Nixon's case as presiding officer of the Senate. One of the leading darkhorse candidates is a Member of the House.

It would seem then that the most logical, because it could prove to be the most accurate, poll of the candidates possessing the best qualifications for the Presidency would be right here on Capitol Hill. A poll of this type should be conducted in an objective manner, the individual preferences or opinions should not be disclosed, and the emphasis should be strictly on qualifications. The results of such a poll would be most interesting and arouse considerable attention throughout the country.

CONGRESSIONAL POLL ON PRESIDENCY BEGINS

Representative VICTOR ANFUSO's article on page 1 today has prompted Roll Call to undertake a vast poll of the Congress to determine the ideal presidential candidate.

Senators, Representatives, aides, secretaries, and committee staff members will be eligible to vote for the man who in their opinion embraces the five qualities listed on page 1 as most desirable in a President.

Ballots appear today on page 12. No names are required on the ballot, but voters are asked to enter no more than one ballot each.

Ballots are categorized into three divisions: Senators, Representatives, and staff members. Voters are asked to use the ballot which represents their status.

Votes should be cast only for nationally acclaimed candidates including: Vice President Nixon, Senator LYNDON JOHNSON, Senator JOHN KENNEDY, Senator HUBERT HUMPHREY, Senator STUART SYMINGTON. Although Adlai Stevenson and Nelson Rockefeller have flatly declared they are not candidates their names will be acceptable.

Voting is restricted to Congressmen and staff members.

Ballots should be sent to Roll Call Poll, 433 New Jersey Avenue SE.

Since all of the major potential candidates emanate from the Congress, the Roll Call poll takes on added importance, since the vote will reflect the opinions of voters personally acquainted with the gentlemen and who have seen them in action over a long period of years.

It is hoped that the votes will be based on the five qualifications which, according to the Life magazine poll, the ideal President would possess.

More About Interest Rates

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Joseph R. Slevin as it appeared in the New York Herald Tribune of March 24, 1960:

U.S. ECONOMIC FRONT—DROP IN RATES QUIETS FEARS FED COULDN'T FIGHT A DTP

(By Joseph R. Slevin)

WASHINGTON, March 23.—A sharp drop in interest rates has quieted fears that the Federal Reserve System won't be able to fight the next recession by making money easier.

A number of worriers had been warning that an antirecession shift to easy money would immediately spark a large and damaging outflow of gold from the United States, but recent developments indicate that it won't happen that way.

Interest rates are the key to the problem. A move toward easy money would bring about lower rates and the doubters figured that investors would respond to a drop in U.S. yields by transferring their funds to European countries that offer a bigger return.

The events of the last 10 weeks have tested the theories of the doubters and they have been found wanting.

Interest rates have been skidding here just as they would in a recession even though the Federal Reserve System has not adopted an easy money policy and even though business activity does not seem to be turning down.

EUROPE RATES VARY

Rates in European money centers have been firm in some instances and rising in others just the way they would be if the worst fears of the doubters were realized and the United States entered a recession while European business activity continued to expand.

But gold has not been pouring out of the United States and into European vaults. While there has been some outflow since the

beginning of the year, it has been modest and no larger than the payments that the United States normally would be expected to make to help finance its continuing balance of payments deficit with the rest of the world.

One reason for the unexpectedly small size of the gold outflow seems to be that the doubters greatly overestimated the amount of money that flows from one country to the other in search of high interest rates. The best guess of financial officials here is that there probably is no more than \$500 million of hot money invested in the United States at any time.

Another important factor has been the willingness of foreign central banks to hold short-term U.S. Government securities as investments.

GERMAN EXAMPLE

Consider the case of a West German private investor who sells U.S. Treasury bills and reinvests his money in Frankfurt because he can get a higher return. He obtains the deutsche marks from the Bundesbank in exchange for the dollars he received when he sold the bills. There is a drain on the U.S. gold reserves only if the Bundesbank then demands gold for its recently acquired dollars.

But the Bundesbank and other European central banks apparently have been using their dollars to buy Treasury bills. The private investor's sale of bills and the central bank's purchase thus cancel one another and there is no outflow of gold from the United States.

Instead of weakening the U.S. bill market at a time of falling rates, the foreign central banks actually have been strengthening it.

They not only have been reinvesting the dollars they receive from their nationals who sell bills, but they have been using a large part of their earnings from balance-of-payments transactions with the United States to buy bills.

What all of this means is that the central bankers have confidence in the value of the dollar.

Results of Questionnaire

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. CHAMBERLAIN. Mr. Speaker, I have just received the tabulated results of my latest questionnaire which was mailed recently to every home in the Sixth Congressional District of Michigan. The heavy response to this questionnaire far exceeded my expectations and the results, tabulated by IBM, clearly indicate that very careful thought and consideration went into the answers.

To me, the results of this questionnaire emphasize the deep concern many people have on matters of national importance.

The percentage tabulations of the answers on the questionnaire I have just conducted are included below. I trust the results will prove as interesting and informative to all who study them as they are to me.

Questionnaire results

(In percent)

White and Colored Races Working Together for Negro Advancement

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks I include the following editorial from the Jackson (Miss.) Clarion-Ledger of March 19, 1960.

I am grateful to Mr. W. W. Bryant of Crystal Springs, Miss., for calling this editorial to my attention and I commend it to my colleagues. It follows:

WHITE AND COLORED RACES WORKING TOGETHER FOR NEGRO ADVANCEMENT

Despite the hysteria and hullabaloo about civil rights, the truth is that colored citizens of Mississippi and the South are enjoying more progress and happiness here than in the other sections of America where intolerable racial tensions exist. Our thoughtful Negro leadership generally realizes this.

J. W. Jones, colored publisher of a newspaper at New Albany, Miss., has pointed out some facts deserving nationwide attention. In an editorial recently featured in his paper, he said:

"Why should we be disturbed by the outside propaganda when we are in a better fix than the Negroes are in the States which are producing the propaganda? If equal school buildings are what the NAACP keep up so much racket about here in Mississippi, they should send a man over our State to see what we Negroes have and also see what is in the process for Negro children.

"We are more satisfied and less disturbed with segregation in Mississippi than the Negroes in States where there are integrated schools. When we lie down to sleep at night we are not uneasy that our house will be destroyed by dynamite before the sun rises.

"We are not only at ease but we are progressing under a segregated system. Statistics show that 27,746 Negroes own farms, holding titles to 1,772,414 acres of land valued at \$95 million. We have in Mississippi 7,217 Negro teachers drawing a total salary from State funds of almost \$19 million, in addition to what we get on a local level.

In addition there are 12,061 professional and technical workers. This includes everything from accountants to dental technicians. Other Negro job classifications include craftsmen, foremen, and kindred workers. Any Negro who is reliable can get anything he needs in Mississippi."

The New Albany colored editor goes on to say that the story of Negro progress in Mississippi has never been sufficiently told and that the enemies of the South are trying to take advantage of unthoughtful members of his race. Editor Jones truthfully declares that there is less conflict between white and colored people in the South than in other sections.

Mississippi still offers the greatest opportunities for colored advancement, within the framework of established customs. We believe in providing the best possible schools, housing, employment, and living standards for Negroes because it is clearly realized that if our colored citizenry lacks adequate purchasing power, we cannot have a prosperous economy.

Hon. Russell Mack

SPEECH

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. CURTIS of Missouri. Mr. Speaker, I join with the other Members of this House in their shock and sorrow at the death of the late Representative RUSSELL MACK. His sincere hard work in nearly 13 years in which he represented the people of southwestern Washington earned him a place of deserved respect in this Chamber.

It is significant, in the light of his dedicated service to the country in this body, that he should die while in the performance of this service. RUSSELL MACK was a fine man and an able Member of Congress. It was as recent as 3 weeks ago that I had occasion to make excerpts from one of his speeches delivered on the floor of the House in order to explain a matter of some complexity to the people of my district. His guidance and coun-

sel will be missed by those of us who had learned we might rely on his ability, his efforts, and his integrity.

The Soviet Proposal for a Nuclear Test Ban

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. STRATTON. Mr. Speaker, I am sure that all of us are deeply concerned with the proposal recently made by the Soviet Union for a ban on the testing of nuclear weapons. I am sure we realize the heavy burden of responsibility placed on President Eisenhower in making a decision on this matter. I am sure all of us also recognize the desire of the American people for world peace and for an elimination of the threat of nuclear warfare. Certainly we do not want to do anything that would jeopardize the achievement of this splendid goal.

On the other hand, I am sure that all of us recognize too that if we were to enter into an agreement which did not accomplish what it professed to accomplish, and in which one side could violate the agreement with impunity, then we might well jeopardize the security of our great country and indeed contribute to the outbreak of the kind of warfare we most earnestly want to prevent.

In this connection, Mr. Speaker, two articles appeared in this morning's New York Times which I believe merit the attention of my colleagues as well as the Nation as a whole in reflecting on this difficult subject. One of them is by the distinguished military editor of the New York Times, Mr. Hanson W. Baldwin. The other is by the chief of the Washington bureau of the New York Times, Mr. James Reston. Under leave to extend my remarks, I include both of these thoughtful articles:

TEST BAN'S DRAWBACKS—SOME U.S. AIDS FEAR WEST'S DEFENSES MAY SUFFER AND RESOLUTION BE SAPPED

(By Hanson W. Baldwin)

The agreement yesterday between President Eisenhower and Prime Minister Macmillan seems to pave the way for a formal accord between the Soviet Union and the West on halting nuclear testing.

The two Western leaders agreed to accept the recent Soviet proposal on banning small underground nuclear tests as soon as the Russians have signed a treaty banning weapons testing that includes provisions for on-site inspections.

Tests in the atmosphere and under the seas would be prohibited by treaty, with an agreed policing system. Underground and high-altitude tests would not be resumed by mutual agreement for a limited period, but there would be no control or enforcement mechanism to detect violations.

The new Washington policy will undoubtedly be greeted as good news by world public opinion and by most governments.

But many responsible officials in the U.S. Government—particularly in the Atomic Energy Commission and in the Defense Department—view the decision with pessimism and alarm for several reasons.

FURTHER TESTING FAVORED

They believe the United States has not developed so-called small, or tactical, or "clean" nuclear weapons of adequate variety or in sufficient quantity. They believe missile warheads could be materially reduced in size and bulk with further testing.

They feel it essential to carry out further nuclear explosions for peaceful purposes—in the high altitudes for scientific knowledge and military byproducts, underground for harbor or canal excavation or other reasons.

These officials believe that the United States will honor the moratorium, whereas there is concern that the Soviet Union may violate it secretly. They fear the ultimate effects of such a ban upon the U.S. present position of nuclear superiority—one of the country's greatest advantages in military strength in relation to the Soviet Union.

In sum, therefore, the objectors, feel that the United States has been maneuvered by propaganda, worried world public opinion and skillful Soviet diplomacy into a position that many commit the country to an indefinite test cessation but without the means of detecting some types of violations.

The background of this point of view is little known to the American public.

Some time ago the Secretaries of State and Defense, the chairman of the Atomic Energy Commission, the head of the Central Intelligence Agency and the President's scientific adviser, acting as "the principals" of a committee to guide policy for the Geneva conference on halting nuclear tests, unanimously recommended to the President that there not be a complete cessation of experimental explosions.

COMMITTEE FINDINGS NOTED

Their advice was based on the findings of a scientific committee that studied the chances of detecting concealed underground blasts. In some cases—depending upon the size and location of a blast and other variables—the chance of detecting a secret underground explosion by any detecting system within present technical competence was reckoned as 1 in 100,000.

Subsequently, though no new technical facts have been produced to indicate a higher probability of detection, some of the key members of the advisory committee reversed their previous recommendation.

It was this reversal that led to President Eisenhower's agreement with Mr. Macmillan.

Most observers, however, are less worried about the possibilities of undetectable violations of the projected test ban and the

technical slowdown it may cause in nuclear arms development than they are about the psychological and political consequences of such an agreement.

WESTERN LETDOWN FEARED

An agreement to halt nuclear testing, signed with a flourish at the summit conference, could lead to the same sort of psychological relaxation in the West as occurred after the summit conference in Geneva in 1955. Western military defenses might suffer. It might be difficult to maintain the strength and unity of the West if another era of seeming "sweetness and light" were initiated by the agreement.

Fear that such a ban might establish a precedent for uninspected and uncontrolled arms limitation agreements also, is expressed. Officials observe that any inspection and control system of 100 percent efficiency is impossible. Delegates at the disarmament and test-ban conferences in Geneva have been talking only about "deterrent" inspection and control systems, which might provide only a small chance of actually detecting violations.

One of the basic issues in any arms limitation discussions is how much of an inspection and control deterrent is necessary. A major danger of a voluntary and unpoliced test ban is that it might encourage the further weakening of a deterrent inspection system in other and more important fields than that of nuclear test cessation.

WASHINGTON: THERE'S LESS HERE THAN MEETS THE EYE

(By James Reston)

WASHINGTON, March 29.—When George Catlett Marshall was Secretary of State, he used to say to his associates, "Don't ask me to agree in principle: that just means that we haven't agreed yet."

This about sums up the Eisenhower-Macmillan talks on suspending nuclear test explosions. They agreed in principle with each other and with the Soviet formula for ending the tests, which means that they haven't really agreed at all.

What the two leaders did today at Camp David was to buy time, and they can use it, for they are still far apart in their estimates of the diplomatic and scientific aspects of the problem.

First, in the diplomatic field, Macmillan gave our officials the impression that he was much more willing than Eisenhower to take risks to reach an agreement with Khrushchev.

Second, in the scientific field, there is still no agreement—indeed there is the widest disagreement—among both United States and British scientists on what constitutes "adequate inspection" of any test ban.

OPTIMISTS AND SKEPTICS

Macmillan's assumption was that Khrushchev really wanted an arms suspension treaty and that he would agree to a system of adequate inspection and control to get it.

President Eisenhower is reported to have been much more skeptical. His attitude was that he would believe it when he saw it, but only after the Russians had come to grips with the hard details of allowing 20 to 30 on-site inspections, observation flights over the Soviet Union, the composition and rights of the control commission, and the explosion of nuclear weapons under ground to test the detection devices.

It was not that the President and Prime Minister disagreed on objectives, but merely that the President put the emphasis on the means of reaching an agreement, and Macmillan put it on the objective.

The problem of getting together, even within the United States, on the definition of "adequate inspection" is equally complicated.

For example, Hans Bethe, former director of the Los Alamos Scientific Laboratory, and

now a professor of physics at Cornell, argued in a letter to the New York Times today that the Soviet test suspension offer "is a major step forward," which provides a suitable basis for a treaty "provided the details can be satisfactorily clear up."

But Freeman J. Dyson, a physics professor at the Institute for Advanced Study at Princeton, contends in the current issue of Foreign Affairs that only after a great deal more experimentation will it be possible to reach a rational conclusion about modern weapons and the capacity to conceal or detect underground nuclear explosions.

Professor Dyson argues, for example, that the possibility of detonating a hydrogen bomb without the use of a nuclear bomb trigger has changed the whole problem.

THE DETECTION PROBLEM

"My personal opinion," he writes, "is that nuclear explosions in the kiloton range could be concealed very completely. That is to say, I believe it will be feasible to build a building, looking externally like a normal industrial structure, within which kiloton explosions can be contained."

"The cost of such a facility may not be exorbitant, and the earth tremors which it produces may be no larger than those produced by normal industrial operations. . . . Concealment of this sort could be detected only if the international control authority were empowered to travel everywhere and open all doors."

Thus, what is "adequate inspection" to Professor Bethe is not adequate to Professor Dyson, and what are "details" to Professor Bethe and some of the British scientists are "fundamentals" to the President and Chairman McCone of the Atomic Energy Commission.

It will no doubt take considerable time to resolve these differences, and in this one important sense both the British and the Russians got what they wanted. For the fact is that there is a ban on testing now. It has been going on for 17 months, and Macmillan started a process here that will make it extremely difficult to begin testing again for many months.

This was the real agreement "in principle." The bomb tests are stopped and the diplomatic tests go on. But beyond this, there is less in the communiqué than meets the eye.

Utah Dairy Products Excel in Purity and Flavor

EXTENSION OF REMARKS OF

HON. DAVID S. KING

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. KING of Utah. Mr. Speaker, I am pleased to have an opportunity to express the pride and satisfaction which I, along with countless other Utahans, feel over the accomplishments of the Utah dairy industry.

We would all agree, I think, that the well-being of this Nation has been richly enhanced by the vast and wonderful stream of dairy foods which Americans enjoy. No other industry has made a greater contribution than have the dairymen to the well-being of our people.

Utah has made, and continues to make, a two-fold contribution in this field.

First, the grade A milk, the fine cheeses, and the other wholesome products which the Utah dairy industry pro-

duces are enjoyed not only by thousands of Utah families but by their neighbors in many States.

Second, the Utah dairy industry has achieved standards of purity, flavor, and quality by which it makes an important contribution to the general excellence and the steady improvement of the dairy foods which nourish this Nation.

In recent years the grade A milk supplied the Provo, Salt Lake, Ogden, and Logan markets has consistently placed upon the honor roll of the United States Public Health Service. Right now the grade A milk supplied Salt Lake, Ogden, and Logan is on this honor roll, and the milk in the Provo market is in the process of being rated.

In the tabulations which the Public Health Service makes on the milk which interstate shippers produce and distribute, Utah's pasteurized milk has ranked, and today, ranks with the finest in the Nation.

In 1957, all 48 fluid milk processing plants in Utah achieved an honor roll rating by standards of the U.S. Public Health Service. At the time of that rating, Guy P. Stevens, supervisor of dairying for the agricultural department of the State of Utah, observed: "So far as we have been able to determine, Utah is the first State in the Union to complete ratings for all its fluid milk plants and their supplying farms." A score of 90 or better is necessary to achieve honor roll status.

Items considered in the rating include: Quality of milk received from the farms, and milk quality after processing; type of processing; sanitation on farms and in plants; type and condition of equipment used; processing records; and the quality of administration and enforcement being applied in each area.

At that time Mr. Stevens said further: "Utahans can be very proud of their milk supply. Our State's milk ranks with the Nation's finest and is in heavy demand both in and out of the State. While tests are based primarily on safety and sanitation, the flavor quality of our milk is outstanding. We found milk plants across the State spotlessly clean. These ratings are not only a tribute to our fluid milk processing plants, but also to Utah's dairy farms."

During Utah's June Dairy Month commemoration in 1959, George S. Bulkley, of Los Angeles, chairman, national June Dairy Month committee, visited Utah. Mr. Bulkley at this time was chairman of the board of directors of the National Dairy Council.

This statement was made by Mr. Bulkley during his visit: "America's dairymen are now milking only 77 percent as many cows as they were in 1944 when the cow population reached its peak. Yet, the fewer cows are producing a total milk output 7 percent greater than in 1944. In Utah, your average cow yields 17 percent more milk than the national average."

According to figures released by Welby W. Young, president of the American Dairy Association of Utah, there are now approximately 8,000 dairy farm families in Utah, with a total of 100,000 milking cows. These cows last year produced approximately 750 million pounds of milk. Approximately 60 percent of Utah's milk production last year was from grade A farms. In 1959, 20 percent of Utah's milk output went into the manufacture of cheese, and the balance of the State's milk production was made into high-score butter, cottage cheese, evaporated milk or dry milk powder, and ice cream.

Utah's cheese has become a growing favorite from coast to coast, and for some years has been served at the famed Waldorf Astoria Hotel in New York City.

The State's evaporated milk is sent to broad markets in the Western States, and traditionally has been of superior quality.

Utah's ice cream and butter similarly have scored high in tests for flavor and texture.

While Utah's dairy products have won national acclaim, the State's dairy leaders have also been known for their progressiveness and for their major roles on the national dairy scene. Merrill N. Warnick of Pleasant Grove, Utah, served two terms as national president of the American Dairy Association, which represents approximately a million American dairy farmers.

In March 1959 Mr. Warnick was appointed by President Dwight D. Eisenhower to a 3-year term on the 18-man National Agricultural Advisory Commission.

Welby W. Young of Heber, Utah, currently president of the American Dairy Association of Utah, was recently named to the national board of directors of the National Dairy Council. He is also chairman of the important national research committee of the American Dairy Association.

Walter R. Holdaway of Provo is a member of the board of directors National Milk Producers Federation, and is also president of Federated Milk Producers Association, Utah's largest grade A dairy farmer association.

Utah's dairymen have been among the Nation's leaders in cooperative public relations and advertising. For approximately 10 years they have had an aggressive cooperative plan in Utah, in addition to giving full support to the national program of the American Dairy Association.

In conclusion, I would like to point out that the performance of the Utah dairy industry and its members reflects the best traditions of my State. The diligence, the perseverance, and the desire to excel which have been hallmarks of the Utah people since they carved their farms, homes, and industries from the mountain wilderness more than a century ago are demonstrated in the achievements and high standards of Utah's dairy industry.

Retired Officers and Selling

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. HÉBERT. Mr. Speaker, I offer this splendid news article by Jack Steele of the Scripps-Howard papers and an editorial which accompanied the story in the Washington News.

There is no necessity to comment on either piece, but I do take the occasion to say that I am quoted accurately and correctly by Mr. Steele and that I subscribe in the fullest to the editorial.

This is an issue the House will be given the opportunity of resolving next Wednesday when this bill is called to the floor for action.

Here is the article and editorial:

[From the Washington Daily News, Mar. 30, 1960]

HÉBERT WILL FIGHT HOUSE BILL ON MILITARY SELLING—WOULD ENCOURAGE INFLUENCE PEDDLING

(By Jack Steele)

Representative F. EDWARD HÉBERT, Democrat, Louisiana, charged today that a proposed House bill would legalize and encourage influence peddling by retired military officers.

The measure denounced by HÉBERT has approval of the Armed Services Committee, but faces a fight on the House floor next Monday.

Representative HÉBERT heads the Armed Services Investigations Subcommittee which last year inquired into the role of retired officers in the munitions lobby and drafted a tough bill to curb their selling to the military services.

But Chairman CARL VINSON, Democrat, Georgia, and other committee members—apparently as a result of objections from the Pentagon and retired officers—insisted on watering down the bill before sending it to the House.

AMENDMENTS

Representative HÉBERT announced today that he will offer amendments Monday to restore criminal provisions to the bill so as to bar officers from selling anything to the Defense Department within 2 years after they retire.

His amendments would provide penalties of up to \$10,000 in fines and a year in jail both for retired officers who violated this 2-year ban and for defense contractors who hired them.

Representative HÉBERT pointed out that the committee-approved bill provides only one penalty for officers who take selling jobs with defense contractors within 2 years after they retire—temporarily loss of their retirement pay.

He said this loss of retirement pay would become, in effect, the fee that a retired officer would pay for the privilege of selling to the Defense Department for 2 years.

PROFITABLE

And he noted that many officers would find it profitable to give up a few thousand dollars of retirement pay temporarily to take \$25,000 to \$50,000 a year jobs with defense contractors.

"The committee-approved bill simply would not prohibit retired officers from selling their influence to these contractors," he said. "Instead, it would legalize, encourage, and promote such influence peddling."

"A high ranking officer, within 24 hours after he retired, could be right back in the Pentagon using his influence on behalf of a contractor. As long as he was willing to give up his retirement pay, the committee bill would not touch him."

Representative HÉBERT also noted that laws already on the books provide the same pay-loss penalties for retired Army and Air Force officers as the committee bill, and require the Navy to deprive its officers of retirement pay if they sell to the Navy anytime after they retire.

EX-OFFICERS AND INFLUENCE

When a House subcommittee headed by Representative F. EDWARD HÉBERT, was investigating the "munitions lobby" last year, it turned up the names of 1,453 retired military officers who had taken jobs with the 100 biggest contractors doing business with the Pentagon.

On the other side of the Capitol, Senator DOUGLAS of Illinois revealed similar findings.

This year, as a result, Representative HÉBERT sponsored a bill to bar all military

officers from selling anything to the Pentagon within 2 years of their retirement. He put some teeth in the bill.

The Armed Services Committee, headed by Representative CARL VINSON, extracted the teeth and reported a bill Representative HEBERT says would curb none of these practices, but actually would "legalize and encourage" influence peddling by retired officers.

Representative HEBERT will try to get the fangs put back in his bill when it goes before the House next week. He will be up against a potent lobby. The Pentagon in general has opposed the bill, and the retired officers—although they also are drawing retirement pay from the taxpayers' till—naturally are against it. We hope the House agrees with Representative HEBERT.

Even the Vinson committee, in its report, concedes that influence can be "prejudicial to the free and unfettered decisions of the Government," although the bill it recommends does nothing to prevent it.

The Defense Department is planning to spend nearly 25 billion taxpayer dollars on procurement next year. If the zeal of contractors hungry for huge slices of this cake influences the decisions which lead to this vast spending, rather than the strict merits of the projects, the taxpayers are bound to take a licking. And the defense program to suffer in proportion.

House Members voting next week on the influence bill shouldn't be permitted to forget this.

Funds for Jefferson National Expansion Memorial

EXTENSION OF REMARKS

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mrs. SULLIVAN. Mr. Speaker, under unanimous consent, I am submitting for inclusion in the Appendix of the CONGRESSIONAL RECORD one of the best statements I have ever read on the importance and significance of the Jefferson National Expansion Memorial being constructed jointly by the Federal Government and the city of St. Louis on our great riverfront park along the Mississippi River in the Third Congressional District of Missouri.

The statement I am referring to is an editorial which appeared Sunday in the St. Louis Post-Dispatch entitled "Gateway of the West."

It is most encouraging to know that the Senate in passing the Department of Interior appropriation bill for the coming fiscal year has agreed to provide the funds needed to maintain an effective rate of progress in construction of the memorial. Thanks to the efforts of our two Missouri Senators, the bill contains \$4,663,125. This is a substantial increase over the amount provided in the President's budget. It is an amount, however, which can be spent efficiently and which must be available for disbursement in the coming fiscal year if we are to have any chance at all of completing this project by the target date set by the Secretary of Interior and the Director of the National Park Service, as well as by the mayor of St. Louis, that is, by 1964 when the city observes the

200th anniversary of its beginning. I am very hopeful that the conferees from the House of Representatives on the appropriations bill will agree to the amount provided by the Senate.

I am sure if they read the following editorial from the St. Louis Post-Dispatch they will see and recognize why this money is so important:

[From the St. Louis Post-Dispatch, Mar. 27, 1960]

GATEWAY OF THE WEST

"We're going West tomorrow, where the promises can't fail.

O'er the hills in legions, boys, and crowd the dusty trail."

—Stephen Vincent Benet.

"Napoleon Bonaparte, like Milton's Satan on his throne, sat unapproachable in his bad eminence." So Henry Adams begins his characterization of the enemy who "had to be faced and overawed by the gentle optimism of President Jefferson." Talleyrand, "who never forgave himself for having once believed in a popular revolution," had persuaded Napoleon to "pacify Europe and turn the energies of France toward the creation of an empire in the New World and was the more sure of success because, in the reactionary spirit of the time, he commanded the sympathies of all Europe in checking the power of republicanism in its last refuge."

It seemed that "10,000 French soldiers, trained in the school of Hoche and Moreau, and commanded by a future marshal of France, might have occupied New Orleans and St. Louis before Jefferson could have collected a brigade of militia in Nashville." The Federalists blindly cried for a war against France—a war which probably would have reestablished French power along the whole length of the Mississippi, which might have brought about the secession of the territory between the Appalachians and the river, and which would have entrenched British and Spanish power on the young nation's flanks.

Americans, too, rarely recall how their country was almost confined to the Original Thirteen States—divided by slavery—on a continent under European control. The prudence, the vision, and the daring of Jefferson overcame this dark threat. Through the Louisiana Purchase he made possible the expansion of the United States from ocean to ocean as a world power. This work must stand in the first rank of American accomplishments. Surely the people, especially western people, will insist that it be commemorated by the national monument which has been started on the St. Louis riverfront.

The riverfront national park—to be dominated by a 619-foot stainless steel arch symbolic of the Gateway of the West—was suggested by a committee of St. Louis citizens appointed December 15, 1933, by Mayor Bernard F. Dickmann and headed by the late Luther Ely Smith. Franklin D. Roosevelt responded with enthusiasm. On June 15, 1934, he signed a congressional joint resolution establishing the U.S. Territorial Expansion Memorial Commission to formulate plans for the monument. St. Louis was proud to join in financing it on the basis of \$1 for each \$3 of Federal money. On September 10, 1935, the voters approved a \$7,500,000 bond issue. And on December 21, 1935, the President made available \$6,750,000, matched by \$2,250,000 in city funds, for the acquisition of the 41-block site.

From the beginning this was a national project. Three Senators and three Members of the House of Representatives had to be among the nine members of the Memorial Commission. Title to the site was given to the Government. The development was put in charge of the National Park Service. St. Louis made its bargain with Washington because, after all, it was on the St. Louis river-

front that Capt. Amos Stoddard took over the Louisiana Territory from the French. Here was the starting point of Lewis and Clark, Pike, Ashley, Fremont and the "mountain men" who blazed trails to Oregon, to Santa Fe, and to California. And it was the jumping-off point for the settlers who went west in their mover wagons.

Enthusiasm was high a quarter of a century ago. The preliminary work was pushed along rapidly. By May 1942, all buildings had been cleared from the site and from the city's tax books. The beautiful old courthouse—in which Dred Scott started his suit for freedom—was added to the site by the city. The war, however, forced a halt until 1945 when St. Louis citizens raised \$225,000 for an architectural competition for the design of the memorial. The winner was the conception of Eero Saarinen which Aline B. Loucheim praised in the New York Times as "a noble, symbolic monument, fitting, beautiful, and impressive."

The arch and the other elements in the Saarinen design were approved by the Federal authorities on May 25, 1948. But the war's delay, the use of the area as a vast parking lot, and the reluctance of the railroads to relocate their riverfront tracks gave objectors in Congress and elsewhere their opportunity. President Truman did dedicate the site on June 10, 1950, but it was not until May 17, 1954, that Congress authorized construction. And it was not until 1956 that it voted \$2,640,000 for preliminary work. But slowly enthusiasm was rekindled, and the National Park Service set 1964, the bicentenary of St. Louis, as its target for completion of the arch.

With this assurance that the Government would keep its part of the bargain, public and private interests in St. Louis committed themselves to the enhancement of the areas adjacent to the national memorial. Almost 50 additional blocks are to be cleared. New approaches have been built. A new bridge across the Mississippi, a stadium and accommodations for visitors to the memorial have been given the green light. In all, St. Louis will expend far more in the neighborhood than it will cost the Government to finish the memorial. Yet now Washington again threatens to allow the work to come to a money-wasting halt. The administration's budget includes only \$1,650,000 for the project. A minimum of \$4,603,125—to be supplemented by \$1,534,375 in city funds—is needed to keep the work on schedule.

The St. Louis delegation in Congress is making a fight for this appropriation. This is not a grab for "pork." It is a request that the Government honor its pledge. And St. Louis, we trust, will have the support especially of all the Representatives in Congress of the trans-Mississippi West. The national park is a memorial to those who made the West a part of the Nation. It seems inconceivable that Congress—which has freely commemorated lesser men and lesser events—will not raise this monument to Jefferson and those others who laid the foundation of the grandeur and the power of the United States.

Another Member of the Eisenhower Clean as a Hound's Tooth Club

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I

herewith include an editorial from the St. Louis Post-Dispatch on the subject of conflict of interest in the Eisenhower administration.

On Monday last I made remarks in the House referring to a Meet the Press appearance of the former Governor of New York Thomas E. Dewey. With these remarks, I inserted an editorial from the Post-Dispatch listing members of the Eisenhower Republican Clean as a Hound's Tooth Club.

The editorial herewith presented adds another name to the membership in that club:

AN UNEVEN DOZEN

We hereby amend a recent editorial listing 11 cases of conflict of interest during the Eisenhower administration. Earl C. Corey, former director of the Agriculture Department's commodity office in Portland, Oreg., has told Senators that he made an \$83,250 profit from a silent partnership in a company storing Federal grain, and owned stock in three other grain companies. Mr. Corey swore that he never heard of the conflict-of-interest regulations until mid-1959. He did not resign until January 22. The announcement of his resignation by Secretary Benson did not come until a Senate subcommittee scheduled a public hearing a few days ago. For the record, now there are 12.

Need for Hospital Care

EXTENSION OF REMARKS

OF

HON. ROBERT E. COOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. COOK. Mr. Speaker, in the March 15 edition of the Willoughby News-Herald, of Willoughby, Ohio, the following article appeared which shows the findings of the Citizens Hospital Study Committee of Cleveland, concerning the need for hospitalization of the various age groups in our society. I think it of great significance that the report shows our elderly citizens are frequently hospitalized for extended stays. In many instances, this group is the least able to meet the present day high costs of adequate medical care and hospitalization.

OLDER YOU GET, MORE HOSPITAL CARE YOU NEED

The older you are, the more likely you are to need hospital care.

By the time you reach 65 years of age, you are in a group requiring seven times the amount of hospital care needed by youngsters under 15.

You will spend as much time in the hospital after your 47th birthday as you did in the entire preceding 46 years if you are typical.

From findings such as these, the Citizens Hospital Study Committee of Cleveland today traced to advancing age the chief responsibility for increasing the average adult's need for hospitalization. The number of persons in each age group has great importance in community hospital planning, the committee pointed out.

Detailing further findings from its analysis of 52,289 hospital cases, the committee indicated the average need for hospital care begins to climb from a low point reached at

about 15 years of age. Thereafter, it mounts steadily throughout the balance of life, except that the peak in obstetrical cases affects women in the childbearing years between 20 and 35.

In general, the report showed:

Large variation in the extent of hospital care by age.

Young people requiring hospital care and old people a great deal.

Many young women in their twenties and early thirties rendered obstetrical care, but with relatively short lengths of stay.

Few teenagers hospitalized and those few not staying long.

Old people to be frequently hospitalized and for extended stays.

"These facts are of greatest importance both in planning our community's needs for hospital beds and in making proper provision for our increasing proportion of older people," the committee report stated.

For all types of cases in short term hospitals, the average patient remained in the hospital for 8.3 days, according to the report. For obstetrical cases the average stay was 5.3 days; for medical and nonoperative cases the average was 9.7 days; and for surgical cases, 8.9 days.

Battle for the Free Enterprise System

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks I would like to include an article written for the magazine, *Purchasing*, by our able colleague, the Honorable THOMAS CURTIS, of Missouri. In his very keen, analytical manner, Mr. CURTIS has pinpointed the one overwhelming issue of today—the battle for the free enterprise system. Unless we win that fight and stop the headlong rush toward socialism, then our efforts in other fields are futile. I commend Mr. CURTIS' article to every thoughtful American:

TOO MUCH RELIANCE ON FEDERAL GOVERNMENT TO SOLVE ECONOMIC PROBLEMS—CURRENT CONGRESS WILL PUSH TREND TOWARD SOCIALISTIC STATE

(By Representative THOMAS CURTIS, of Missouri)

There are many issues which face the 2d session of the 86th Congress which are delineated economic. Many of these issues stem from the expressed desire of professional economists, businessmen, and politicians to have continued healthy economic growth coupled with maximum employment and reasonable price stability.

The Joint Economic Committee has recently completed a concentrated 10-month study into various aspects of these three goals—not without regard to whether the goals themselves are mutually inconsistent and, if they are inconsistent, which goals should bear the sacrifice in resolving an inconsistency.

I will list a few of the subjects upon which the Joint Economic Committee will make comments throughout the year. The farm program, antitrust legislation with particular reference to a phenomena which many economic observers claim to have seen and others claim does not exist—administered prices, Federal debt ceiling and interest rate

ceiling on Federal securities, Federal Reserve Board policies on monetary policies and their relation to debt management, standby controls on credit and prices, legislation relating to the problems of industrywide strikes, Government purchasing policies, Federal expenditures for depressed areas, education, community facilities, health and public works, and a balanced budget.

The longer I serve in Congress, concentrating as I do on economic matters, the more concerned I become about the inarticulateness of those who believe in the private enterprise system—particularly vis-a-vis those who profess to believe in it and yet are constantly undermining its basic structure.

STUDY PROBLEMS

The staff of the JEC's study of employment, growth, and price levels is a case in point. The purpose of the studies of the JEC is:

(1) To take an objective look at our political-economic structure to try to discover the problems that exist.

(2) To bring into the open the various proposals that had been made to solve the problems.

(3) To subject these proposals to criticism.

I find that though the hearings and the papers prepared by the panelists do just that, the staff's report sets out its own particular series of solutions instead of the alternative solutions advanced by the panelists and others. The staff's solutions, almost without exception, rely on increased Federal Government activity and disregard whatever additional activity there might be in the private sector of the economy. The staff's analysis, in my judgment, shows a lack of understanding of what the private enterprise system is about or a basic distrust of it.

The significance of the staff's report is that the members of the staff are outstanding, hard-working, and honest scholars. The question that therefore disturbs me the most about America and its future is this: Has scholarship in America reached a point where scholars do not know how to approach a subject to study and write about it objectively?

I shall call attention to just a few points:

1. The staff avoids the use of the term "administered" prices, which is commendable because the term begs the question. But its report, instead of discussing the economic issue involved, supplied another term, "market power," which just as effectively begs the question.

The question at issue is this: In certain industries, is there such a concentration of market power that prices can be set without regard to the economic consequences? If so, is this a matter that should be within the scope of the antitrust laws?

During the hearings, when this issue became the subject of discussion, I asked why the industries accused of "administering" prices were frequently the very industries that spent more time and money on market analysis and customers' buying habits than other industries. If these industries were trying to get information so that they could pay attention to the laws of economics (not try to abuse them) then the so-called "market control" they possessed would appear to be healthy, commendable, and a matter for other businesses to emulate—not something to be held up as against the public interest.

2. The staff report consistently ignores real cost factors in discussing price increases. For example, what has been the economic cost in steel resulting from the depletion of the Mesabi Range, if any? What has been the cost in medical care arising from increased cost of doctor training, advanced type hospital equipment, increased research and development in drugs, etc?

It is almost axiomatic that rapid technological growth has increased costs through making much equipment and many skills

obsolete. The staff report advocates more money—and Federal money to boot—in the field of medical research and development, without commenting upon the basic fact that we are in an economic imbalance today resulting from the technological revolution we are still experiencing in health matters.

3. Although the price of living indices have advanced most rapidly in the area of services, the cost factors underlying services remain unexamined and receive little or no comment. In this conjunction also are the economic factors underlying "tight" money. Essentially there is a shortage of investment capital, resulting from increased demand. It seems axiomatic that demand for investment capital is bound to increase rapidly.

4. The staff pays little or no attention to the question of determining what is economic growth and what proves to be economic waste. Little attention is paid to the limitations we experience in the tools we use in measuring economic growth.

Economic growth may be unhealthy and misshapen growth. The gross national product includes economic mistakes as economic growth. The GNP fails to measure production capacity; it weighs only actual use of capacity in a given year. Rome was not built in a day, so it is true that no economy was built in 1 year. What we have from the past which is still usable is as important as what we might build in a given year. That becomes a part of the accumulated capital plant which the measurement of annual growth fails to compute.

Essentially, the staff report fails to recognize the keystone of the private enterprise system—which is the use of the marketplace as the tester of economic ideas, as opposed to the use of select groups of men to judge new economic ideas.

The private enterprise system is to the science of economics what the trial-and-error system, the laboratory system, has been to the physical sciences. The planned economy system is what the scholastic system was to the physical sciences in the Middle Ages, when chemistry was alchemy and astronomy, astrology.

Until those who believe in the private enterprise system really understand that which they believe in to the extent that they can become articulate about it, the battle for the private enterprise system being fought in the Halls of the Congress will continue to go against them. This second session of Congress will provide no change in this pattern. The logistics and strategy have already been set. Tactics at this time cannot win the battle, although they may delay things until the proper logistics and strategy are developed. I won't predict in which areas the marketplace will be replaced by political bureaucrat decision by the action of Congress, but when the session has ended we will have moved closer to the socialistic state.

Centenary of William Jennings Bryan

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article which appears in Labor, the official weekly newspaper of Standard Railroad Labor Organizations, on April 2, 1960. The article entitled "Anniversary Recalls Famed Battles by Bryan for Labor," follows:

ANNIVERSARY RECALLS FAMED BATTLES BY BRYAN FOR LABOR—MILLIONS WERE SWAYED BY 'GREAT COMMONER'

Many newspapers during the past week carried feature stories on the late silver-tongued William Jennings Bryan to mark the 100th anniversary of the birth of the "Great Commoner." Most of the stories stressed his leadership of the "silver bloc" and his famous "Cross of Gold" speech at the 1896 Democratic Convention which led to his nomination as candidate for President.

Few, however, mentioned the fact that during his career he was a friend of labor, and in most of his campaigns he had strong labor support.

When he died in July 1925, the secretary-treasurer of the AFL at the time—Frank L. Morrison—pointed out that Bryan's voice "was always heard in favor of legislation urged by organized labor."

As an example, he cited a battle by Bryan to assure for labor the right of a jury trial in contempt cases. Also, he declared that Bryan's "most efficient work" in labor's behalf was usually done "in conference."

Morrison recalled a significant instance of that in 1914 when labor was pressing for enactment of the Clayton amendment to the Sherman Act, so as to curb the use of anti-trust legislation for union-busting purposes and to free unions from rule by injunction.

President Woodrow Wilson was being pressed at the time by industry and by reactionary elements in his own party to oppose the Clayton amendment. Morrison said the officers of the AFL appealed to Bryan (then Secretary of State) for help, and within the Cabinet, the Commoner swung Wilson and the administration behind the drive to pass the Clayton Act.

"CROWN OF THORNS"

Bryan gained his first fame during his two terms in Congress from 1892 to 1896, as Democratic Representative from the normally Republican district of Lincoln, Nebr. He became a leader of the fight for the "free coinage of silver" at a 16 to 1 ratio with gold—an issue that stirred immense enthusiasm in the West, where "hard money" spelled hard times, but Bryan aroused the fury of the gold standard advocates in the East.

It became the main issue in the State-by-State battles for election of delegates to the 1896 Democratic Convention. At that convention, Bryan swept the delegates with the famous speech, in which he proclaimed: "We will answer their demands for a gold standard by saying to them: You shall not press down upon the brow of labor this crown of thorns, you shall not crucify mankind upon a cross of gold."

LOST THREE TIMES

The speech insured his nomination as presidential candidate. In the campaign that followed, Bryan stirred great fervor, but also great opposition. Frightened financiers and industrialists poured vast sums of money behind William McKinley—and the latter beat Bryan by a big majority.

Twice thereafter, Bryan went down to defeat as the Democratic nominee, but he played a big role in the 1912 convention in putting over Woodrow Wilson. When Wilson won, Bryan was rewarded with the post of Secretary of State.

As the Nation's leading orator on the chautauqua circuit, he continued to sway big audiences, but public sentiment shifted sharply when, as one of the last acts of his career, he choose to aid in the Tennessee prosecution of John T. Scopes, a science teacher accused of violating the law against teaching of evolution.

In that famous trial, Attorney Clarence Darrow, defense counsel for Scopes, shredded Bryan's fundamentalist views. The trial became a laughing stock for many Americans, though Scopes was convicted, and Bryan died 5 days later.

Sweden's Action Concerning Anti-Semitism

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. MULTER. Mr. Speaker, the U.S. House of Representatives very properly adopted House Concurrent Resolution 465, expressing its profound sense of indignation and shock at the epidemic of desecration of places of worship and other sites.

During the recent outbreaks of anti-semitism in many countries, it was said that the headquarters of the movement was located in Sweden. The Swedish Minister of Justice, Mr. Herman Kling, on January 27, 1960, told the Swedish Parliament what measures had been taken and would be taken to prevent and punish manifestations of racial discrimination in Sweden. He and his country are to be commended for their intelligent and vigorous approach to the problem.

I commend the minister's remarks to the attention of our colleagues. They are as follows:

REPLY GIVEN BY THE MINISTER OF JUSTICE TO INTERPELLATIONS BY MESSRS MUNKTELL AND RIMMERFORS, MEMBERS OF THE SECOND CHAMBER OF THE SWEDISH RIKSDAG, CONCERNING OUTBREAKS OF ANTISEMITISM IN SWEDEN

Mr. Speaker, with the permission of the chamber Mr. Rimmerfors has asked me whether I consider that the antisemitic demonstrations which have occurred in Sweden should lead to legislative or other steps calculated to check the propaganda activity which is detrimental to Sweden's reputation abroad and is still apparently being carried on.

Mr. MunkteLL has also asked the Minister of the Interior whether he is prepared to inform the chamber what measures have been taken to ascertain whence the latest outbreaks of antisemitism in Sweden emanate and what measures have been taken or will be taken to prevent and punish such manifestations of racial discrimination and persecution in the future.

In view of the close connection between the two interpellations I propose, by agreement with the Minister of the Interior, to reply to both of them at the same time.

To begin with, I would emphasize in the strongest possible way how abominable I consider every form of racial persecution and inflammatory propaganda directed against people on the grounds of their origin or their religion. I am convinced that there is a very broad basis of public opinion in our country which strongly condemns antisemitism and other phenomena of that kind. The part that antisemitism played under the Nazi regime in Germany and the terrible fate which many millions of people suffered as a result are still fresh in everyone's memory.

At the end of 1959, as is well known, there occurred in various places in Western Germany a number of antisemitic demonstrations and other incidents of a more or less serious character. The details of these happenings were quickly taken up as topical items by the press, the radio and the television. Within a short time similar phenomena made their appearance in other countries all round the world.

In Sweden the first incidents occurred shortly after the new year and since then antisemitic demonstrations have occurred at a comparatively large number of places in this country. To an overwhelming extent these demonstrations have taken the form of daubing up swastikas and antisemitic inscriptions; in a few cases, however, the demonstrations have been of a more serious character.

In some of these cases it has been possible to apprehend the perpetrators. In these cases the persons concerned proved to be youths of school age or slightly older who have got involved in the demonstrations out of mischievousness and lack of understanding. Two 15-year-old boys—one of them had run away from his home and the other had escaped from a reformatory—have stated that they were led to do what they did by the recent statements in the press about anti-Semitic activities. They declared that they had no anti-Semitic feelings and were not interested in politics. In another case the swastika-painting was done by a person who was probably not fully accountable for his actions.

According to information furnished by the police it is not, at any rate in Sweden, a question of any organized action. Mainly it seems to be a matter of acts by mischievous youths and other immature persons who have probably been inspired by statements in newspaper articles and television and radio broadcasts about the demonstrations in other countries.

Nevertheless I would not wish to belittle what has happened. Even if it is correct, as the police consider, that these actions are the expression of an epidemic of mischief-making, this is serious enough. That Swedish youths should be so badly informed that they can be infected by such a phenomenon is highly deplorable and constitutes something that we must combat with all our strength.

This is one side of the matter. But there is another side, too, and that is the Nazi and anti-Semitic propaganda which is being disseminated in print both inside and outside Sweden by certain circles operating in this country. We have a number of fanatical individuals who have long been carrying on anti-Semitic propaganda both here and abroad. And I must state with deep regret that some of the propaganda material which has recently come to light abroad emanates from Sweden.

In those cases where the printed propaganda is in such a form that it is covered by penal provisions, action has been taken. A number of prosecutions on these grounds were instituted by my predecessors in office. And only a few days ago, when after a rather long interval a number of anti-Semitic pamphlets were submitted for scrutiny to the Commissioner for the Freedom of the Press, I handed these over to the Attorney General for prosecution. In some of these pamphlets the name of the publisher is that of a person who has long been known for anti-Semitic propaganda and who has already been convicted several times for such activities.

It is hardly necessary to say that the incidents which have occurred in our country have led to searching inquiries. All the data in the particular cases are examined centrally by the police and collated with what is otherwise known concerning the political tendencies of various organizations and of certain individuals. In view of the nature of the matter, I cannot go into details about how this work is being done, but I can assure the chamber that a very thorough investigation is being carried out and that the development of events is being followed with the very greatest attention.

If I were asked how such repulsive phenomena as racial hatred and inflammatory propaganda can be countered, my answer would be that the most effective means, at

any rate in the long run, is information and education of the rising generation in respect for human values. But as will already have appeared from what I have said, it has proved necessary also to take legislative measures. Under the impact of the persecution of the Jews in Germany before and during the Second World War and the manifestations of anti-Semitism which occurred in our country in connection with that persecution, provisions were incorporated in the penal code in 1948 providing for punishment of incitement against any group of the population. Under these provisions "anyone who publicly threatens, slanders, or insults a group of the population having a certain origin or holding certain religious beliefs," is liable to punishment by fine or imprisonment. This protection is not limited to groups consisting of Swedish citizens; it applies to any group of the population having a certain origin or holding certain religious beliefs. As concerns propaganda disseminated in print, provisions in the ordinance on the freedom of the press insure that incitement against any group of the population as defined in the penal code can be prosecuted as an offense against the freedom of the press.

We now ask whether our present legislation is sufficient. So far as propaganda through printed publications—which, of course, constitute by far the most important means of disseminating propaganda—is concerned, I wish, first of all, to emphasize that one of the basic principles in our system of protection of freedom of the press is that no censorship preceding printing and no prohibition of printing may be imposed. Thus the dissemination of publications calculated to stir up racial hatred cannot in Sweden be countered by the authorities through obstacles set up in advance but only through action taken subsequently, insofar as such publications are deemed criminal. In these circumstances it is urgent that the reaction of the penal system should be such that it achieves the necessary inhibitory effect. As I have just mentioned, the punishment for instilling hatred against groups of the population consists of fines or imprisonment. As a result, the courts have generally imposed fines, which perhaps have been paid by financiers who have been behind the person announced as the publisher. So far as I know, imprisonment has been imposed in only one case. In the proposals for a new penal code which, at the instance of my predecessor in office, have been submitted to the Council on Legislation the provision on incitement against groups of the population has been incorporated in what is essentially the same form as before, apart from a revision, due to technical reasons, of the latitude of punishment. Having regard to what has happened recently, however, I consider it justifiable to consider whether the latitude of punishment for incitement against groups of the population should not be revised, for example, in such a way that imprisonment would be made the normal punishment and that fines would be imposed only if the offense is not of a serious character. It is my intention to take up this question in connection with the reviewing of the draft penal code for the new submission to the Council on Legislation which is at present proceeding in the Ministry of Justice.

In practice it has often proved to be difficult to take action against printed propaganda of this kind, partly owing to the legislation on the freedom of the press, but also owing to the fact that the printing firms which allow themselves to cooperate in this propaganda do not always observe the regulations on the liability to submit copies of printed matter for scrutiny and owing to the fact that this propaganda material is often printed in widely differing parts of the country. I have therefore given consideration to the measures which might be taken to coordinate and render more ef-

ficient the supervision which at present exists in this sphere. Here I refer not only to purely anti-Semitic propaganda but also to other forms of inflammatory propaganda and nazism.

In addition to legislative and supervisory measures it is of course, as I mentioned a little while ago, information and education that in the long run constitute the best and most effective means of counteracting racial persecution and inflammatory propaganda. The essential thing is to teach young people to understand the importance of the common human values. Parents, schools, newspapers, the radio and the television have a great responsibility here.

To take the schools first of all, it is of course important that efforts should be made to try to combat all tendencies to racial prejudice while the children are still young. I have also satisfied myself that the board of education is very much aware of this question. In the instruction in history and citizenship, care is taken to see that the Second World War and the events leading up to it are studied and the text books are continually examined with a view to removing anything which could in the least way operate in a wrong direction and also to introducing adequate information about the phenomena we are now concerned with. But in the religious instruction, too, the schools should be on the watch to see that racial prejudices are not instilled into the very young.

The newspaper press, the radio and the television obviously have an important function to perform in the service of information. It is gratifying to be able to note the strong reaction against the recent anti-Semitic demonstrations which has been evoked in the Swedish press. It is important that our newspapers should continue on this path, but they should at the same time be aware of the risk of presenting and apprehending these phenomena only as sensational news material.

I also mentioned the great responsibility of the parents. And in this connection I would express the desire that all parents should take an active part in the efforts to counter inflammatory propaganda. Let us explain to all our children the meaning of what they have been seeing lately in the newspapers and on the television. Let us tell them what the swastika has been and is the symbol of. Let us tell them that millions of people died because of the inflammatory propaganda which the Nazi regime in Germany conducted before and during the Second World War, and that all this suffering was inflicted on innocent people merely because they were considered to belong to another race. Let us teach them that tolerance toward other groups of the population and toward those who think otherwise than we do is one of the principal marks of democracy and the best basis on which to build our future.

If all democratic forces unite to work together in support of these measures we shall be able to increase our vigilance against anti-Semitic and Nazi propaganda in the best and most effective way.

Unrequited Love

EXTENSION OF REMARKS

OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks I include herewith an editorial written by Mr.

Robert Ingalls in the Corvallis (Oreg.) Gazette Times:

UNREQUITED LOVE

Teamsters in this area who have no great love for their boss may be encouraged by the knowledge that there are others of their brethren who seem to feel the same way.

Jimmy Hoffa started out after the recent convention of his 1,776,000-member union, the biggest and roughest and strongest in the country, to demonstrate that the rank and file "love Jimmy." He appeared before 13 local unions from Tampa, to St. Louis, to Chicago and Milwaukee to New York.

The New York meeting was to be the climax. With 150,000 Teamsters in the metropolitan area, arrangements were made to fill Madison Square Garden's 15,000 seats. Loudspeakers were attached for the expected overflow outside and police were set to detour traffic for blocks around the hall.

It was a great idea, only the rank and file did not turn out. Those who did, together with members of many of their families, barely filled half the auditorium. As a demonstration of affection and loyalty it was a blooper.

Hoffa told the few who came to hear that he plans to build a web of union alliances covering millions of workers as an answer to the Landrum-Griffin labor reform bill. He said he would have all unions arrange common expiration dates for their contracts to bring them into line with those of the Teamsters. Thus, they will be able to circumvent the law's ban on secondary boycotts.

In spite of the lack of affection for the boss by union members, Hoffa's power must not be overlooked. Through coercion and other tactics he has control of the membership and his threats carry a lot of weight. The only way to curb him and others of his ilk is for the membership to get rid of such leaders and the best way to make this possible is for the voters to insist that legislation give control of unions to the rank and file and that unions be subjected to the same laws that govern other corporations.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentations be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

A Blueprint for American Space Leadership: Rockets for Peace

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 31, 1960

Mr. WILEY. Mr. President, it was my distinct pleasure and honor this afternoon to speak before the American Rocket Society, National Capitol Section. The talk which I gave was entitled "A Blueprint for American Space Leadership: Rockets for Peace."

Mr. President, I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A BLUEPRINT FOR AMERICAN SPACE LEADERSHIP: ROCKETS FOR PEACE

(By Senator ALEXANDER WILEY, Republican, of Wisconsin, ranking Republican on the Senate Foreign Relations Committee, and member of the Aeronautical and Space Sciences Committee, before the American Rocket Society, National Capitol Section, on March 31, 1960, Washington, D.C.)

Ladies and gentlemen, appearing here today before this distinguished group of industry representatives, military brass and scientific high-brows, I must confess that I know only little about high military strategy, or the complexities of space engineering. Neither am I running for the Presidency as an expert on these matters. Yet, I am very pleased to respond to your invitation and meet with you, because you are the actors and the directors of the most colossal—and as a thrifty Republican let me add, most expensive—human adventure drama, ever.

Since the days of antiquity, man has constantly been moved by his innate restless spirit to explore the unknown about him. What would human life and human history have been without this constant search and thirst for discovery—this determination to know what is beyond the horizons—physical and spiritual?

In world history, Homer's *Odyssey* still stands out as a symbol of man's search. My ancestors, the Vikings, continued this search in their daring explorations—which in all likelihood brought them to this continent long before Columbus. The American West gave our own youth, during last century and this, another frontier for discovery. And now, as if to guarantee that the youth of tomorrow may not be deprived of its own unknown frontiers—nature is beginning to unlock the unbound horizons of space. The inquiring mind is on the go.

THE MILITARY ASPECTS OF SPACE

Space has many uses: Peaceful and martial, constructive and destructive. In recent weeks I spent long hours listening to testimony after testimony on the U.S. defense program before the joint sessions of the Senate Space and Preparedness Committees.

We had many experts before us. Somebody jested that it was obvious they were all experts—because they disagreed with each other.

I heard much debate about whether there is or there is not an American "space lag". There was much debate—yet there was the basic agreement that we have nuclear weapons that far exceed the destructive power of U.S.S.R. weapons, and that our total carrying capacity for a long range delivery of a nuclear attack far exceeds theirs.

I also feel it incumbent upon myself in this connection to stress that I do not always agree with the "military mind," which too often equates security with numbers. I do not necessarily believe that in order to possess security and military deterrence this country must match every Soviet ICBM, submarine, tank and cannon, one for one. Security and deterrence against aggression consist of much more than mere numbers.

We must give full credit to the strength and determination of our allies. We must recognize the moral, psychological and economic force of the new uncommitted nations who cry for peace in order to survive and flourish. And we need remember, furthermore, that the one billion people behind the Iron and Bamboo Curtains are constantly striving—because such striving is inherent in human nature—to better their lives, to have their voices heard—and to keep out of war. These and other factors must be taken into account in determining whether this Nation is sufficiently equipped not only to defend itself, if the need may arise, but also to deter any aggressor from undertaking such a dangerous escapade.

Yet, this is not what I want to discuss with you today. This meeting today between you, the technical experts, and myself, a representative of the people and one of their political spokesmen—offers an excellent opportunity to discuss not merely the technical and military aspects of the space challenge—but some of its political and philosophical implications.

SPACE—A POSITIVE PROGRAM FOR INTERNATIONAL COOPERATION

The challenge of space is not new. In fact, it is probably as ancient as man himself. For since the beginning of time there has never been a period when man has not been actually aware of space and of certain manifestations of space—the vastness of the sky, the sun, the moon, the myriad stars, the alternation of day and night, the procession of the seasons, and the vagaries of the weather. Man has always felt it his destiny to conquer nature; but while he was able to make the land and the water serve his purpose, the realm of the air and the vastness of the universe that might lie behind seemed denied him.

Now, only some 190 years after Watt's invention of the first effective steam engine, and 50 years after the first heavier-than-air flying machine, the dream of space knowledge, travel, and conquest may become a reality. American and Russian breakthroughs in recent years now suddenly make the whole wide horizon of space open for human exploration.

You, physicists, engineers, and space experts of all types will guarantee—I am sure—that progress continue. But to me, technical space progress does not suffice. I am constantly concerned not merely about whether

the launching of our next rocket will be a success, but also about what this technical progress will mean to society, to this Nation, and to the individuals inhabiting this earth and this big country.

Recently we heard much discussion and much propaganda about peaceful coexistence, arms curtailment, and even total disarmament. Disarmament is a fine concept and an aim worth striving for.

Still, disarmament by itself, if effective, is merely a passive act—one which guarantees what the nations will not do. Disarmament fails, however, to provide for an active constructive substitute. But I ask: What will take the place of the arms race? Let me give you an example from every day's life—from the memories of my youth and of yours.

Disarmament between nations can be compared to two boys who have been quarreling for a long time and who have finally been made to put down their clubs. Yet, there is nothing to prevent them from picking up these clubs again at any time, or from engaging in a fist fight, or from expressing their hostility in any other manner. To have peace between these boys it is not sufficient merely to have the club put down; what is more important is to give these boys an undertaking in which they could both participate. To accomplish true disarmament and lasting peace, it is likewise important to give the nations an undertaking in which they could all participate—in which their youth could take part; towards which their ingenuities could be utilized, and in which their pent-up energies and ambitions could find release. It is for such positive and productive peaceful endeavor that I am calling here today.

ROCKETS FOR PEACE

Rockets have long been terrifying symbols of warfare and destruction. In the last days of the Hitlerite empire, Nazi rockets became a symbol of world conquest and subjugation. Of all frightening sounds, the high-pitched whistle and cry of the V-2 was the most terrible to the ears of the inhabitants of London. Rockets meant indiscriminate destruction, dismemberment, death. And worse yet—they meant fear, terrible fear. At this time again, rockets are a potential threat to the life of every citizen of this world, in military uniform, and without uniform, on the front lines and on the home front.

Fear has again become an overpowering element in human life. But in the language of a recent best-seller and motion picture—"On the Beach"—I would like to say to you today: "It is not too late, brother." It is not too late to have fear changed into hope, to have destruction replaced with construction.

Here is an opportunity for statesmen to break through the manmade barriers of distrust and hate. We must not, in this exploratory age, repeat the mistakes of the past centuries when the nations explored and warred and bled. Wars were then the order of the day. Cannot this great desire to know be made a vehicle that will bring the human family together?

It is especially because of the tremendous destructive potential of rockets that an emphasis on their peaceful utilization can be most dramatic. The same equipment that can be used to launch warheads can also be used for useful scientific research in space.

The same wealth and manpower that can be wasted on schemes of destruction can be used for a worldwide program of space cooperation and construction. To me, the future of closer international cooperation lies more in a positive and aggressive program of this type than in a mere preventive program of disarmament.

The new horizons of outer space, which all nations share, offer new frontiers for cooperation on a supernational level. In the progress of mankind from its less complex social organization to the elaborate modern state—each new structure was designed not to replace those already existing, but to supplement them. The future of international cooperation lies, therefore, not in an endeavor to supersede the family, state, or nation—but in an effort to provide new structures and tools for enterprises that require the mental and physical resources of many nations.

Future international cooperation will thus be most effective in the development of regional economic units, in international planning of social and economic developments, and in the maintenance of a machinery for the preservation of peace. But unparalleled opportunities are offered by new scientific endeavors which would require the combined skills and resources of our whole planet.

The atoms for peace program, initiated in 1953, is an excellent example in point. More exciting yet, is the opportunity for close international cooperation in space. The unlimited territories of space make us realize more than anything else the unity of this globe. They emphasize the need for all nations to work as a team in order to conquer outer space for the benefit of the race.

This is why I am proposing here today the formal adoption of a rockets for peace program as a national goal. This program that I now propose, and for which I shall endeavor to obtain the support of my colleagues in Congress, will be designed to emphasize the peaceful uses of space. It will be designed to provide America and the free nations with their own independent space programs—regardless of what the Kremlin may be doing or planning, though we feel the job is big enough to wipe out differences, even with the Kremlin.

ROCKETS FOR PEACE—A PRACTICAL PROGRAM FOR SPACE LEADERSHIP

The rockets for peace program will be devoted to the study of climate, its forecasting and its improvement. Last year I made a proposal for the setting up of an international weatherman. I said at that time that we could build a satellite for weather forecasting, and make available to all people our code of communication with it. Thus, meteorologists the world over could direct their inquiries to the satellite and obtain whatever information they desire. By advanced warnings such a satellite could save lives and property the world over. I am now informed that a weather satellite will soon become a reality.

Recently the Russian papers carried a proposal for the creation of eternal spring on this planet—through the sprinkling of chemicals in space. But before we treat this proposal seriously, let us first look to see how much it is going to cost—remember, this is election year—and what eternal spring will do to the temperament and energies of our people.

Peaceful space research could be utilized for the improvements of communications. Communication satellites offer the promise of relaying interference-free transmissions between any two points on the globe at any time. They can make transatlantic television a reality. But I am sure you know more about the technicalities of this than I do.

Research vehicles will be able to make measurements in space, and report on the

various extra-terrestrial hazards that man must face when he follows these instruments into the heavens. Space stations serving as laboratories will also offer us an opportunity to conduct experiments that will better reveal to us the mysteries of plant and animal origin, growth and change. Possibly, changes in plant and animal life which may require thousands or millions of years to accomplish on earth, could be undertaken in hours or days under space conditions.

Space is the frontier of tomorrow. How shall we conquer it? I believe that in calling today for a rockets for peace program as a national goal, I am proposing a practical program. As part of this program I envision the following:

1. Close cooperation between the Government and scientists of America and other countries in establishing satellite observation and tracking posts.

2. Making training facilities in this country available for promising space scientists from this country and from abroad.

3. Cooperation between American scientists and scientists of other nations in an international braintrust.

4. Cooperation between American scientists and American Government with the existing space research agencies in the United Nations and elsewhere.

5. Making small scientific rockets available to other nations to conduct their own experiments; some of the scientific rockets are very small and inexpensive. We can make them available at cost to other nations—who may proceed to use them and thus add the obtained information to the total store of space knowledge.

6. Provisions for cooperative international projects in the launching of rockets and missiles. NASA, I understand, has been negotiating for such projects with several other nations, including England, Australia and Canada. More should be forthcoming.

7. The establishment of a space academy to train both those going into space and those directing such missions.

Ladies and gentlemen, if we undertake cooperative peaceful projects that make the fruits of space research available freely to all nations—we could well maintain a national pride in our space efforts, and in international prestige essential to the position of world leadership which we now enjoy, and which we have no intention of relinquishing.

It has been said that whether we like it or not we are engaged in a worldwide prestige race with the Soviets. Our competitor in the space race is tough and determined. He is willing to deprive his people of consumer goods in order to channel more resources into space research. Can we afford to be second best? Should we not channel our riches to exploration and improvements rather than luxury? Or should we not see if the Kremlin would go along in a cooperative effort to widen the horizons of the human mind? They have not usually joined us in our previous international cooperation programs—but possibly we could get their cooperation this time.

This country is in an economic and political position to marshal the scientific resources of the free world for such peaceful uses of outer space. Surely, the other nations and the other people will be enthusiastic and local partners when they are invited to share in this great human adventure—and the push into space, into the wonders and mysteries of the origin of matter and of life, can offer an unbound challenge.

SPACE—A FRONTIER FOR MATERIAL AND SPIRITUAL EXPLORATION

We all realize that, as yet, we do not fully know and cannot fully predict what space exploration may mean in years to come. In future years, it may well be said of our space pioneers what was once said of Columbus:

"When he started out he didn't know where he was going, when he got there he

didn't know where he was, when he got back, he didn't know where he had been, and he did it all on borrowed money."

We may not know exactly where we are going, or what we may find. Yet, there is a great feeling of exuberance and a great sense of human mission in the work that lies before us. Let us make sure our aims are high and our purposes worthwhile.

Rocket expert Wernher von Braun recently said:

"It is impossible to predict the nature of all these discoveries; their cumulative effect will be tantamount to a scientific revolution. But it will also be a revolution of human perspective. We need not fear that future space explorers on their heaven-storming journey will lose their humility. The heavens will surround them as an eternal reminder that there is a force greater than the thrust of their rocket ships and a spirit greater than the cold logic of their computers."

It is on this note that I want to close today.

We have, up to now, been discussing material rockets for peace. But let us remember that the biggest rockets in the world today are ideas. Someone once said:

"Beware of a man with an idea, he will turn the flank of history." We have seen how ideas have changed the course of history. Our own concept of popular government has overturned kingdoms and empires and brought into the hearts of the discouraged and the have-nots hope for a better day.

Today we are adventuring out beyond the horizons of yesteryear in every direction, we are plumbing the depths of the sea, the far reaches of the sky. We are talking about putting the human being on the moon, or further still, on some of the other galaxies. While we are doing that let us always remember what Browning said:

"That life has meaning and to find its meaning is man's meat and drink."

Let us remember that the meaning of the real life lies not only in the exploration of the material frontiers but in the exploration of the things of the spirit.

We must, therefore, match our material discoveries with spiritual counterparts, or else we will find out that we are spiritually poor in a world of material plenty. For spiritual rejuvenation we need a new type of rocket. Some that will pierce the minds of mankind, cleanse them of daily weaknesses and petty blindnesses, so that man can venture free from creeds and limitations to find the meaning of life and God.

A few years ago the publisher of a small weekly newspaper in a small North Carolina town proposed that to counter the Soviet Sputniks America send up a special type of satellite: one that has no practical mission—one that will be designed to merely shine in the skies and serve as a symbol of hope and good will. I can think of no more dramatic a means for launching our rockets-for-peace program than the sending up of such new star of hope—possibly in time to shine aloft and to symbolize our spiritual inspirations—during the coming Christmas season, this year yet.

Ladies and gentlemen, it was a great pleasure meeting with you today.

An Open Letter to Congress

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. REECE of Tennessee. Mr. Speaker, the Farm and Ranch magazine

which is, by all means, the leading magazine on the business of farming in the Southeast, conducted a survey among the farmers recently which I feel should be called to the attention of the Members.

The results of this poll, as can be readily observed, substantially support the agricultural program of Secretary Benson and this administration. Sixty-one and two-tenths of the farmers believe in a free agriculture, and 70.8 percent want no support or none except in an emergency. Another significant fact is that 86.8 percent of those polled own, rent, or operate a farm.

The editor of Farm and Ranch, Mr. Thomas J. Anderson, Nashville, Tenn., is rendering a great service to the farmers in the areas which his magazine covers. The areas covered by this poll include West Virginia, Maryland, Delaware, Virginia, Kentucky, Tennessee, North Carolina, and smaller areas of South Carolina, Georgia, Florida, and Alabama.

The survey follows:

AN OPEN LETTER TO CONGRESS

Gentlemen, let's face it: You are not farmers. You never have been, you never wanted to be; and you never will be. You know very little about it.

You stand on a stump sometimes and "play like" you are a farmer * * * because you may now own a farm, or dream of days you spent on a farm as a boy. But the facts are, you inherited your farm or bought it after you got the money some other way. You usually pay somebody else to run it; and use it as a handy tax-deduction gimmick. You still look on farming as a way of life; and talk stupidly about sustaining the farmer. You know very little of it as a modern science or business. How could you, since you lack both experience and the necessary time to really study the problem.

No. We're not guessing. One of your own Members checked it out for us. And the men who rifled your records could find only one Senator and six Congressmen who are anything close kin to being a farmer (names upon request), and only three of these are on either Agriculture Committee. These seven and no more—the other 530 of you can just quit pulling our legs.

Two years ago we explained in a survey that we want you to keep your clumsy, tax-grabbing, pittance-paying hands out of our business. Last year readers of another farm magazine repeated the demand—and corn farmers emphasized it by voting 3 to 1 against controls, when given a choice between freedom and a program of high supports with controls. Now we tell you again.

In preliminary results of a new Farm and Ranch reader survey—with approximately 2,500 returns in—the votes went this way: 61.2 percent for "no supports, no controls—a free agriculture"; 6.4 percent for "flexible supports with moderate controls"; 12.5 percent for "high, fixed supports and rigid controls"; 9.6 percent for "no controls or supports, except disaster payments in emergency"; 5.0 percent for "direct payments (compensatory) in cash"; 2.8 percent for "price supports based on a percentage of the previous 3 years' market price."

(NOTE.—70.8 percent want no supports or none except in emergency; 86.8 percent of voters own, rent, or operate a farm.)

Going on past performance, we expect you to ignore this plea again. Evidently you can't bring yourselves to believe that the majority of farmers are against socialism—in agriculture as well as in the other segments

of our economy. Get the Government out or we'll get you out.

(Signed: the majority of us (farmers) who answered a recent survey in Farm and Ranch.)

The Truth Gap

EXTENSION OF REMARKS

OF

Hon. EVERETT MCKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, March 31, 1960

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Secretary of Commerce at the Executives Club of Chicago on March 25, entitled "The Truth Gap."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE TRUTH GAP

(Address by Secretary of Commerce Frederick H. Mueller before the Executives Club of Chicago, Hotel Sherman, Chicago, Ill., March 25, 1960)

"It was the best of times, it was the worst of times, it was the age of wisdom, it was the age of foolishness, it was the epoch of belief, it was the epoch of incredulity, it was the season of light, it was the season of darkness, it was the spring of hope, it was the winter of despair, we had everything before us, we had nothing before us."

Every student has read that introduction to "A Tale of Two Cities" by Charles Dickens.

He was describing other times. Yet, any reader of today's headlines and today's political speeches might conclude that history is repeating itself, for current talk also swings in sharp contrasts.

The important question about present conditions is simply this: What is the truth?

For the shortage of the year is the truth gap in many discussions on both our economy and our defense.

I believe that an honest doubting Thomas will find in the sum total of facts this assuring answer: The United States is not on the skids—a washed-up, has-been nation.

The United States is first in military power, first in economic power and first in capacity to hold the lead against any competing combination. We are continuing to build unprecedented power to strengthen both prosperity and peace. The American people are not standing still or retreating. They are going forward under the wise, strong, capable leadership of President Eisenhower.

Only self-generated fear or folly can hold back our progress. Only our own tongue can dig our grave. Only blind eyes can fail to see our overall capability and our gigantic means already in gear for tremendous growth.

I would refrain from such a credo of confidence did I not believe I have evidence to back it up. I propose to present some of that evidence for your appraisal—and let the chips fall where they may.

Are we on the verge of a recession?

Not down a big no to that one.

Recent flip-flops of the stock market have produced a bit of indecision in temperamental Wall Street. Some are wondering if New Year forecasts need to be sharply revised downward.

Wall Street, however, is not Main Street. The stock ticker is a barometer of its own balliwick's feelings. It may accurately re-

fect reaction on stocks. It does not pretend to measure the entire production, development and mood of 180 million Americans. It could be that the market is merely getting back to normal after a lost weekend of inflationary boom talk.

Today's well informed businessman doesn't chicken at the growl of a Wall Street bear.

While it is important to watch the big board, it is even more important to watch the trustworthy national economic indicators. Many of these are collected by the unbiased statisticians and economists of the Commerce Department—taking the economic pulse of the entire Nation.

These objective surveys are more reliable than Wall Street blues, winter worries, and the home-brewed pessimism of certain self-seeking politicians.

The overall reading clearly indicates the vigorous health of the economy. We are not rushing into a frenzied inventory grab through fear of impending inflation. We are not shooting up in the roller coaster of boom which might later plunge down into a bust. That would not be good.

Instead, the indicators show that we are running along at a much higher level of business activity than last year and the outlook is for continuous progress for the year as a whole.

Where do we stand now?

Let's start our economic checkup with exports, a subject now very much in the news since President Eisenhower launched a national promotion campaign to sell more goods overseas. An adverse factor in the economy is the continuing deficit in our balance of international payments. The new export drive is designed in part to help correct this situation. The value of exports has climbed from \$16.3 billion last year to an annual rate of \$18 billion so far this year. The drive should help keep up the pace. Sales abroad reward business and make jobs at home.

The initiation of residential housing is a major area where there has been some decline since the middle of last year with a consequent sag in business in this particular segment. This has meant a letup on financial pressures in the mortgage field and has been one of a variety of influences which has resulted in the easier tendency noted today in interest rates.

An evidence of economic muscle is that 64.5 million people had jobs in February—up 1.8 million over last February and at an alltime record for the month. The job total figures were higher than January, even though record snowdrifts and ice kept farmers and construction workers indoors.

By far, the most revealing indication of the economic state of the Union is our recently published report from businessmen on their plans for investment in plant and equipment. They expect to boost capital outlays from \$32.5 billion last year to \$37 billion this year—an increase of \$4.5 billion.

This uptrend in spending means more business for the industries supplying the basic materials and equipment—more employment and more purchasing power which will find reflection in markets generally. This is the sort of economic activity that spells real growth.

One of the broad benefits flowing from capital outlays is the greater and improved technical capacity of plants to turn out a wider choice of better quality products, thus further raising the level of living and adding fresh strength to the economy.

The survey also gives us another set of predictions. In addition to asking businessmen their investment intentions, we also inquire what they estimate in the way of company sales during the year.

The composite answer we received is that major industries anticipate favorable sales

for 1960. Trade companies foresee a 5-percent sales increase over 1959 and manufacturers look forward to an 8-percent rise.

How have we fared so far this year?

The answer is, "Very well."

When in the New Year period the press at various times asked for my opinion on the outlook, I replied that upon appraising the then foreseeable facts I expected the gross national product to reach the record peak of \$500 billion by midyear.

Some scoffed and suggested I was wearing rose-colored glasses. But my forecast is becoming a fact. It is 3 months this side of midyear. And yet the GNP already has reached an annual rate of close to half a trillion dollars, the highest national economic peak in the world and in all history.

The GNP has made a sharp spurt in these 3 months from the year-end 1959 quarter, when total output of goods and services was approximately \$484 billion.

And, remember, the GNP is the most inclusive of all the measurements of the economy.

The substantial rise in output from the last quarter results in part from the removal of the steel-strike shadow, but it also demonstrates a firm foundation of business strength. As compared with early 1959, the current output is 6 percent higher.

Income in this first quarter is moving up along with output—with consumer purchasing power also running some 6 percent better than a year ago. This rise in income has not been fully reflected in retail sales which, thought up, have been curtailed by unusually bad weather in many sections.

You may have read reports that department store total sales have not been doing so well lately. But here again blizzards in some cases even shut down large suburban stores and the blocked roads kept women customers at home. But once the ice and snow melts, increased income is bound to have a favorable impact on consumer purchasing and business sales.

Prices generally are stable and current advances in production and consumption are mainly volume increases valued in constant currency and not in rubber dollars.

Now, let's turn from economic data officially collected by the fact-finding agencies of the Federal Government to the prospect for 1960 as seen by the Nation's outstanding business executives.

How do business leaders themselves size up the situation?

This meeting of the private industry leaders of America's great Middle West gives me the opportunity to share with you the latest expert opinion of the members of the business advisory council, representing a cross-section of the Nation's foremost business executives, who assemble periodically in Washington to give the Secretary of Commerce advice on the business situation.

As heads of great enterprises involving huge investments, mass production and big payrolls, they have access to the best possible fact-gathering resources—far removed from guesses or rumors. As successful heads of giant industries, their judgment has to be tops.

At their regular March meeting last week, the consensus for 1960 was as follows:

The mood: Down-to-earth optimism.

The outlook: Substantial business progress.

The length: All through the year.

Reports of council members added up to a 1960 first quarter well ahead of both a year ago and the 1959 last quarter, with improving sales and income. The consensus was that the announced 14 percent increase in capital outlays over last year—to which I referred earlier—represented firm commitments under steady price conditions.

They reported that severe weather had put a recent crimp in some retail sales, but that buying in stores generally was good. The business leaders were of the opinion that,

with consumer income up some 6 percent over 1959, this gain would be reflected in store sales once spring really gets into business.

The importance of controlling costs was recognized, but the difficulties of such control were stressed.

As executive after executive gave rundowns on the prospect for his specific industry, a unified pattern of progress emerged. None forecast a superheated boom of such proportions as would complicate progress through price instability. But the general expectation was for a better year than 1959—and, remember, last year made an all-time record in prosperity.

After reading unbiased government indicators and hearing the voice of expert business, what's the verdict?

I would sum up the outlook in this short phrase: "Not a boom, but another record."

Let's consider another truth gap of the day—in respect to overall national defense.

Are we now second-rate in military power?

The facts prove otherwise.

The United States is the most powerful nation on earth with the capacity at hand today not only to survive a sneak attack, but also to hit back and destroy a suicide-bomb aggressor.

It is a commendable patriotic attitude for the American people to be very much interested in defense. They have every right to ask searching questions and to insist upon complete factual answers not only from those in authority, but from every other person in or out of Government who sets himself up as an expert on the subject—be he sincere zealot or deplorable scare-monger.

The more truth the American people get on the whole subject, the more firm will be their conviction that the guardianship of peace is still in the strong hands of the greatest economic and military power in the world, the United States of America.

Constructive criticism is wholesome. But the American people are the real losers whenever anyone of prominence carelessly, ignorantly or deliberately uses one piece of the jig saw picture and omits the rest.

For this truth gap might cause uneasiness among our allies and dangerous miscalculations as to our true strength among our foes.

We hear talk from some quarters that President Eisenhower's administration considers a balanced budget more important than national security. Ignorance or infamy could make no more unfair charge.

The same general who successfully led the great crusade that saved civilization from Nazi desolation today is leading a peace crusade to save the world from the unspeakable horror of nuclear war. To him no goal is too daring, no price too high, no sacrifice too great to build an impregnable defense for that peace.

And that is what he has built—despite the irretrievably lost time in long-range missile development he faced in 1953.

Let everyone clearly understand that the Eisenhower administration believes strongly in the importance of intercontinental ballistic missiles—now and in the future. We are rapidly making up for previous neglect.

The former administration obligated \$800,000 for long-range ballistic missile programs in fiscal year 1952. We obligated in fiscal year 1960 \$3.3 billion for IRBM's and ICBM's alone, and for all missile programs about \$7 billion. We are now spending each day 10 times as much as was spent for the entire year in fiscal 1952. And in the fiscal year 1961 budget now before Congress we are recommending \$3.4 billion for IRBM's and ICBM's and a total of about \$7 billion for all missile programs. We're building an ever-increasing long-range ballistic capability for the future.

The critics of military policy, for the most part, center their fire on one single segment,

the intercontinental ballistic missile, overlooking everything else in our diversified arsenal of defense—a balanced capability which I will describe in a moment.

They say that our salvation depends entirely on matching the Soviet Union in this one category. Our chief military and scientific advisors disagree strongly with that shortsighted argument and have experience and logic to back up their case.

You will remember the tragic lesson of recent history. The brave French put their eggs in one basket. They concentrated their defense almost entirely in what they sincerely believed was the ultimate, all-powerful single defense system, the Maginot line, and neglected other fully as vital branches.

In contrast, their enemy had a balanced military system of great strength, variety and dispersion. The Maginot line was not enough—and gallant France went down in defeat. We don't intend to be trapped that way.

We do have missiles—many kinds—but unlike the Soviet Union we have not been forced because of geography and other factors to rely primarily on a single weapons system—the ICBM. The long-range missile may be the best weapon capable of maximum use by the Soviet Union—not so with us. Since it is against our principles to launch a surprise war, we will not try to get a sneak jump on an enemy. Therefore, although we have missiles on the alert they are diversified and not restricted to the intercontinental type.

Some Atlas missiles are on the firing line right now, but how often do you hear of our intermediate range missiles? Right now the allied forces in the United Kingdom are equipped with 60 IRBM's, each with a nuclear punch many times more powerful than the first atomic bomb. These missiles carry a big payload and give us a deterrent capability almost equal to that provided by missiles launched from this hemisphere. What about the Snark, Regulus, Matador, Mace, and other missiles in our arsenal, any one of which can deliver nuclear havoc, all formidable weapons, but still not our first line of defense. We must rely more on manned bombers and other means for the bulk of our protection and the extent of our retaliatory power.

Our strategic striking forces include over 2,000 long-range bombers, greatly outnumbering their Soviet opposite numbers. The force is highly trained, fully equipped, many on 15-minute ground alert, with some actually airborne all the time.

A B-52 can attack several targets, not one to which a missile is limited, and can load up for successive attacks. Each of our bombers can deliver nuclear blows many times the destructive power of an ICBM. A large number of these bombers are deployed at our worldwide bases within close range of potential targets.

We have 14 aircraft carriers—difficult targets because they can move—whose planes could hit about every area of the world with nuclear bombs many times more destructive than those used in the last war.

The Soviets, no doubt, are not standing still. Neither are we. We are ahead now and plan to stay ahead. We're adding this year two atomic-powered submarines with more to follow and each to be equipped with 16 Polaris missiles.

By 1963 we'll have 13 Atlas ICBM squadrons and others with the Minuteman ICBM. Our B-52 bombers will soon be equipped with Hound Dog missiles, enabling the bomber to reach heavily defended targets by softening up the air defense system with nuclear blasts from several hundred miles out. The first ballistic missile early warning system becomes operational this year, making it almost impossible for a mass attack of enemy missiles to reach here undetected.

Added soon to our already massive forces will be a whole arsenal of supermodern missiles and many other weapons.

One final point sometimes raised by earnest questioners: "Is the President so preoccupied with other weighty matters that he does not give enough attention to study and action on defense?"

This great career soldier did everything necessary to win the last war. Do you really think he now would neglect the same effort to win the peace?

His is the final decision on our massive balanced defense policy. But he has the advice of the Nation's best informed and best qualified authorities with widest experience in the entire subject, including the Secretary of Defense, the Joint Chiefs of Staff, and other great military and scientific authorities and intelligence experts.

As of yesterday, the President has presided at 296 out of 326 meetings of the National Security Council, the Nation's topmost policy forum. And he also has daily contact with others with high responsibility in America's safety.

But military competence and command is not the President's only dedication to national security. The greatest war deterrent on earth is the spirit embodied by this sincere man.

He circles the globe—reinforcing the bonds of unity and power of the free world's unnumbered millions—convincing even those behind the Iron Curtain that America always will go "the second mile" for peace with freedom and justice.

Under President Eisenhower's inspiring leadership and without lowering our guard, all-powerful America is using disarmament conferences, summit meetings, and other promising steps in a never-ending effort to replace mankind's dread of nuclear disaster with a strong, fresh hope of universal good will and lasting peace.

Progress U.S.A.—Fairfield County, Conn., Growing Industrial Areas Outstrip U.S. Gains—No. 4

EXTENSION OF REMARKS OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. IRWIN. Mr. Speaker, I would like to introduce the fourth and last of a series of insertions in the RECORD on the general subject of "Progress U.S.A.—Fairfield County, Conn."

I have introduced these remarks to bring to the attention of Congress a profile of the great district I represent, a district in which I have tremendous pride.

Fairfield County, Mr. Speaker, is not an ordinary county, I assure you.

It is a very diversified area, the diversity of which is highlighted and emphasized by these statistics:

Fairfield County has some 632,000 people living in 214,000 homes, having annual incomes of \$1,604 million and spending \$961 million.

It has 1,315 plants employing 103,000 people with payrolls of \$543 million and

turning out \$925 million worth of goods annually.

It has 180,000 families owning 287,013 automobiles and paying a \$266 million annual food bill and with 35 percent of the wage earners making more than \$7,000 a year.

In concluding these remarks about "Progress U.S.A.—Fairfield County, Conn.," I would like to introduce the following excerpts from the economic newsletter and fact sheet on the growth and development of Fairfield County as prepared and distributed by the Fairfield County Trust Co. in its February-March issue:

THE MOVING CENTER—GROWING INDUSTRIAL AREAS OUTSTRIP U.S. GAINS

Fairfield County industry is rapidly changing its center. From a one-time hub of metals and durables in coastal Bridgeport, it's been spreading south and inland.

The switch to trucks and good roads have spurred the growth of the Danbury area, for instance, where employment has jumped 47 percent since 1947. The county gain was 14 percent meanwhile. Jobholders in the Norwalk area number 50 percent more now, with Stamford's gain about half that.

Close after World War II, Bridgeport accounted for two-thirds of all manufacturing jobs in the county. Gains in the three newer growth areas—Stamford, Norwalk, Danbury—have cut that to 57 percent now.

In fact, since 1947 these three regions together have outstripped the Nation in manufacturing job increases—16 percent against 6 percent. In the last 5 years, expansion has been even more dramatic, up 11 percent, compared to 1 percent for the United States.

At the same time, the employment "mix"—the different kinds of industry in the county—has changed greatly. Danbury, for example, known mainly for hats, now turns out a wide variety of goods including plastics, scientific instruments, ladies' handbags, magnetic tape, pencils, ball bearings, electronic devices, and furniture.

The inland country has proved choice terrain for research centers. Two-fifths of the State's 358 are in the county, employing 27 percent of Connecticut's 12,000 scientists and technicians.

And with the tremendous rise in suburban living have come the service, retail and construction trades boom: Carpenters, waiters, barbers, sales clerks, insurance agents, advertising executives, research scientists, TV repairmen, masons, floor waxers, baby sitters and bark tellers.

This has been true generally for the Nation. In this era of greater machine productivity, more people are doing things for each other, less people are needed to make things. But in Fairfield County, the gains in the non-manufacturing job area have been much heavier since 1947: Up about 40 percent against 27 percent for the Nation. The better life has really taken hold.

The county manufacturing pattern is still in a state of transition. As the center moves away from Bridgeport, most observers see the Danbury and north county area as fertile ground for growing plants. Anticipating the move, the State is building a north-county east-west expressway and two north-south routes connecting the Connecticut Turnpike and Merritt Parkway.

Up and over. By 1965, Fairfield County incomes should reach \$2.3 billion, according to Sales Management magazine. Sales are expected to hit \$1.4 billion. This means incomes will swell by \$700 million and sales by \$400 million. These gains are one-third higher than those projected for the Nation as a whole.

Fairfield County: Income and retail sales, 1958 and 1965

	Income		Retail sales	
	1958	1965 (forecast)	1958	1965 (forecast)
Fairfield County.....	Billions \$1.6	Billions \$2.3	Billions \$1.0	Billions \$1.4

Liquid, Solid, and Prepackaged Rocket- Propulsion Systems

EXTENSION OF REMARKS

OF

HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, March 31, 1960

Mr. BENNETT. Mr. President, those of us who are laymen have been very much confused during the past year by the discussion of the relative merits of solid, liquid and prepackaged rocket-propulsion systems. The advantages and disadvantages of each, of course, are somewhat technical, but for those of us in Congress who are necessarily concerned with the missile program, this is a fundamental and important question.

Because of the interest that many Members of Congress will have in this subject, I ask unanimous consent to have printed in the Appendix of the RECORD a brief article by V. H. Bryce Wilhite, director of technical operations of Thiokol Chemical Corp., which was prepared for Space Business Daily, explaining the place each of the propulsion systems has in our missile arsenal.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

LIQUID, SOLID, STORABLE?—THERE'S ROOM FOR ALL THREE

(By V. H. Bryce Wilhite, director, technical operations, Thiokol Chemical Corp.)

Pressures and publicity resulting from the missile gap (sic) have produced an unwise and unwelcome byproduct—the indiscriminate comparison of solid, liquid, and prepackaged propulsion systems.

This is unwise because there is obviously room for all three. It is unwelcome because it forces systems less suited to a particular mission to compete with systems better suited to that mission, with the result that effort and dollars are expended in areas of competition rather than to perfect each particular propulsion unit for its best use.

For example, higher thrusts, lower costs, longer storage life, and the logistic savings

resulting from onsite continuous propellant processing indicate an obvious advantage for large solids as boosters. Prepackaged liquids, because of their higher specific impulse and their ability to yield a finer degree of velocity control at cutoff than the solids, seem best suited for use as upper-stage boosters. On-site loaded liquids appear most feasible for orbital transfer and landings, since they permit thrust variation and start-stop-restart action.

Perhaps this can be best understood if we survey a vehicle designed for a manned round trip to the moon. We will assume that the problems associated with sustaining life in space and selecting a pattern for a soft moon landing have been solved.

At least two large solid-propellant boosters are required, one for initial launch and another for the take off from the moon. We will place these as the first and fourth stages of our 5- or 5½-stage vehicle.

The second-stage unit will be a prepackaged liquid engine capable of increasing vehicle velocity to the magnitude of 15,000 feet per second. This propulsion type is indicated because of its impulse advantage and its longer action time, when compared with a solid, and its logistic advantage over the onsite loaded liquid-propellant propulsion unit.

The third-stage propulsion unit would be an onsite loaded hyperbolic liquid-propellant engine with a variable thrust design similar to that used in the XLR-99 which powers the X-15. This unit would accelerate the vehicle to its required escape velocity, shut down, and then be restarted to effect the moon landing. Its variable thrust would permit better control for optimum intercept with the moon's orbit.

Assuming all fuel from the third stage is expended in flight and during landing, and accepting the danger that the third-stage engine may be damaged when landing, a fourth-stage solid-propellant booster would be used for the moon launch.

The fifth-stage propulsion unit would be similar to the third-stage engine. The versatility of this unit would permit a retro-rocket reentry and landing, or the use of a slip-glide reentry path followed by capsule release for either a glide landing or ballistic reentry.

Although clusters may seem a possible thrust solution for stages 1, 2, or 4, they, like segmented solids, have been dismissed because of added weight and lower reliability factors.

The design of this moon-exploration vehicle is possible within our present technology. However, it demands the concentration of design effort to adapt each propulsion source for its specific mission.

This can be done.

This should be done to save time and costs, close the space gap (sic), and take fullest advantage of our present rocket technology.

St. Patrick's Day Sermon by the Very Reverend Father Robert J. Slavin

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a sermon delivered at St. Patrick's Church, Washington, D.C., by the Very Reverend Father Robert J. Slavin, O.P., S.T.D., president of Providence

College, Providence, R.I., on the occasion of solemn pontifical Mass celebrated on St. Patrick's Day by His Excellency the Most Reverend Patrick A. O'Boyle, D.D., archbishop of Washington, and presided at by the Most Reverend Egidio Vagnozzi, apostolic delegate to the United States.

As Father Slavin well said in his sermon, "May we ever carry in our lives the fighting spirit of St. Patrick."

The sermon follows:

"The memory of him shall not depart, and his name shall be in honor from generation unto generation."—Ecclesiasticus 39: 13.

May it please Your Excellency, the Most Reverend Apostolic Delegate; Your Excellency, the Most Reverend Archbishop; Your Excellencies, Bishop McNamara and Bishop Hannan; Right Reverend and Very Reverend Monsignori; Very Reverend and Reverend Fathers, devoted Sisters; Mr. Justice Brennan; the Honorable Majority Leader of the U.S. House of Representatives and his wife, Mr. and Mrs. John W. McCormack; representatives of Government; members of the Ancient Order of Hibernians; beloved of the Faithful; friends of St. Patrick.

God is wonderful in His saints. How fitting it is to make this reflection in extolling the strength and glory of one of the greatest noblemen of the human race—one of God's own patricians, St. Patrick, apostle of the Irish and father of a progeny of saints countless as the stars of heaven. On a day such as this, well might we pause to catch some of the inspiration of Patrick, who with courage and faith fought to bring the peace of Christ into the hearts of men and women.

Patrick has been compared to Abraham—who left his father's house and the land of his people and passed into the land which God would show him to become the father of faithful people.

Patrick has been compared to Jacob—who wrestled with God through prayers and penances to secure blessings for his people.

Patrick has been compared to Joseph—destined by God to save Egypt and to become the savior of his people. Patrick, too, was a captive, persecuted like Joseph, yet raised a heathen people from their paganism, fed them the words of life and made them a great Catholic nation.

Patrick has been compared to the Apostle of the Gentiles—who became all things for all men to win souls for Christ.

In the course of history, Roman civilization was turned over to the ravaging Goths. Hordes of barbarians conquered and established themselves throughout Europe. When Christianity converted these barbarian peoples, the real inner life of the spirit became known. The Christian religion gave to them a power that lifted them up from their pagan past. These refinements while brought about by the grace of God were accomplished through the instrumentality of His church. In the life of the church history attests that at the beginning of these great nations there was present a missionary who brought the teachings of Christ and enlightenment to souls ready and willing to receive them. Pre-eminent among these spiritual warriors we find St. Patrick. He came into Celtic society and established a lasting spiritual empire. As a man of deep faith and complete confidence in God, he had at the same time a brotherly love for these people. He implanted a devotion to God which even today permeates unnumbered millions throughout the world.

It is said that all good Irishmen love a fight, but in St. Patrick we have not a native son, but one brought to Ireland first as a captive and who later returned to preach Christ to this stouthearted people. Certainly a characteristic note of the Irish before the time of Patrick was the joy of battle for the

sake of battle. Here was a race in whom the passion of daring was outstanding. St. Patrick used these native qualities and refined them so that their fighting spirit turned into apostolic zeal for the faith. He fought not with a chip on his shoulder but with the wood of the cross in his arms. He was assured of being crowned victorious for the cross of Christ will never be defeated.

Patrick was not a fanatical, radical leader nor was he callous to the needs of his people. He was a normal red-blooded fighter, who left behind him a gold-flecked path that should be an inspiration to our world. He was on fire with the zeal of God—12 times taken captive—once sentenced to death. In the face of these trials he was no coward because where the rights of God were concerned the issue was clear. When betrayed by his closest friend, he journeyed to Rome not to vindicate himself but the church in Ireland.

It was this characteristic as a fighter which brought peace to his heart. But how could there be peace when he was fighting enemies? Let us look at Christ. He came into the world as the Prince of Peace. Every event of his earthly life from the silent hour when Mary became the living tabernacle of the Most High, until she was a childless mother at the foot of the cross was an attack on the enemy of peace, anarchy. Peace demanded death. What a paradox. Does not peace mean living in harmony with ourselves and with our fellow men? If only Christ had compromised instead of fighting for truth. He would have been spared the agony and struggle of that bitter, horrible death. He would not have had to endure the hatred and malice of those who cried for His blood. Misunderstandings, betrayals, sufferings, fighting against enemies—why these things seem to destroy all possibilities of peace. Yet, these are the very tools with which Christ forged the peace no man can take from us.

How easy it is to misunderstand this peace of Christ. How hard it is to realize that the victory of peace is not something handed over to us without a struggle. It is fatal to imagine that the peace of Christ is the laziness of inaction, the stagnation of cowardice, the surrender of defeat. It was not to weak, spineless men that He addressed words that seem to our age to be filled with calmness and resignation: "My peace I give to you". He knew what was ahead of His followers—He saw the trials, the persecutions, the bloody rivers of hate through which they must walk, and yet He gave His peace to them. What an open rebuke to those who think that peace brings with it a refusal to fight, a weak man's resignation in the face of mounting obstacles. The peace of God is not the peace of selfish men. Men use the word "peace" in their speeches and at times put it into treaties; but all the while in their hearts they cherish anger and hatred. With God it is precisely the contrary. He allows the thunder to roar and the lightning to flash around us, but all the while He, the God who has overcome the world and death itself, is flooding the souls of strong men and women with the peace that no one can take away from them.

We need the strength to fight, and where will we get it? From the same source Patrick did—from Christ. Patrick said: "Be ye followers of me as I also am of Christ". To the kings of Munster, Minster, Ulster, and Connaught, to Brian Barue, King Cormack, and King Carroll, Patrick delivered the challenge of following Christ. He wished to die for Christ, but in a larger and wider sense, he lived for Him.

That same challenge is given to us today. This of course demands real courage on our part. Above all we need a live, vital, throbbing faith in Christ and His Church.

In Christ—Christ came to teach uncommon commonsense. When He filled hungry bodies with food, filled empty hearts with

Joy or healed broken limbs with the unction of His hand, the crowd swarmed about Him. Teaching starved minds was another matter. Today the hard things of Christ meet the same cowardice in the hearts of people. Fearful of the challenge of His doctrine, they hug closer to themselves the ease on which they have staked their all. Again do we need faith in the courage of Christ. Christ's courage derived its heat from the burning coals of the flaming furnace of love in His heart. It was the cry of that love "strong as death" and of that zeal "hard as hell" spoken of by Solomon. He had a job to do—His Father's business—and He would do it until His breath was stifled by His own blood. One incident shows this clearly. Christ was in Galilee which was then ruled by the puppet king set up by Rome. While He was preaching, the Pharisees pretending to be anxious about His personal safety, came to Him and said: "Depart and get Thee hence for Herod has a mind to kill Thee". Oh, what courageous words He hurled at them: "Go and tell that fox that no one takes My life but I lay it down of myself." Go tell that fox—he does not hedge or squirm or compromise; this crowned impostor, this coward and murderer, this tyrant grinding under his heels free children of God; this quivering of another century, scheming to play the Jews against the Romans, is openly challenged by Christ. What a glorious example of courage He gives to those who with weakness and tepidity of soul think they can serve God by being cowards.

His church—our church carries on the traditions of Christ. The church is not always an original speaker for she explains the traditional truths of Christ. The church is not a novel speaker for she delves among doctrines coated with the noble age of 2,000 years. The church is not an emotional speaker for she desires not to excite feelings but to convince the intellect.

The need of today is for a personal devotion to the church. What can one man or one woman do against the ranks of anti-Christians? Patrick was accustomed to speak to his followers: "Moses was one, Elias was one, David was one. We can all be instruments of furthering the work of Christ if we would live Christ in our own lives."

As St. Patrick found paganism in the heart of Ireland, so may we find it in the heart of our country. Love of self, refusal to sacrifice, neglect of God. When the trumpet sounds the alarm, we must fight for our life, for our soul. When we win battles of this kind, we know what Patrick meant when he said: "Eternal life is worth this and much more." We need more for happiness than mere protection from evil. We need a philosophy of life which will motivate us to search for love and peace. What life means, whither, it goes, the simplest answers to the simplest questions—all these stump the thinker without faith and leave him in a state that is thick and dark with fog. A man without faith stands like a puzzled child before a merchant clamoring a thousand wares. The man of faith is not puzzled for above him, as he stands on the bridge of that bark that is Peter and the Church, he sees the dogmas of faith radiant and true; and by them he guides his course knowing the port to which he is going is eternal happiness. From birth to death the strength of Christ flows about him in steady currents. He is united through the Sacraments with the unconquerable Savior, strong with His strength as were those who died bravely for the truth; as Patrick who lived bravely in the face of trials and difficulties that came from the enemies of Christ.

The turning point in the history of Ireland came when on Easter morning, St. Patrick struck two pieces of flint to make a fire with which he burned the pagan idols. A turning point in the history of the world

can take place if people would rub the flint of the rock which is Christ against the flint of stubborn wills and thus start a blaze which would set fire to the idols of materialism and secularism; a blaze that would inflame our hearts to fight for the faith, fight for the truth.

But where did Patrick receive his inspiration to carry on? That Patrick loved Mary, the mother of God, can be seen by the abiding love of the Irish for her. It was Mary who protected Ireland in the battle of the faith. Our country has been dedicated to Mary under the title of the "Immaculate Conception." We have seen the external completion of the noble monument of the national shrine dedicated to Mary Immaculate and are witnessing at the present time the interior decoration of this beautiful tribute to Mary. If we will only place our confidence in her, we may look for protection for ourselves and our country.

In the 28th chapter of Jeremias, we read the story of one citizen of Juda who tried to stir up the people to a revolution. Jeremias in protest to such tactics walked about with a chain of wood hanging around his neck as a sign of submission to authority. In fury, a loud-mouthed and critical citizen tore the chain from his shoulders and snapped it in two. God came to the prophet and said: "Go tell that man that since he has broken the chain of wood, he will be bound with the chain of iron." We have the choice between the yoke of liberty and the iron chain of slavery; the choice between the yoke of virtue and the iron chain of vice; the choice between the yoke of Christ and the iron chain of sin. St. Patrick would tell us which yoke to choose. To carry the yoke of liberty, the yoke of virtue, the yoke of Christ demands more courage and fighting spirit than to be weighed down by the yoke of slavery, the yoke of vice, and the yoke of sin. May we ever carry in our lives the fighting spirit of St. Patrick. We pray this great saint to drive from our country the serpents of evil which attack us. May the great apostle of Ireland make us ever mindful that we are signed by the sign of the most blessed Trinity which he preached under the symbol of the shamrock. May he give us the courage to live and to fight for our faith in God and His Church.

Ignace J. Paderewski: A Worthy Addition to the "Champions of Liberty" Stamp Series

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 31, 1960

Mr. KEATING. Mr. President, the suggestion has been made that the incomparable Ignace J. Paderewski of Poland be included in the "champions of liberty" series of stamps issued by the Post Office Department. I have enthusiastically endorsed this proposal on several occasions to the Postmaster General.

Paderewski's name is legend with all freedom-lovers and is of special significance today because of the subjugation of his noble homeland by the Communists. He symbolizes the finest in Poland's traditions and heritage, and had, of course, close ties with the United States.

Because of my deep conviction that he would make an admirable and fitting addition to the "champions of liberty" series, I have taken this idea up with the Post Office Department a number of times. In his most recent response, Postmaster General Summerfield assured me, on March 18, that careful consideration is being given to the inclusion of this great statesman of the world in the series. I am extremely hopeful a favorable decision will be forthcoming and to that end I intend to continue my active interest in this proposal.

In this connection, I was pleased to receive recently a resolution endorsing this idea from the Polish Falcons of Rochester, N.Y. I ask unanimous consent to have this resolution printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

POLISH FALCONS OF AMERICA, ROCHESTER, N.Y., RESOLUTION

Whereas Ignacy Jan Paderewski was a man of broad and deep vision, who distinguished himself during the 20th century and particularly during World War I, as a champion of freedom; and

Whereas Ignacy Jan Paderewski was an outstanding world personality in the field of music and acknowledged world statesman as evidenced by facts that he was one of the signatories to the Treaty of Versailles and was a delegate to the League of Nations; and

Whereas Ignacy Jan Paderewski, by his untiring efforts on behalf of freedom for all European countries during and after World War I, and by his devotion to the cause of freedom for the country of his birth gave rise to the establishment of the Republic of Poland; and

Whereas during the time Ignacy Jan Paderewski was Premier of Poland, he continued to champion the cause of freedom and democracy believing them to be inseparable; and

Whereas the 100th anniversary of the birth of Ignacy Jan Paderewski occurs on September 8, 1960, and no more appropriate date can be found to honor the memory of this great world personality and truly outstanding champion of liberty and of his many deeds in the struggle of the world for freedom, liberty, and democracy.

Therefore we do hereby earnestly urge that the 100th anniversary of the birth of Ignacy Jan Paderewski be commemorated by the United States of America by the issuance by the Post Office Department thereof 4-cent and 8-cent commemorative stamps on the 6th day of September 1960.

PETER A. MAJEWSKI,

President.

Recapitulation on Foreign Aid Funds Available for Expenditure

EXTENSION OF REMARKS

OF

HON. OTTO E. PASSMAN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CONGRESS OF THE UNITED STATES,

Washington, D.C. April 1, 1960.

DEAR COLLEAGUE: As chairman of the Foreign Operations Subcommittee on Appro-

priations, it has been my practice to prepare an annual verified and simplified recapitulation on foreign aid funds available for expenditure. The current recapitulation is attached hereto.

Many billions of dollars in foreign aid funds are not carried in the mutual security bill. The aggregate not carried in the bill exceeds the amount carried in the bill. Therefore, you may wish to ascertain from the proper agencies the total amount of other aid programs such as grants and loans under seven separate lending institutions not carried in the mutual security bill, the amount available under Public Law 480, oversea military construction, and the billions in accumulated local foreign currencies which may be used.

The total foreign aid cost, including interest on what we have borrowed to give away, now exceeds \$10 billion annually.

Our committee is working against tremendous odds in an endeavor to write a reasonable bill. The pressure and propaganda from many quarters are shocking. The 43,000 employees and 10,000 trainees of the mutual security program scattered in 76 nations of the world; the White House and its prestige; the State Department and its prestige; the Defense Department; scores of large manufacturers who profit from the program; colleges and universities which also profit from the program; church organizations; much of the press and radio; and literally hundreds of other organizations which have been misinformed are whipping it up for more foreign aid. It is indeed amusing to observe departmental witnesses who have spent unlimited time preparing answers to anticipated questions. In a great many instances their replies

sound reasonable, although they are not even good educated guesses as related to facts.

Your committee will continue to resist the unwarranted propaganda and pressure for an excessive amount of foreign aid. Your support of the committee's efforts to bring this grandiose, worldwide spending program under control will be appreciated. With your cooperation, the committee will report a bill that will provide adequate funds, one based on need and not on desire.

The comptroller general has stated that the weakness of the program is too much money, not too little.

Sincerely yours,

OTTO E. PASSMAN,
Member of Congress.

National Student Traffic Safety Program

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, March 31, 1960

Mr. WILLIAMS of New Jersey. Mr. President, within the past few days many legislators here have had the pleasure of greeting participants from the White House Conference on Children and Youth. It has been a very worthwhile experience; we have heard from many persons who have chosen particular areas of interest in matters concerning the young people of this Nation.

I was particularly happy to receive in my office today a young senior from Princeton High School in New Jersey. He is Martin McGuinn, of 23 Shadybrook Lane in Princeton. Mr. McGuinn is the president of a group which, it seems to me, demonstrates how well our high school students respond to challenge, and how seriously they consider problems of concern to the entire Nation.

I ask unanimous consent to have printed in the RECORD this description of the program of the National Student Safety Association. I think that all citizens will be interested in this account. It shows how our young citizens and our experts in national safety can work together on a project for the benefit of all.

There being no objection, the description was ordered to be printed in the RECORD, as follows:

NATIONAL STUDENT TRAFFIC SAFETY PROGRAM

Junior and senior high school groups in all 50 States participated in the 1958-59 national student traffic safety program. Planned as a service of the National Education Association's national commission on safety education and supported by a grant from the Firestone Tire & Rubber Co., the program is designed to encourage and assist youth to attack the problem of traffic accidents which have taken more lives in their age group than in any other.

Although the individual student groups select their own projects, the program is directed by a business-industry and education advisory committee. Members of this committee are: Mr. Edward D. Burks, administrative assistant, public relations, the Firestone Tire & Rubber Co.; Mr. M. R. Darlington, Jr., managing director, Auto Industries Highway Safety Committee; Dr. Floyd M. Farmer, assistant superintendent in charge of curriculum, Wichita public

Resolution of Texas Office Machine Dealers Association

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the Record I have the honor to submit a resolution adopted recently by the Texas Office Machine Dealers Association in opposition to the 30-percent duty on typewriters which two domestic manufacturers have requested of the U.S. Tariff Commission. The threatened imposition of this restrictive tariff has prompted the adoption of similar resolutions by numerous associations of dealers in typewriters and office machines throughout the United States. The resolution of the Texas Office Machine Dealers, I understand, was the first of these to be adopted.

Mr. Speaker, we hear a great many pious statements about small business being the backbone of the American free enterprise system. But as I know only too well, from my years of experience as chairman of the Select Committee to Conduct a Study and Investigation of the Problems of Small Business, there has been a dearth of action. Indeed, small business is continually engaged in a hard struggle to survive. It is bad enough that we do not do enough to help small business; this least we can do is to take every precaution to avoid aggravating the problems they face and with which they have to contend for their very survival. The resolution and other statements inserted herewith should be given very careful consideration.

The following is a true-extract copy of the minutes of the Texas Office Machine Dealers Association board of directors meeting, held at 9 a.m., January 18, 1960, at the Driskill Hotel, Austin, Tex.

The motion was made by R. C. Brewington, seconded by Tom Bradley, that we adopt the following resolution:

"Whereas a minority of the U.S. typewriter industry has filed a complaint with the U.S. Tariff Commission seeking to restrict imports of typewriters;

"Whereas TOMDA believes its membership and the Nation benefits from a maximum of free competition;

"Whereas the continued growth and development of the independent dealers of office machines depend in large part on the maintenance of satisfactory dealer relationships with manufacturers wherever located;

"Whereas the requested 30-percent duty on imported typewriters, which have been duty free since 1913, would unduly raise prices and restrict consumption;

"Whereas the established policy of our Nation is to encourage a maximum of world trade, in our national interest: Now, therefore, be it

Resolved, That TOMDA opposes the imposition of any tariffs or other restrictions on imports of typewriters;

"That this resolution, duly subscribed, be forwarded to the U.S. Tariff Commission, Washington, D.C.; and

"That copies of this resolution be forwarded to the two U.S. Senators from the State of Texas, to NOMDA, and to counsel for the typewriter importers.

"Dated this 18th day of January 1960. Motion carried with a 12 for, and 1 against vote."

I certify that the above is a true and exact extract copy of the minutes.

TEXAS OFFICE MACHINE DEALERS ASSOCIATION,
C. W. Voss, Secretary-Treasurer.

[From American Surveys]

WASHINGTON, D.C.—Hundreds of small businessmen throughout America are up in arms because of a potential threat to their only dependable source of supply, according to returns in from a nationwide survey conducted among independent typewriter dealers.

The survey was undertaken to gather facts in response to an application filed with the U.S. Tariff Commission by Royal-McBee, and Smith-Corona. These firms, a minority of domestic typewriter manufacturers, are asking for a 30-percent duty to be slapped on imports of foreign typewriters. The case opens here today (Tuesday, March 29). The applicants also ask that minimum duty on any machine be \$10 a unit.

Imported typewriters are sold almost exclusively through independent office machine dealers. At the grassroots level, the dealers—and there are about 5,000 of them—are heavily on the side of the importers, who are responding to this tariff entreaty through the special typewriter importers group of the National Council of American Importers.

Twelve office machine dealers, from a cross-section of U.S. cities, will testify at the hearings. Included in their testimony will be the findings of the nationwide survey. A tabulation of the first 870 responses, from approximately 2,000 received to date to the questionnaire sent out by the importers' group, shows that 78 percent of the dealers report they depend on imported typewriters for 50 percent or more of their typewriter sales. Many dealers say that a duty on imported machines would virtually put them out of the retail typewriter business. They stress that they have been driven out of handling U.S. machines because they cannot compete price-wise with discount houses, which have become an important outlet for American typewriter manufacturers.

Imported typewriters from Europe, the questionnaires indicate, have retail prices that are equal to or slightly higher than the American machines. A stiff tariff would price the foreign typewriter out of competition.

The American importers point out that most new features found in today's typewriters were originated by foreign manufacturers, U.S. makers began to adopt some of these new features only after being forced to become competitive.

In 1953 the imported machines began to rise in popularity and 75,000 units entered this country. They are coming into the United States now at the rate of 450,000 a year. However, it is significant that one-third of today's imports are produced by U.S. manufacturers who have plants abroad. Countries leading in typewriter production abroad are: West Germany, Italy, Switzerland, and Sweden. The Netherlands is also an important typewriter exporter to the United States but its manufacturing facilities

schools, Wichita, Kans.; Dr. Garold D. Holstine, dean, College of Education, University of Nevada; Miss Elizabeth V. Lloyd, executive secretary, Student Cooperative Association of Virginia; Mr. Martin McGuinn, president, National Student Safety Association and student advisor to the advisory committee; Mr. Horace D. Milhorne, the Firestone Tire & Rubber Co.; Mr. Ira Rogers, director of Rural and Education Division, Automotive Safety Foundation; Mr. Lawton K. Smith, director of safety and driver education, Portage Township schools, Portage, Mich., and president, American Driver and Safety Education Association; Dr. Gerald R. Wallace, superintendent of schools, Corvallis, Oreg.; Mr. Ed Williamson, consultant, driver education, Florida State Department of Education; and Mr. Albert Willis, executive secretary, Illinois High School Association.

Eighty-eight high schools received recognition for high-quality safety programs in the 1958-59 national student traffic safety program: 25 received plaques and 63 received certificates. Schools receiving these awards are located in 34 States.

More than 60 different types of traffic-safety projects were undertaken in the 1958-59 program. An additional 40 non-traffic-safety projects were reported. These are listed on the attached yellow sheets. The projects were evaluated by State evaluation panels on the basis of the quality of each school's program in light of its probable influence on the behavior of students and adults in the school community. The projects are examined for the degree to which they reflect student activities which are sound and in agreement with generally accepted purposes of education programs in the schools.

Nearly 1 million students have been enrolled by approximately 1,000 schools in 50 States and the District of Columbia in the 1959-60 national student traffic safety program. Through safety committees of student organizations, driver education classes, teenage safe-driving clubs, and other student groups, boys and girls across the Nation are conducting motor-vehicle safety checks, surveying safety needs of the school and the community, and promoting safer living for all.

In August 1959 the first national student traffic safety conference convened in Kansas City, Mo. One hundred youths, representing each State, attended. These teenagers formed the National Student Safety Association, of which Martin McGuinn, of Princeton, N.J., is the first president. A second conference will be held this summer. The student delegates will be chosen from schools selected by the State evaluation panels as having outstanding safety programs.

In February 1960, the NSTS TIPS & CUES, newsletter for the program, made its debut. It will be published monthly throughout the school year for students. It will contain news of program activities, as well as short notes on what student groups across the Nation are doing to promote safer living.

Because the national student traffic safety program is an ongoing activity, schools throughout the Nation are now enrolling in the 1960-61 program. It is hoped that each year will result in wider acceptance of safety activities as important and integral parts of modern living.

ties are owned by two American producers. The largest is Royal, one of the two American companies pleading for relief from import competition, even though Royal is this country's second largest importer of typewriters.

European manufacturers were the first to seize on color as a means of expanding the market for typewriters. Other features, first introduced in foreign machines, which have found tremendous acceptance among American consumers include: smart styling; spring-loaded keys which take the effort out of typing; light-weight portables; a larger portable keyboard containing more characters; and a painted, rust resistant undercarriage.

In replying to claims made by Royal and Smith-Corona, the importers' group points out that American manufacturers are not losing sales of manual typewriters to European manufacturers. American electric typewriters are fast supplanting manuals for use in offices. The largest manufacturer of electric is International Business Machines, which is not joining in the application for tariff subsidy.

The opposition of America's independent typewriter dealers to the threat of a tariff on imported machines has been underlined in scores of resolutions recently adopted by State and local dealer organizations throughout the country. These resolutions and testimony before the Tariff Commission from representative dealers promise to reflect the serious impact that imposition of the proposed duty would have on American home-town businesses.

[From American Surveys]

FACT SHEET—BACKGROUND INFORMATION ON THE TYPEWRITER CASE BEFORE THE U.S. TARIFF COMMISSION BEGINNING MARCH 29, 1960

PARTICIPANTS IN THE HEARING

Royal-McBee Corp., of Port Chester, N.Y., and Smith-Corona Marchant Inc., of Syracuse, N.Y., are applying to the Commission for an escape-clause investigation under section 7 of the Trade Agreements Extension Act of 1951, as amended. The other U.S. typewriter manufacturers (Remington Rand, Underwood, R. C. Allen, and International Business Machines) have not joined in the application.

The Special Typewriter Importers' Group of the National Council of American Importers is replying to the application of the domestic manufacturers for tariff relief.

Independent office machine dealers throughout the United States have shown unusual interest in this hearing—since imported machines now form the bulk of their typewriter retail business. Twelve dealers from a cross-section of American cities and one importer will testify, protesting the tariff request.

TYPE OF HEARING

Conducted under provisions of section 7 of the Trade Agreements Extension Act of 1951, as amended, commonly known as the Escape Clause. It provides for the imposition of duties and/or quotas if actual or threatened serious injury to domestic industry is found to exist due to increases in imports as a result of tariff concessions granted under the reciprocal trade agreements program. The Tariff Commission makes the investigation and the President makes the final determination.

APPEAL FOR TARIFF SUBSIDY

Royal-McBee and Smith-Corona are asking that a duty of 30 percent be imposed on imported typewriters which have been duty-free since 1913. They are not requesting any change in the duty on parts.

AMERICAN OWNED PRODUCTION

From 1947 to 1957 U.S. typewriter production fluctuated between 1 million and 1.6 million units, with many ups and downs.

In 1958, largely as a result of the U.S. recession, the output dropped to 1.2 million units. In 1959 it inched up to nearly 1.3 million.

During this period, however, American companies transferred portions of their production capacities into foreign countries. These subsidiary plants—outside the U.S.—today produce approximately 600,000 units a year. When this foreign capacity is added to domestic capacity of U.S. plants, it is clear that American firms still control 50 percent of the world's production of typewriters.

ONE-THIRD OF IMPORTS INTO UNITED STATES ARE AMERICAN BRANDS

Of the approximately 450,000 imported typewriters which came into the United States in 1959, one-third are imports of U.S. brands produced abroad. These came mostly from the Netherlands, Great Britain, and Canada.

AMERICAN ELECTRICS REPLACING AMERICAN MANUALS

The importers' group points out that the sale of American-produced manual typewriters has dropped primarily because electric typewriters are replacing manuals. IBM's domination of the electric machine market has cut sharply into the business of old-name typewriter manufacturers. Imports are not a factor in the electric typewriter business.

IMPORTS ARE EQUAL OR SLIGHTLY HIGHER IN PRICE THAN U.S. MAKES

European typewriters are not cheaper than American-made products. Their retail prices are usually slightly higher than American-made machines. These typewriters come largely from West Germany, Italy, Switzerland, and Sweden.

CONSUMER BENEFITS FROM IMPORTS

The importers' group maintains that the American consumer has benefited from foreign competition in the typewriter business. Typewriters originated abroad have been first with many new features including: color; light-weight portables; spring-loaded keys which take the effort out of typing; and a larger portable keyboard with more characters. American makers adopted some of these features only when forced by competition to do so.

Students, homemakers and other women, and business men who travel a great deal have been especially receptive to the European portables. Since most foreign makers do not advertise, the widespread acceptance of the imports can only be attributed to the improved design and function of the machines.

INDEPENDENT U.S. DEALERS PROTEST TARIFF PROPOSAL

Imported typewriters are sold almost exclusively through independent dealers throughout the United States. A tabulation of the first 870 questionnaires, from some 2,000 received in response to a nationwide survey of the dealers, shows that 78 percent of the dealers depend on imported typewriters for 50 percent or more of their typewriter sales; 80 percent of the dealers report that the retail price of imports is equal to or higher than domestic machines; 82 percent claim that the imports require less service than American makes; 82 percent claim that the imported machines are of better quality than the American typewriters.

The survey was conducted by the Special Typewriter Importers' Group.

TWELVE INDEPENDENT DEALERS TO TESTIFY IN BEHALF OF IMPORTS

A number of resolutions have been passed by U.S. regional groups of office machine dealers protesting the proposed duty on imports. Many dealers say that a duty on imports would virtually put them out of the retail typewriter business. Because of dis-

count houses, mail order houses and other cutrate firms, which have become significant outlets for American typewriters, the dealers can no longer sell the American makes at a profit. Twelve independent dealers from a cross-section of U.S. cities will testify in behalf of the importers' group.

AVERAGED SALES FIGURES OF AMERICAN MANUFACTURERS CONTINUE TO RISE

According to U.S. Department of Commerce statistics, sales of U.S.-produced typewriters have been:

U.S. sales of typewriters

[In thousands of units]

	1948-50	1951-53	1954-56	1957-59
Portables....	488.7	588.0	508.7	740.0
Manual.....	464.4	527.3	429.6	361.2
Electric.....	44.8	80.3	148.8	212.0
Total.....	997.9	1,174.0	1,180.3	1,313.7

* The totals include some specialized typewriters not tabulated in the breakdown above.

BEGINNINGS OF THE TYPEWRITER

It is difficult for any one country to lay claim to the invention of the typewriter. British Patent Office records show that a machine fitting the description of a typewriter was patented as early as 1714. Henry Mill, an English engineer, was the inventor. The first American patent relative to the typewriter was granted to William Austin Burt of Detroit, in 1829. In 1867 Christopher Latham Sholes of Milwaukee perfected the first practical typewriter.

As Old as Our Fears

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, March 31, 1960

Mr. WILLIAMS of New Jersey. Mr. President, interest in the problems of the aging and the aged has increased with great speed in recent months, and particularly in the weeks since a Senate subcommittee issued its landmark report on that subject.

In New Jersey recently, Dr. David B. Allman, a former president of the American Medical Association, discussed this social question and made a proposal of interest to all Americans.

A new story in the March 16 issue of the Atlantic City (N.J.) Press describes Dr. Allman's address.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DR. ALLMAN PROPOSES PROVIDING JOBS FOR THOSE OVER 65 YEARS

A nationwide movement to reemploy persons over 65 years old was proposed by Dr. David B. Allman yesterday. Speaking at a Rotary Club meeting in Hackney's Restaurant, the resort doctor, a past president of the American Medical Association, said the Nation is discarding quantity as well as quality by not putting persons over 65 back to work.

He said there are many thousands today who would be helped if they were put back

to work and in turn they would help the economy of the country.

A person has a right to be useful, as much as a right as to vote, the doctor noted, adding that many persons over 65 are better workers than some younger people. "We are as young as our self-confidence and as old as our fears," he remarked.

INCREASE RAPIDLY

There are many interested in the problems of the aged, "senior citizens," he said. He pointed out that in 1900 about 4 percent of the population was over 65. Today there are 16 million persons, about 8 percent of the population, over 65. By 1975 it is estimated there will be 25 million, about 12 percent, in the senior citizen bracket.

About 6,000 persons each day reach 65, the doctor noted. The senior citizens, plus infants, teenagers, and others, comprise a tremendous nonproductive group, he commented. The doctor questioned whether a rapidly expanding nation such as ours can support such a large number of nonproductive persons.

The vast majority of senior citizens want something to do, he said. Dr. Allman also remarked that he believes it is an unnecessary tax burden to support persons over 65, adding that it is estimated within 10 years employers will be paying as much in social security tax as they now pay in income tax.

"I believe every person able, willing, and fit should be put back to work—not only for their sake, but for the sake of the country," he remarked.

DIRECTORS NOMINATED

Vernon F. Stanton, president, directed the meeting. Two new members, Charles Tallman and John Lyons, were inducted by Arthur Broll.

Fourteen members were nominated for posts as directors. Seven will be elected at Tuesday's meeting. Nominated were George E. Fieldhouse, Frank L. Kearns, Bernard H. Strouse, John W. McNally, Frank H. McCue, Harry C. Moore, Jr., James H. Ennis, Joseph W. Hamilton, Frank A. Giordano, Frank P. Sanders, L. Edison Mathis, Jr., Jud L. Carey, John S. Adams, and Raymond L. O'Keefe, Jr.

Delegate Farley

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the March 24, 1960, issue of the Watertown Times:

DELEGATE FARLEY

Political history in New York State seems to have come full circle with the news that Jim Farley is back in politics again. In terms of the position the former Democratic national chairman will seek, he is barely getting his feet wet, but the circumstances in which he finds himself may lead him into much deeper water in a short time.

James Aloysius Farley has had no major political role for so long that almost a generation has gone by since he stepped down from the commanding position he held in both the State and national Democratic organizations. Perhaps quite unfamiliar to a throng of young adults, he has never been forgotten by those of either of the principal political persuasions who used to follow his

vigorous and wonderfully happy approach to the business of politics.

Now, at 71, he has agreed to run for Democratic convention delegate in Manhattan's 17th Congressional District, averting the likelihood of a bitter election year primary fight by permitting both the DeSapio-Tammany regulars and the Roosevelt-Lehman-Finletter reform group to unite in asking him to run. He replaces the regular organization choice, Henry Silverman, whom the insurgent reform group has challenged, and will join the reform group's Thomas K. Finletter, former Air Force Secretary, in representing the key New York City district at Los Angeles.

It will be the 10th National Democratic Convention for Mr. Farley, whose return to the arena each time evokes recollections of him as the 1932 convention's kingmaker. He directed the drive for Franklin D. Roosevelt's nomination then in the same way he had practiced politics since his start in the field in 1912. Carefully and thoroughly cultivated friendships from top to bottom, and utterly thorough groundwork as floor leader of the Roosevelt organization brought off the victory.

His management of the party in the State and Nation continued until his break with Roosevelt over the third term in 1940, when he left the national chairmanship and his cabinet post of Postmaster General. He held the State chairmanship until 1944, although he did not continue his unbroken political successes through all that time.

The periodic reappearance of Farley on the political scene, the political operator whose reputation for honest dealing and dependability has left him unscarred by the usual train of enemies, is refreshing. What may happen now in that Democratic battleground, New York's 17th District, and elsewhere in the State could also be interesting.

Golden Idaho: A Panhandle State

EXTENSION OF REMARKS

OF

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, March 31, 1960

Mr. CHURCH. Mr. President, for many years Mrs. Elta M. Arnold of Grangeville, Idaho, was the superintendent of schools of Idaho County. Idaho County is the largest county of the State of Idaho in area, extending from Oregon and Hells Canyon on the west to the Bitterroots and Montana on the east. Idaho County is almost as large in total area as the State of Massachusetts. Mrs. Arnold visited the county schools in the early days of our school system by horseback when the trip could not be made in a day.

In her later years she has remained active, and she now has a weekly radio program over station KORT at Grangeville, Idaho. In this program she expresses her own positive opinions and she edifies the people of the area with her encyclopedic knowledge of and great love for Idaho's history.

I ask unanimous consent that a recent script she used, having to do with the early history of Idaho, be printed in the Appendix of the RECORD.

There being no objection, the script was ordered to be printed in the RECORD, as follows:

GOLDEN IDAHO: A PANHANDLE STATE

(By Elta M. Arnold)

"O, the mountains in the morning,
When the thin blue smoke is rising!

O, the peaks beyond the pine trees,
Where the snows lie white forever!

O, the pleasant upland meadows,
Where the camas flower blossoms!

O, the timbered drinking places,
Where the deer trails come together!"

This poetic description of Golden Idaho by Talbot Jennings, an Idaho poet, is both fitting and profound and is appropriately adapted to the long past or present interim.

Idaho, the Redman's "Ee-dah-how" meaning "The Light Coming Down the Mountains," was birthed March 3, 1863; when President Abraham Lincoln, willingly and gladly, signed the Territorial Organic Act, which later became the basis of Idaho's constitution. He had long been interested in the Oregon Territory and had been strongly tempted to accept her governorship when it was offered him by President Zachary Taylor. But fate, unknown to the world, had marked him for a greater task—that of emancipating the southern slaves.

Idaho was a part of the vast Oregon Territory and when Oregon assumed her present boundaries, Idaho became a part of the Washington Territory. Four years later, she was created a Territory in her own right with an area exceeding that of Texas, since it included both Montana and Wyoming.

All Territories were blocked out in Washington, D.C., and the Surveyor General was directed to make them rectangular according to parallels of latitude and longitude, as far as could be done, conveniently, but to follow landmarks of mountains and rivers wherever possible. This was done on Idaho's western boundary, where the Snake River had been followed as long as it kept a northerly course. Idaho's southern boundary had long been established on the 42d parallel of latitude which is an extension of the southern boundary of Oregon.

The surveyors were instructed to begin where parallel 111 crossed the southern boundary and survey north to the Canadian line, thus, making Idaho rectangular like her sister States. They began as directed and continued north until they had almost reached the northwest corner of Wyoming when they veered west and followed the crest of the Bitterroot Mountains instead of continuing due north. This was the "Big Blunder" that made Idaho a panhandle State.

When they had followed the Bitterroot Mountains for about 300 miles they notified the Surveyor General that if they continued they would come to a sharp point before they reached the Canadian line. Communications were slow. At last they received instructions to strike due north from wherever they were. They did so. Thus, the panhandle, which is only 50 miles wide instead of 300 miles.

This survey was made in 1868, after the rich gold mines of Alder Gulch and Helena had been discovered. It has been hinted that the surveyors visited a leading mining town of Montana and were induced by the citizenry to follow a mountain divide instead of keeping the northerly direction, thus, giving Montana—which had become a territory 4 years earlier with Bannack City the capital—some of the richest gold mines in the world. Also the mining officials may have known of Montana's silver prospects which came into production soon after. Both the gold and silver mines, but for the "Big Blunder" would have been in Idaho as would the town of Butte—which is located on the richest copper hill in the world.

The following story illustrates Idaho's territorial changes: A family of three children

were born in the same log cabin, which was never moved. Each child was born in a different State, rather a different territory. The first, a boy Charles White, was born in the Oregon Territory before Idaho was taken from it. The second, a girl Lillian, was born in Idaho Territory just before Montana was taken from it. The third child was born in Montana. This cabin stood in Old Hell Gate, near Missoula, Mont.

You may be surprised to know that there were plenty of politicians in these new territories—many of vehement desire. Civil War debates, especially on States' rights, waged everywhere and often ended in knifings and killings.

Several of the territories wanted to break away from the Union and set up new republics. In 1855, because of strong opposition to slavery there was a rumor of a Pacific Republic, with 10 States, including all the territory west of the Rockies. It lost force because of slow communication. The second rumor was squelched before it gained headway. The third was silenced by the Civil War.

A bill to annex the 10 northern counties of Idaho to the Territory of Washington passed Congress. President Cleveland killed it with a pocket veto. The Governor of Idaho, who realized the great need of north Idaho taxes and also feared that the southern part of the State would be annexed to Nevada, wired him that public opinion in north Idaho had changed. This was, perhaps, the biggest prevarication that Idaho has ever known.

During her first territorial years Idaho covered 326,000 square miles, the largest territory with the exception of the new State of Alaska, that the United States has ever known. It now covers approximately 84,313 square miles and was the 43d State admitted to the Union. Its capital is Boise. It is divided into 44 counties and is the only State in the Union that is bordered by six sister States and a foreign country.

Idaho was explored by those two dauntless captains of destiny: Capt. Meriwether Lewis or Long Knife and Capt. William Clark or Redhead, whose explorations gave to the United States the second or clinching claim to the Oregon Territory. This heroic expedition spent several weeks within our boundary and knew Idaho, as it will always be known—"The Gem of the Mountains."

Idaho is still an empire; larger than all the New England States combined. An empire whose foundation was gold, silver and lead; whose desert was transformed into a garden by the magic of irrigation; whose great dams stay the overflow of her rivers; whose 10,000 miles of canals distribute her rushing waters over more than 5 million acres of reclaimed areas.

Historian Bancroft wrote of Idaho: "Taken altogether it is the most wonderful, romantic, mysterious part of the domain enclosed within the Federal Union."

Idaho speaking: "I was born to the purple with a golden spoon in my mouth, on March 3, 1863. President Lincoln was my Godfather. In the House of Representatives I was called Montana, but in the Senate I was christened Idaho."

I am one of the Liberty States for I reached my majority July 3, 1890, when I was admitted to the congressional family and given the right to vote on the laws of the land.

My golden key to the future is conservation of my natural resources: soil, minerals, forests, waters, and wildlife.

My greatest loss was a Federal dam in Hells Canyon.

My goal—raise more potatoes than the State of Maine.

Kullo. ("That is all" in Nez Perce.)

Pawnshops Waiting for Sunrise

EXTENSION OF REMARKS

OF

HON. OTTO E. PASSMAN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Pawnshops Waiting for Sunrise":

PAWNSHOPS WAITING FOR SUNRISE

(By Frank C. Porter)

"I'm proud of my business," says Jerry Livingston, known far and wide as the dean of Washington pawnbrokers. "After all, if it weren't for us, Columbus would never have discovered America. He had to pawn Queen Isabella's jewels to buy his ships."

The term pawnshop—long the butt of burlesque comedians and associated in the minds of the uppercrust with penury—doesn't phase Jerry. In the Dictionary of the American Language, Henry L. Mencken found that our nice nellyism had transformed almost all pawnshops into "loan offices." But to Livingston a pawnshop is still a pawnshop.

His pride is shared by his competitors—there are some 10 legal pawnbroker establishments in the District with an annual volume of \$1.6 million in pledges—but they find this pride under continual strain. For one thing, most of them were practically in hock themselves a year ago; every licensed shop in the District went into the red in 1958 except Livingston & Co. For another, they complain of being wallflowers as far as the public is concerned.

"They don't even know we exist," says Murray Levine, who runs Capitol Pawnbrokers as a sideline to his real estate business, in a hurt tone of voice.

The public can't be blamed. For years the only legal pawnshop was run by Livingston & Co., owned by Jerry's father, Bernard, in conjunction with its jewelry store. Earlier brokers quit the District to a man after the so-called Loan Shark Act of 1913 reduced the permissible interest rate from 3 to 1 percent a month. Meanwhile many of the city's several hundred secondhand dealers dealt in sub rosa pawnbrokerage (some still do), charging as much as 25 percent a month.

In 1956, as Jerry Livingston puts it, "I had the audacity to go to Congress and get a law." He spent months on the Hill, testifying, arguing, wheedling, cajoling. The bill finally passed with the support of the District of Columbia Commissioners, who argued it would produce revenue, make it easier for residents to obtain immediate small loans and stop unregulated money lending.

The law put pawnbrokers under strict regulation. One provision even permitted police to seize pawned articles they believed stolen even if they lacked positive proof. The annual license fee was put at \$500 compared with \$50 for secondhand dealer permits.

But it provided what Livingston had fought for—a raise in the allowable interest rate from 1 to 2 percent monthly on loans up to \$200 with a minimum interest charge of \$1. The old 1 percent rate continues on loans more than \$200.

The new law brought pawnbrokers back to the District; there were six in business by 1958. But the higher rate wasn't enough to keep them solvent.

Two percent a month—or 12 percent a year—may appear usurious to a layman but to a pawnbroker it's slim pickings. Loans under \$100 comprise 90 percent of his volume. A \$20 loan for 4 months, the term of the usual pawn ticket, will net him only \$1.60 before expenses. Most brokers obtain their capital from banks at a current interest rate of 6 percent annually. Added to this are rent, wages, store overhead, losses from property picked up by police and auction expenses. In Virginia, for instance, pawnshops may charge 10 percent a month on loans up to \$25, 5 percent on loans from \$25 to \$100 and 3 percent on loans greater than \$100.

In the old days, an unlicensed pawnbroker could make out well on unredeemed collateral. A customer, for example, might put up a \$100 watch for a \$25 loan. If he failed to redeem it, the broker might sell it for \$50, assuring him a gross profit of 100 percent.

The present District law requires that all unredeemed articles be put up for public auction after the owner has been notified. The auction is designated to establish title to the article and to protect the customers, according to C. T. Nottingham, District of Columbia superintendent of licenses and permits. If an article brings a price well in excess of the loan on it, the difference between the loan plus interest and the selling price is refunded to the customer, Nottingham explains.

The pawnbroker is permitted to enter an initial bid to protect his interest and he is free to return an article to his shop if there is no higher bid.

Jerry Livingston produces figures to show that the District's six pawnbrokers suffered a collective net loss of \$25,700 in 1958 on gross operating income of \$128,300 and total volume of \$1.6 million. The only one to show a profit was Livingston himself. His firm netted about \$15,000 after taxes on a gross of \$1.1 million (about two-thirds of the city total). It suffered a \$4,000 net loss on public auctions.

Last year the Commissioners recognized the pawnbrokers' plight and raised permissible monthly charges up to 3 percent on loans up to \$100, 2½ percent up to \$200, 2 percent up to \$500, and 1 percent up to \$1,000. The previous rate of 8 percent annually on amounts above \$1,000 remains.

The pawnbrokers haven't finished totaling up their 1959 books yet but Nottingham, who supervises the industry, says he expects most will break even or possibly show a small profit.

The brokers themselves feel that the key to getting on their feet is expanded volume. Livingston, who has about \$350,000 out in loans at any given time, figures that the breakeven point for the smaller operator is about \$34,000 in outstanding loans.

Levine, who bought the building next to his shop to expand and is renovating it for a total cost of \$60,000, says, "If I don't increase my volume tenfold, I'm wasting my time."

To aid their cause, the operators have formed the Pawnbrokers Association of the District of Columbia with Jerry Livingston as president. The aim is to set up a standard of ethics for themselves, police the industry, advertise collectively, and reduce expenses by possibly hiring their own auctioneer.

Among their better friends is Nottingham, who says he finds the pawnbrokers just about the easiest group to deal with under his supervision. Only one violation of the pawnbrokers law has occurred since it was enacted in 1956, Nottingham testifies. And he feels the brokers perform a useful economic function—loaning to persons who can't get credit elsewhere.

Address by Constant Mierlak at Byelorussian-American Meeting

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 31, 1960

Mr. KEATING. Mr. President, on the occasion of the 42d anniversary of the independence of Byelorussia, an address of commemoration was delivered at a mass meeting on March 27 in New York City by Constant Mierlak, national president of the Byelorussian-American Association.

In view of our richly deserved admiration for the courageous people of Byelorussia, now under the cruel yoke of Communist tyranny, and because of our devotion to the cause of their ultimate liberation, I ask unanimous consent that the address to which I have referred, together with the resolution adopted at the mass meeting, be printed in the Appendix of the RECORD.

There being no objection, the address and resolution were ordered to be printed in the RECORD, as follows:

ADDRESS OF CONSTANT MIERLAK, NATIONAL PRESIDENT OF BYELORUSSIAN-AMERICAN ASSOCIATION AT THE COMMEMORATION OF THE 42d ANNIVERSARY OF BYELORUSSIAN INDEPENDENCE AT THE BILTMORE HOTEL, NEW YORK CITY, ON MARCH 27, 1960

Your Excellencies, distinguished guests, and representatives of friendly nations, ladies and gentlemen, 42 years ago, on March 25, 1918, in Minsk, the capital of Byelorussia, the Executive Council of the Rada (Parliament), which was elected at the All-Byelorussian Congress in December 1917, by its Third Constitutional Act, proclaimed the independence of the Byelorussian Democratic Republic—in the following words:

"... We, the Rada of Byelorussian Democratic Republic, are liberating our country from the last vestige of state dependency ... From now on, the Byelorussian Democratic Republic is proclaimed a free and independent state ..."

This magnificent act in Byelorussian history we gathered today to commemorate and also to pay a tribute to the heroic generation which has already passed. Byelorussians of that generation envisioned a free and independent Byelorussian State.

Only now, a generation later, looking from the political prospects of today, can we understand the significance of this act—and appreciate the determination of Byelorussian statesmen to build democracy on the ruins of the disintegrated imperial Czarist totalitarian regime of Russia—and their courage in defending the freedom and independence of its people from a new men-act, Russian imperialistic communism.

Courage and determination to such an extent do not exist today in the statesmen of the free world, although they have been witnesses to the enslavement of 20 nations in central-eastern Europe and Asia.

The 42d year of Byelorussian independence is full of political paradoxes:

The statesmen and leaders of the United States and Western World, on one hand are helping to gain independence, to build democracy and to defend freedom and human rights in Asia and Africa, and on the other hand they help the Russian communism to fortify their grip on once free and independent nations, already subjugated by brutal

force. The physical and psychological disarmament of the free world, especially America, is implicit in the policy of peaceful co-existence. My implementing and promoting this policy, these statesmen are actually furthering the aims of Communist ideology—world revolution and the dictatorship of the proletariat. They are placing the neck of the free world under the yoke of Communist domination.

For those who have a doubt how the Russians interpret the policy of coexistence I will quote from a statement made by Nikita Khrushchev in Warsaw in April 1955. "We must realize that we cannot coexist eternally, for a long time. One of us must go to his grave. We do not want to go to the grave. They (meaning us Americans) do not want to go to their grave, either. So what can be done? We must push them to their grave."

And we Americans must realize that Khrushchev means business, and he puts in practice what he says.

When Stalin and later on Khrushchev realized that they coexisted pretty long with the Byelorussians, they just pushed them to the grave, with the help of NKVD or MVD. The Soviet census of 1959 reveals that the Byelorussian Soviet Socialist Republic in 20 years lost a population of more than 5,800,000 and at the present time Byelorussia is losing about 400,000 of population yearly due to the Moscow's genocidal extermination policy.

From this single example we see how the Russians extirpate a people in the path of mashing Russian imperialism. The Byelorussian people are one of many others who continuously resisted actively and passively Russification, never recognized the Soviet system imposed upon them by force, and perennially strive for freedom and independence.

We also must realize, that besides pushing to the grave more than 400,000 of Byelorussians yearly, Mr. Khrushchev does the same thing with other nations like the Ukrainians, the Baltic States peoples, Georgians, Armenians, Cossacks, Turkestanis, and more than a dozen others, not omitting the brutal destruction of Hungarian patriots in November 1956. Notwithstanding this, he was invited to the United States and officially was received here as a honorable statesman. Is it not an irony of Providence?

Now, we who experienced the benefits of Soviet system and the advantages of progressive and peoples democracy, and knowing exactly what coexistence means, being conscientious citizens of this great country, we have a sacred duty to raise our voices and point out the dangers America may soon run into. We must do everything possible to prevent this country from meeting that disaster, from which our old country could not escape.

It is also our duty, in this year of Byelorussian independence to call attention to a very important action taken by the U.S. Congress and the President. The U.S. Congress in its joint resolution (Public Law 86-90) provided for the designation of the third week of July as Captive Nations Week, and for the first time officially uttered truths about Russian Communist imperialism. This law stated that "The enslavement of a substantial part of the world's population by Communist imperialism makes a mockery of the idea of peaceful coexistence between nations and constitutes a detriment to the natural bonds of understanding between the peoples of the United States and other peoples," and further on it says:

"It is vital to the national security of the United States that the desire for liberty and independence on the part of the peoples of these conquered nations should be steadfastly kept alive."

The President in his proclamation on Captive Nations Week stated: "It is appropriate and proper to manifest to the peoples

of the captive nations the support of the Government and the people of the United States of America for their just aspirations for freedom and national independence," and further on Mr. President says: "I invite the people of the United States of America to observe such week with appropriate ceremonies and activities and I urge them to study the plight of the Soviet-dominated nations and to recommit themselves to the support of the just aspirations of the peoples of those captive nations."

These are really two great documents of which the Americans should be always proud, because, these are the principles which make the America great.

We fully support the U.S. Congress and the President on this issue, and we are ready to obey the law in observing it accordingly, and if need be we are also ready to die in defending these principles, because, in defending them, we defend America and the whole humanity from destruction and slavery.

With great regret, but for the benefit of the national security of the United States, I will not fail to point out that many Americans and even some official agencies and private committees ignored the contents of these two dignified documents; moreover, they, in transmitting them to these captive nations, censored and distorted the real meaning of the resolution and proclamation, thus showing their contempt of the President, Congress, and of the principles on which American people stand.

Ladies and gentlemen, by commemorating the 42d anniversary of the declaration of independence of the Byelorussian Democratic Republic we pay our modest tribute to that nation's long and unabating struggle for liberty, and to her enormous sufferings and sacrifices. These 42 years of active and passive resistance to tyranny are a great contribution to the common cause of human freedom; as such it should not pass unnoticed.

We Americans of Byelorussian descent are resolved to support the Byelorussian movement for liberation in every possible way and by all means at our disposal, and thus to help defend this country against Communist penetration and aggression, so help us God.

We strongly believe that truth and justice will ultimately triumph over oppression, that Byelorussia will be free and independent, and will live in peace with other nations. We also believe that this great country, the United States of America, will be preserved by providence forever.

Thank you.

RESOLUTION

(Sponsored by the Byelorussian-American Association, unanimously adopted at the mass meeting commemorating the 42d anniversary of Byelorussian independence on March 27, 1960, at the Biltmore Hotel in New York City.)

Whereas the people of Byelorussia, one of many victims of Communist Russia aggression, have been forcibly deprived of their national sovereignty, their religious, political, social, cultural, and economic liberty, and are now subjected to an inhuman policy of oppression, terror, mass deportations, russification, economic slavery, and colonial exploitation;

Whereas the Soviet 1959 census reveals, Byelorussian S.S.R. in the past 20 years shows a deficit of 5,800,000 of which 2 million are due to the losses suffered in World War II, the rest of 3,800,000 is the direct or indirect result of the planned permanent genocidal policy of Red Russian imperialism with the purpose of exterminating the Byelorussian people;

Whereas the present government of the Byelorussian S.S.R. and its United Nations delegation are not democratically constituted

representatives of the Byelorussian nation, but executors of the will of Russian colonial administration only, will not and cannot, therefore, protect and defend Byelorussian people;

Resolved, That this meeting appeal to the President, Secretary of State, and the Members of the U.S. Congress with the request to do everything possible, to see:

1. That the liberation of Byelorussia and other countries subjugated by Russian communism be included in the program of the American foreign policy and in the negotiations at the summit conference.

2. That the U.S. Government does not enter into any agreement which would condone any past, present, and future Soviet aggressions;

Resolved, That to ask U.S. Representative to the United Nations Hon. Henry Cabot Lodge and all member representatives of the free world nations to bring to the attention of the next General Assembly of the United Nations the fact of mass exterminations of Byelorussian people carried on by the U.S.S.R. Government with Nikita Khrushchev at the head, charging with flagrant violation of the United Nations 1948 Convention on International Crime Genocide, in order to make the U.S.S.R. Government answer for and in order to protect the defenseless Byelorussian people from further extermination.

Resolved, That we shall continue to support the Government of the United States in its effort to achieve a durable peace with freedom and justice for all men and all nations in the world.

Public Health and Traffic Safety

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. ROBERTS. Mr. Speaker, one of the leading authorities on highway safety in the Nation recently presented a very interesting proposal regarding traffic regulations to the National District Attorneys' Association midwinter conference at Miami Beach, Fla., which I wish to call to the attention of Members.

The paper, delivered March 17, 1960, by Mr. Daniel P. Moynihan, director, New York State government research project, Maxwell graduate School of Citizenship and Public Affairs, Syracuse University, is as follows:

The most puzzling, yet revealing, aspect of the traffic safety problem is that it has been with us for so long and we have learned so little about it. The automobile is a mechanical device of the 19th century. It was in common use half a century ago, and has not changed in any essential design feature since that time. Automobile injuries reached epidemic proportions a generation ago. Today, Dr. McFarland at Harvard estimates that during a 15-year period, approximately 10 percent of the population may be killed or injured in a highway accident. Yet our efforts to control the problem are still largely based on a hodgepodge of supposition and inference derived from assumptions we have never verified, which, more significantly, we have never seriously tried to verify.

If one considers the amount of professional inquiry that has been devoted to other fields

of public health such as tuberculosis or poliomyelitis, to other problems of public administration such as social welfare, or to other areas of law enforcements such as parole, it is staggering that we have devoted so little effort to the study of the epidemic on our highways.

The most tenable explanation for this absence of serious inquiry is that our attitude toward traffic safety has in fact been ambivalent. We have and have not wanted anything done about it. A familiar way out of such predicaments is to attack the problem in a manner that ensures minimum results.

If this seems an odd way to behave, it is yet no different from our approach to drinking during prohibition, or to gambling in more recent years. Closer study would probably reveal many similarities in the emotions involved in drinking, gambling, and driving a highpowered automobile. The uniquely American sport of drag racing manages to combine all three. Certainly there is much similarity in the public's attitude towards violating the laws which purport to regulate these activities.

In these circumstances we might expect to go on indefinitely with our present round of slogans and slaughter. Possibly we will. More likely not, however, for it appears the public attitude toward the problem is changing. The automobile is steadily losing ground as an object of our national affection. For more and more persons it is becoming little more than a means of transportation: if restrictions are necessary to make it a safe means of transportation, more and more of these persons will accept them. This process will be hastened if it is true, as I suspect, that the problem is getting worse.

There could hardly be a better example of our lack of information about this problem than that we don't really know if it is getting worse or not. The question is confused at the outset of our emphasis on deaths and the death rate. For a generation the number of traffic fatalities has remained stable at about 37,500 deaths per year. As the total mileage driven has increased, the death rate per hundred million miles has correspondingly declined. This has been going on all over the world. The most likely explanation is simply that doctors are getting better at keeping people alive, while the increasing number of motor vehicles has probably increased the speed with which injured persons get to the doctor, and vice versa.

Automobile injuries are not, however, primarily fatal. For every fatal injury there are upward of 125 nonfatal injuries. The total number of injuries, rather than the tiny fraction of fatal injuries, is the true measure of the problem. Here we find anything but stability. Of 31 States for which I have been able to obtain detailed injury statistics for the decade 1948 to 1957, 17 showed an increase in motor vehicle injuries of over 100 percent. Florida showed an increase of 486 percent. In New York the total went up 125 percent and the rate of injuries per 100 million miles traveled increased 44 percent. It would be wrong to put too much faith in motor vehicle statistics compiled by State governments, but these figures surely indicate something is going on.

If it is true the public attitude toward safety is changing, if we are going to encounter a serious demand that something be done about the problem, we are headed for a crisis because it is most unlikely that our present laws or our present means of enforcing them can effectively respond to this demand.

For 4 years, as an assistant to the Governor of New York State, I was concerned with the formulation and execution of traffic safety policy. Latterly I served as chairman of the State's policy body in this field. I

came gradually to feel we were all involved in a monstrous deception, designed to conceal our ignorance from the public and ourselves. So far as the motor vehicle laws are concerned, in New York State, as elsewhere, the logical fallacy of petitio principii has been elevated to a way of life. With minor exceptions, the basic assumptions on which the laws are based are simply taken for granted. This results in a circular system of reasoning which continually proves itself. Thus we declare driving over 50 miles per hour to be unsafe. We know that 36 percent of the automobiles on State roads are always going faster than 50 miles per hour. Whenever any of these are involved in accidents, we do not have to inquire why. We have already legislated the explanation: speeding.

By explanation, of course, I mean that the police know who to arrest, the courts know who to fine, the State knows whose license to suspend. Thus we satisfy the primitive need when anything unpleasant happens to identify and punish the guilty person. This makes everybody feel better, but there is no way to know whether it prevents accidents, because we have not proved either of our major assumptions: that speeding causes accidents, or that punishing persons for speeding will prevent them from doing so.

All of our traffic laws are based on assumptions as to how accidents happen and how they can be prevented. Yet we have never troubled to verify most of these assumptions by the rigorous, scientific methods we take for granted in other fields of public health. It may be that most or even all our assumptions will prove correct. But until we have proof, are we not really acting like muddled peasants locking the windows against the infection of the night air?

I think particularly of the problem we had in New York State with this question of speeding. Across the border, in Connecticut, Governor Ribicoff had begun an heroic crackdown on speeders. The whole Nation was impressed by the courage this took. Licenses were being suspended wholesale. And, sure enough, the number of deaths went down a bit and so did the death rate. But the number of accidents increased, and the number of injuries increased. Most distressing of all, the rate of accidents and injuries increased. In 1955 there were 210 injuries per hundred million vehicle miles traveled in Connecticut. By 1958 there were 227. After 4 years of crackdown the chance of getting injured had increased 8 percent for every mile traveled.

These results became particularly distressing in the light of a vast study of speed and accidents on the open highway carried out by the Federal Government during these very years. This study, sponsored by the Bureau of Public Roads, was incomparably the largest of its kind ever undertaken. It covered 3.7 billion vehicle-miles of travel in 11 States, and accidents involving 10,000 vehicles. Roadside interviews were conducted with 290,000 drivers. The Federal Government found that for speeds from 35 miles per hour to 65 miles per hour the faster you drive, the fewer accidents you have. Cars going 35 miles per hour were involved in 600 accidents per 100 million vehicle miles of travel. Cars going 65 miles per hour were involved in fewer than 100 accidents for the same exposure. At 65 miles per hour the involvement rate began to rise. But even at 80 miles per hour it was only one-quarter the rate of 35 miles per hour.

Could it be that the State of Connecticut, by forcing its citizens to drive more slowly, has forced them to have more accidents? We know that an enormous effort has been made to make them drive more slowly. We know the Federal Government has found that accident rates at low speeds are much greater than accident rates at high speeds.

We know that in Connecticut, while speeds presumably have gone down, the accident rate has gone up. I assuredly don't know for certain what is the explanation, I don't know if in fact speeds went down, but is it not time we took a closer look at this question.

Of course, this is not so much a problem for us in New York State. We have a 50 mile speed limit, but we don't enforce it. We pretended to enforce it and hundreds of thousands of drivers are arrested each year for violating it, but as I said earlier, 36 percent of the vehicles traveling are always violating the law. Incidentally, one of the pillars of our traffic safety program is the point system under which we take away the licenses of persistent violators of the traffic laws. Oddly enough, in 1954, for example, with over 600,000 reported traffic convictions, barely 2,000 drivers got caught speeding 3 times in 18 months. This isn't bad considering that over a third of our 5 million drivers were speeding every day. Unhappily for these poor fellows, they were labeled persistent violators and stripped of their right to drive for varying periods.

This whole question of accident-prone drivers, and persistent violators very much wants a closer look. Certain types of drivers seem to have high accident rates. The very young and the very old have more accidents than those in between. People who get into trouble with the criminal laws get in trouble with the traffic laws. People with family troubles incline to have automobile troubles. We can make these correlations, but what can we do about them? These are not superficial qualities to be altered by a safety poster or a traffic court fine. And even supposing you could take all these drivers off the highway, what would you have left? You would have left the overwhelming majority of drivers—and accidents. Teenagers, for example, are involved in accidents at a rate in excess of two and one-half times that of all drivers. But altogether they only account for 6 percent of the accidents. Incidentally, the Bureau of Public Roads found that on the open highway teenagers have over four times as many accidents at 30 miles per hour as they do at 60 miles per hour. Does this mean we should urge juveniles to drive faster? I think it is time we checked.

Try as we will to identify some particular kind of conduct or person to blame for the problem of traffic safety, we keep coming back to the central fact that the overwhelming number of accidents involve what we call normal people acting in a routine manner which suddenly fails them.

At first it would seem the conclusion to be drawn from this is simply that a certain number of accidents will occur for any given amount of exposure to accident possibilities. And if, as we are told, 1970 will see 100 million motor vehicles traveling a trillion vehicle miles, we may expect it will also see 20 or 25 million vehicle accidents.

This is not necessarily so, however. We have also found rather startling differences between the accident experiences of different groups of people which cannot be entirely explained by factors such as age or sex or other immutable qualities. For example, the Bureau of Public Roads found that two-door sedans had accident involvement rates 4 times as great as hard tops; convertibles, 2 times as great as station wagons. The Bureau found that cars over 10 years of age have nearly 2½ times the accident involvement rate of newer cars. It found that during the day local drivers have a 75 percent higher accident involvement rate than out-of-State drivers, and at night the difference rose to 250 percent. We have long known the great difference in the rate of accidents of different types of highways.

We have found similar differences between the geographical locations, even esthetic sensibilities.

Clearly there must be an explanation of these differences, something about one type of highway, or automobile, or person makes for safer driving. Perhaps there is a single factor, more likely a kind of safety syndrome which produces this result. If we could identify these single or multiple factors, it may be they will prove transferable. Obviously, this is so in the geometric design of highways. Perhaps it will be so between, say, occupation groups.

We do have evidence that you can affect driving performance rather dramatically. For example, the brilliant research group at Dunlap & Associates of Stamford, Conn., brought about an 80 percent drop in personal injury accidents at one Air Force base by means of a scientifically designed safety program.

Nor does this kind of research necessarily involve vast undertakings. You may have noticed the New York Times report of the study conducted last summer by the distinguished epidemiologist, Dr. William Haddon, Jr., of the New York State Department of Health. With a handful of associates, Dr. Haddon stopped 212 persons on the streets of Manhattan and when he was done produced perhaps the first accurate knowledge of pedestrian fatalities we have ever had.

Here is where the district attorneys of the Nation come in. I am suggesting we must undertake a general revision of our traffic laws to establish them on the basis of a systematic, continuing, study of driver behavior and automobile design. The object of our traffic laws must not be to punish crime, but to prevent accidents and injuries. I can conceive of no more important force in bringing about this revision than for the chief law enforcement officers of the Nation to begin demanding that they be given effective laws to enforce. I can think of nothing more potent than for the district attorneys to begin asserting that if they are to ask that citizens be fined, imprisoned, and punished for violating the traffic laws, both parties have a right to know that there is some scientific evidence to show that these laws should have been obeyed in the first place.

This is the first thing you can do. The second thing is to make a special effort to be of help whenever any research activity is taking place in areas under your jurisdiction. The kind of research that pays off in this field involves all manner of legal obstacles and hazards for the researchers. It is almost impossible to perform successfully without the full cooperation of the police and the law enforcement agencies. A fine example of what can be done is the way the officials in the Boston area are co-operating in the exciting research on fatal highway collisions being carried out by the department of legal medicine at the Harvard Medical School.

The third proposal I will make to you as district attorney is a more complicated one. It concerns the whole nature of the traffic laws.

If our laws are to be revised, more than just the public ambivalence about traffic safety will have to change. Even a willing public will not be an informed one. We must expect that in the future, as in the present, a powerful force of special interest and general ignorance will oppose any serious effort to investigate or do anything about the problem of traffic safety. Such efforts are easily obstructed, because they involve the legislative process which is simply not suited for the enactment of technical regulations governing an activity of half the population on the one hand, and the

most powerful economic interest in the country on the other.

I have, therefore, a simple proposal to make. I propose that traffic regulations be removed from the area of statutory law, and be made part of the public health code, to be promulgated by the public health authorities of the State governments. As far back as the 18th century we have had public health regulatory agencies for the purpose of establishing sanitary regulations to control and prevent epidemics. It is time the same step be taken to control the epidemic on our highways. Within general outlines established by the legislature, the medical authorities of the various State governments should be given authority to establish the requirements for driver licenses and the rules for driver behavior and be given general surveillance over highway and automobile design.

This would put responsibility in the hands of persons capable of exercising it. What is the point of asking a legislature to determine how much a person may drink before driving, or what kind of eyesight he must have to get and keep a license. The legislative antics that ensue debauch and stultify the whole democratic process. These are matters that should be left to the experienced judgment of persons trained in the medical and related sciences.

This would put responsibility for action in the hands of persons who are least subject of the pressures of special interest and general ignorance of which I have spoken.

Finally, this would put responsibility in hands the public has learned to trust. Clearly, the public has little faith in the present system. Twenty million traffic cases a year go into court with no noticeable effect. But if the courts began enforcing regulations which had sanction of the medical profession behind them, might not the public come to feel these regulations were designed to protect the motorist, not to oppress him? Is it not true that few persons hesitate to violate a speed law today, but most would think twice before drinking water a county health officer had declared impure?

Important as are the three measures I have mentioned to you, I feel they lead to a further development of even greater importance. By establishing driver regulation on a scientific basis, we may then move on to the point where we ought really to have started, which is the regulation of the design of the automobile.

Any rational approach to the problem of traffic safety would not start with the driver. There are just too many. We already have 82 million. In a decade we expect 100 million, driving a trillion miles. When we can get half this number to vote for a President once every 4 years we think democracy has triumphed. It is idle to suppose very much can be done about the driving behavior of all or most of them. Something, yes, but not a great deal.

With the automobile, however, there are enormous possibilities for improvement. Here there are probably not more than a dozen people who need to be persuaded in order to bring these improvements about. These improvements fall into two general categories.

First, it is becoming apparent that much can be done to improve the design of our automobiles so they can be driven more safely. This does not necessarily mean making them simpler, it could mean making them more complicated so as to keep the driver alert, but one way or another the techniques of effective machine manipulation can be applied here.

Some automotive design improvements would be relatively simple. As our cars are designed with lower and lower silhouettes,

we will shortly be driving flat on our backs. This is hard to do with maximum safety. The average eye height is already below the recommended level, but there would be no problem restoring it. Other improvements would be more complicated. For example, we need to find out what is the effect of planned obsolescence on older cars. Do the brakes give out at the same time the chrome begins to rust? Should we encourage manufacturers to produce a basic car which is not changed from year to year, which they can get the kinks out of, and which will not fall to pieces like the one hoss shay in 7 years time? Or perhaps we should ask for a car which will be sold on the explicit understanding that after a certain point it will be unsafe to drive.

Second, it has for some time been apparent that enormous improvements could be made in the interior design of automobiles so as to minimize the injuries which result from accidents to make accidents safe. This is the principle known as "packaging" the driver. It was clearly stated by Dr. C. Hunter Sheldon in the Journal of the American Medical Association:

"The accidents may occur as the result of speed, inadequate highways, poor judgment, or mechanical failure, but none of these actually causes the passenger injury. The injury occurs primarily as a result of faulty interior design of the automobile. 'Faulty' is actually a gross understatement, as there is almost no feature of the interior design of a car that provides for safety. The doors, seats, cushions, knobs, steering wheel, and even the overhead structure are so poorly constructed from the safety standpoint that it is surprising anyone escapes from an automobile accident without serious injury. The elimination of the mechanically hazardous features of interior construction would prevent approximately 75 percent of the fatalities, or 28,500 deaths each year."

For some years the American College of Surgeons and the American Medical Association have been pressing the automobile manufacturers to do something about this problem, but with very little success. I would suggest it is neither reasonable nor fair to expect success. The single objective of the automobile manufacturer is to make money by selling automobiles. They do this by reminding customers of the joy of motor-ing and by making the driver feel powerful and secure inside his automobile. Is it reasonable to expect the manufacturers will at the same time equip their machines with padded dashboards, seat belts, and the other safety features that are apt to remind potential customers that, apart from war, the automobile is the one experience of violent death and injury which civilized man must still endure?

I do not suggest that the design of automobiles be made subject to direct government regulation, but I think it is apparent that a massive effort must be made to determine which are the safest designs and by persuasion to induce the manufacturers to adopt them. Here again I feel this is a task which we could, with confidence, entrust to the public health profession.

All these possibilities inspire the hope that we are soon to see advances in the field of traffic safety, not only in our understanding of the problem but in the uses to which we put our understanding. It is particularly encouraging that this issue is receiving the attention of our Nation's district attorneys who are admired for many things, but first of all for courage.

White House Conference on Children and Youth

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, March 31, 1960

Mr. WILLIAMS of New Jersey. Mr. President, all Americans have a stake in the White House Conference on Children and Youth now underway in Washington. Like many others, I hope that its discussions and recommendations will result in clearer understanding and action where action is needed.

I am particularly happy that I am represented at the conference by Mrs. Joseph Lerner, of Newark. An article in the Newark Star-Ledger recently described just a small part of Mrs. Lerner's qualifications for the assignment. It said:

Mrs. Lerner, who hopes to come away from the White House Conference with some positive recommendations for the youth of New Jersey, helped organize the Citizen's Committee with her husband (former Newark Magistrate Joseph Lerner) in 1955. Members of the committee included police, psychiatrists, teachers, and social workers.

A former social worker, Mrs. Lerner says the committee found over and over again there is no one answer to combat juvenile delinquency, but a combination of answers.

"And that the most important single factor is a good home," she declares.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the March 21 Newark Star-Ledger which discusses the Conference.

I also ask unanimous consent to have printed in the Appendix of the RECORD two other items relating to our youth. One, an article from the March 23 issue of the New Brunswick Home News, describes the clearheaded purposefulness of a New Jersey student who wishes to enter public service.

The other item is the short speech made by Ronald G. Bressler, on behalf of the Bayonne (N.J.) Board of Education on March 22 when that community welcomed Miss Sandra Dee, the 18-year-old actress who has already started a career before motion picture cameras. I am told that 5,000 persons attended the welcome, and I believe that Mr. Bressler's remarks express the pride a community feels in the achievements of one of its young people.

All New Jersey is proud of the other talented young men and women who represent New Jersey so adequately in so many fields. It is always a pleasure to read the lists of scholarship winners in the many national competitions, because we usually find New Jersey students well represented on those lists, for instance. And we usually find that young people from the Garden State are well represented in any creative and constructive

effort that occurs to them or is brought to their attention.

There being no objection, the editorial, article, and address were ordered to be printed in the RECORD, as follows:

[From the Newark Star-Ledger, Mar. 21, 1960]

IN PERSPECTIVE

The White House Conference on Children and Youth, which opened last night, will draw a lot of attention to the problem children. How to combat juvenile delinquency, for instance, will be a prominent subject.

However, it would be wise not to lose sight of the fact that problem children and juvenile delinquents make up only a small fraction of the youth of the country.

President Eisenhower, in opening the conference, pointed this out when he warned against "a tendency to generalize pessimistically about our youth—to attribute to the many the failures of the few."

On the other hand, too much complacency would be just as unwarranted. It may be difficult to get things in their proper perspective. But that's the first step toward devising effective solutions.

[From the New Brunswick (N.J.) Home News, Mar. 23, 1960]

HE KNOWS WHERE HE'S GOING

WASHINGTON.—James Weiss, a senior at Highland Park (N.J.) High School, believes in looking ahead.

In the past two days he's visited officials at the Department of State and the International Cooperation Administration. His object, to plan a career in public service.

Senator HARRISON A. WILLIAMS, JR., Democrat, of New Jersey, arranged the appointments after he received a letter from R. Richard Johnson, principal of the Highland Park High School.

The principal's letter said: "James has developed in this past year an interest in the general area of public service. More specifically, the governmental service in international relations and diplomatic service. Jim developed this interest through his participation in the American field service student exchange program. In the past 2 years he was active in this program in Highland Park High School and helped generate enthusiasm among the students for this plan. This past summer he was selected as our American field representative to a German home. Since his return he has been even more enthusiastic and interested in the general field of Government service."

"Jim will graduate high in his class; has played varsity basketball, and has a fine disposition and personality. He is also an accomplished musician. I know there isn't a student or teacher who would give him other than the very highest recommendation."

WILLIAMS, impressed by Weiss' qualifications, sent information to him and suggested that he visit here to receive on-the-spot information about the qualifications he will need. Jim, 17 years old, who will be graduated this June, lives at 19 Grant Avenue in Highland Park.

MISS SANDRA DEE

Dr. Phillips, Dr. Merity, guest of honor. Miss Sandra Dee, ladies and gentlemen: I have the privilege of paying tribute to a great talent of our own city, Miss Sandra Dee. Returning to Bayonne, Miss Dee brings with her the personification of the best of our American way of life. The living example of the spark of ability in a free society, she

adds much dignity, and, if you will, pride to our city. The tributes accorded this young lady can be none too great for the many hours of arduous effort that surely has gone into her success. Miss Dee set forth across this Nation for a mark of achievement from which she has emerged with the respect and admiration of millions. The dignity and pride she has bestowed upon her hometown, I feel certain, will ever be treasured by all our citizens. In speaking for all of our former classmates, Miss Dee, I would like to close by wishing you only the best of health and the greatest continuing success.

Rural Development

EXTENSION OF REMARKS

OF

HON. TOM MURRAY

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. MURRAY. Mr. Speaker, my colleagues in Congress will be interested in seeing how young people view the importance of rural development. Therefore, I am placing in the RECORD the speech of Waymon Lard, a member of the Future Farmer Chapter of Hardin County High School in Savannah, Tenn., who won the west Tennessee public speaking contest.

Mr. Lowell Phillips, vocational agriculture teacher, is chapter adviser. State Representative James I. Bell is the supervisor of vocational education for Hardin County schools and Mr. H. F. Snodgrass is superintendent of education.

In this connection I wish also to give recognition to Mr. Con Welch, a prominent banker and civic leader of Savannah who is the chairman of the rural development program committee in Hardin County, Tenn. The program in this county has been so successful—as a demonstration county—that it has not only attracted statewide attention but is pointed to as an example of success by the leaders of the national program.

The speech follows:

RURAL DEVELOPMENT

(By Waymon Lard)

I am grateful for the opportunity as a Future Farmers of America member to speak on a subject that has been one of my main concerns since I enrolled in vocational agriculture as a freshman. This is the complex, deep-rooted problem of widening opportunities for our underdeveloped rural areas. Fifty-six percent of our Nation's farmers produce only 9 percent of the Nation's marketed agricultural products. This large number of rural people have incomes so low they cannot afford the goods and services most of us take for granted. Many of them need special assistance if they are to improve their standard of living.

The poverty existing among this group of people—in good times and bad—has a weakening effect on the entire Nation. Production lost because of lack of education and skills, poor health, insufficient employment, and lack of resources can never be recovered. It remains a stumbling block, increasing indebtedness from year to year. The social conditions arising from low production and low income often generate an apathetic attitude. Community, educational, religious and civic affairs suffer. Confronted with the

overwhelming handicaps of chronic poverty, many people with very low incomes see no possibility of improvement using the inadequate resources and few opportunities available to them.

The development of agriculture's human resources is one of this Nation's most important economic and social problems. According to U.S. Department of Labor projections, employment of farmworkers and farmers will decrease about 15 percent during the next decade. Perhaps one reason behind this migration is the low-income factor. Very low incomes—that is, incomes in the range of \$1,000 a year, or less—are concentrated in agriculture. Less than one-fifth of the farmers in my county produced and sold \$2,500 worth of products in 1955. Investment in land and buildings is only about one-third of what it is elsewhere. Average schooling of adults on farms is 6 years. There have been few outside jobs for this low-income group, while the national figures show that 30 percent of the income of farm families comes from sources other than the production of their farms.

To be more specific, there are still too many farms of low production and too few outside farm jobs for their underemployment problems. Families on these low income farms have not shared in the remarkable advance of agricultural techniques in recent years. They have gained almost nothing from price support programs. Many of their farms are too small for the mechanized techniques of today. Much of their soil is unproductive, not even carrying its tax burden. In my county more than half of the farmers depend on such farms for their livelihood. In spite of Government and private programs of aid to agriculture, improved farming techniques, and the increased national income of the last decade, a sizeable segment of our agriculture has been unable to raise its earnings. In fact, many of that number have increased their indebtedness from year to year.

President Eisenhower recognized this fact when he requested early in 1954 that special attention be given to the problems of farm families with low incomes. It was apparent then that something more should be done to help this group of our people break the deadly cycle of low production leading to poverty.

In thinking about this problem, the greatest factor in reaching for solutions seems to rest in the hands of our youth. They are in the best position to improve their standard of living. Given a chance through good educational programs it is up to these youths to literally lift themselves up by their bootstraps.

Farms with very low incomes are found everywhere in the Nation, but most of them are concentrated in the South and my county is no exception.

This area has been an economic paradox. Even though a large part of the Nation is enjoying full employment and high economic activity, chronic underemployment best explains their situation.

What can be done about low rural incomes in our county and communities? What is the answer? The answer comes from within the county itself, from the people who make up the county. Our Future Farmers of America chapter is working with adult farmers in securing new cash crops to supplement regulated cotton crops. Some of the new cash crops that have been successful are strawberries, okra, snap beans, and pimento pepper. Swine production in the county has been improved by the addition of a purebred boar (meat type) in each community. These boars, bought by the local banks, are being supervised by each F.F.A. chapter in the county and community organizations. Community clubs have been organized in most of the community areas. School surveys have been taken showing educational strengths

and weaknesses. The ministerial association has conducted a county revival meeting with a different denominational speaker each night. The White Oak Creek Watershed Project has been surveyed, under which over 122,000 acres can be drained. An industrial committee is diligently trying to secure new industries to furnish employment for our underemployed rural people. A teenage country club has been organized to furnish recreation for the teenagers. It is the overall aim of this so-called "Teen Town" to promote and foster supervised recreation for the teenagers of our county and surrounding counties. This "Teen Town" is operated by the teenagers themselves and involves many decisions they will have to make as tomorrow's citizens.

As a pilot county in the rural development program, Hardin County is striving toward creating opportunities for its rural and urban citizens. These opportunities should create a more favorable situation for our people in relation to the high economic situation of our Nation.

In reality this is a transfusion of life, using the energies of home folks to make Hardin County a better place in which to live.

Tight Money on the Home Front

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, March 31, 1960

Mr. WILLIAMS of New Jersey. Mr. President, we here have argued the merits and demerits of the administration's tight money policy at some length. Many in the majority have made hypothetical cases to buttress arguments that tight money results in an economic slowdown. We have also quoted statistics and pointed with some concern at "trends."

An article in the Newark (N.J.) Sunday News of March 13 gives a specific example of one effect of high interest rates. It shows how building on a nine-county area of New Jersey has fallen off because, according to the article, builders "are now spending their time shopping for mortgage money at interest rates they can afford."

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOUSING BLOCKED BY TIGHT MONEY

(By Andre Briod)

A potential rental housing construction boom in northern New Jersey is being forced to await the breakup of a bottleneck resulting from the current tight money market, according to Federal Housing Administration officials here.

Figures issued by Peter J. Longarzo, head of the FHA's regional office in Newark, indicate that northern New Jersey could enjoy more major apartment construction than at any time since World War II—if prospective builders could borrow money at rates they are willing to pay.

Longarzo, whose office covers the 13 northern New Jersey counties, said plans in various stages which have reached his office would produce apartment projects in his

region worth approximately \$150 million and housing for about 8,000 families.

Most of the builders are now spending their time shopping for mortgage money at interest rates they can afford, he said, and the current tight condition of the money market makes it a difficult search for them.

CAN'T FIND MONEY

Longarzo said there are now 15 commitments for mortgage insurance issued by his office, but for which the prospective builders cannot find the money at prices they can afford. Those commitments, if exercised, would produce 1,550 units worth about \$30 million.

His office is currently processing applications for another 15 commitments which would produce an additional 2,100 units worth about \$40 million, Longarzo said. Those applicants, like those who already have their FHA insurance commitments, are still out shopping for money, according to Longarzo.

Beyond that, the Director said, his office has made preliminary feasibility studies on a host of other projects under consideration which would produce an additional 4,500 units of rental housing. These, he calculated would be worth together at least as much, if not more, than all of those for which formal applications have been filed or on which commitments have been issued.

FHA records show that during the 3 years from the beginning of 1956 to the end of 1958, commitments were issued by the FHA on projects totaling 3,860 units, worth just under \$50 million. That amounts to considerably less than half of what is now in the hopper.

Longarzo pointed out that the figures through 1958 included a single commitment of over \$15 million to Metropolitan Corp. of America for the construction of 1,240 units between Broad Street and Clifton Avenue, which is a title I urban renewal project.

CAN TURN TO FNMA

The projections for the near future, Longarzo said, do not include anticipated applications for mortgage insurance to cover the big block of title I apartment construction Newark hopes to achieve within the next few years. Redevelopment officials hope that at least 1,500 units, and maybe more, will be started during 1961.

Longarzo said that title I project sponsors will not have as difficult a time getting their money, because they can turn to the Federal National Mortgage Association (FNMA), a Federal agency which is authorized to buy title I first mortgages.

The FHA regional chief, who took his post here in 1957, attributed the ballooning interest in major apartment construction in this area to one primary factor, consumer demand. He added that the prospective boom has been encouraged by what he said is an understanding on the part of builders that FHA financing terms are more to their advantage than they realized at first.

highest caliber. The junior Senator from Hawaii, the Honorable OREN E. LONG, recently discussed the qualities which make up the kind of leadership now so urgently required. His remarks, delivered at the March 13 Founder's Day celebration of the Washington Club of Phi Sigma Kappa Fraternity here, were based on a near half century of experience as an educator, administrator, and legislator. Because of their pertinence, under unanimous consent, I include Senator Long's remarks on this occasion in the Appendix of the Record, as follows:

LEADERSHIP

An anniversary is always an interesting event. It is also significant. It deals with beginnings, reviews accomplishments, and most important, points to the future. And so it is with the 87th anniversary of the founding of Phi Sigma Kappa. Ours is a fraternity dedicated to three cardinal principles—brotherhood, scholarship, and character.

When I stop to consider what these principles mean, I realize our fraternity's great potentialities for developing leadership—the type of leadership upon which the future of our society and our Nation depends. It is from such groups as the Lambda chapter here at George Washington University that our future leaders are being groomed for the big tasks that lie ahead.

There is a chronic demand for new leaders with new approaches to continuing problems. Each year our Nation grows in population, wealth, and complexity. Government, business, the arts all require capable leadership.

Increasingly, as in the field of rocketry and nuclear physics, there is recognition that highly gifted people can assume leadership at an early age. Senator KENNEDY is hoping to have the advantage of this realization as he seeks the nomination of the Democratic Party for the Presidency at the age of 42. Of the 34 Presidents, only Teddy Roosevelt was that young when he assumed office—and even Teddy had less hair on his head than does Senator KENNEDY.

On the basis of my near half-century in public service, including teaching, administration and legislative experience, I would like to offer a few observations on "leadership"—observations which I hope may be of particular interest to the younger members of our fraternity.

A leader is one who goes before, to guide or to show the way—a person who proceeds or directs in some action, opinion or movement. He coordinates the efforts of other men, inspiring them to accept responsibility and to use their judgment and initiative.

He has an analytic mind, organizing ability, capacity and willingness to develop others. A leader will have as his duty not only to satisfy human wants and to meet the needs of the community, but to anticipate these wants and needs.

Leaders are people who never know that a thing cannot be done. Rather, they say: "It can be done—it must be done. Let's see that it is done." And then they jump in and do it.

Leadership is not merely a question of seeing ahead; it is a matter of going ahead, of being big enough and brave enough to grasp every little detail as well as seeing the proposition as a whole and then executing it.

Men readily follow a leader who is always there before they are, clearly visible, and just where they expect him. They are especially eager to go forward with a man who never sounds a retreat. A leader must be always advancing, always struggling to make things better, to carry out some needed activity, to develop an idea.

And there is a pleasure in leadership.

Most men would cease striving when young if it were just a question of making money or of attaining a place of prominence—but leadership in itself is the big thing.

Leadership comes to those who can shoulder it, to those who know how to use it, to those who are willing to assume responsibility.

There is another thought in connection with leadership that is important: One cannot become a real leader who has not learned how to be a good follower. And that is where brotherhood is so important.

There are certain traits of leadership that are almost essential if it is to be effective.

One of these is optimism—a belief in humanity and in the society of which the leader is a part. We hear a great deal about problems of the world. There will always be prophets of doom. We need to hear more about the good that is in the world, and the opportunities that are with us.

Our world today is far from being a perfect world. It may be a hungry world, a bankrupt world, a selfish world, a worried world, a saber-toothed world, a fearful world, an uncertain world. But we should never forget that it is a world that has much of hope and of encouragement.

Some time ago, I read a magazine article that might have been called a study in pessimism. The author pointed out that records of the last centuries—a total of 18 generations—show that each generation was obsessed with the idea that its problems were just a little more serious than the problems of any preceding generation and, in all too many instances, the accepted leaders raised serious questions as to whether their social order would continue to exist.

We certainly think that we are living in a period of stress, turmoil, uncertainties and dangers. Perhaps we are. But so have other generations and they continued on their way. In spite of problems, civilization has survived and expanded.

A good many years ago, Charles F. Kettering, vice president in charge of research, General Motors Corp., wrote an article entitled "Age of Opportunity." I think his observations are equally pertinent today. He wrote:

"This world we live in today," he said, "is not done—is, instead, only begun—and the builders of tomorrow's bright new world will have a host of advantages when they come to grips with the questions it will bring.

"Young America is coming into a world that is only begun, a world that despite the accumulated toll of centuries, still admits want, disease, hardship. When today's young men and their sons and grandsons of tomorrow have finished with it, we'll be a little nearer the kind of world we ought to have.

"When they tell us in research that a thing can't be done, that's our cue to go ahead and do it.

"Progress doesn't come in leaps. It's a slow, weary, laborious process.

"Not so long ago, I was awarded an honorary degree by one of our eastern colleges. I went east for the commencement exercises. The alumni met in 10-, 25-, and 50-year groups, and I happened to be thrown in with the 25-year group when this thing happened:

"A well-dressed, successful-looking man stood up to address the 25-year alumni. In his hand he held a letter, yellowed with the years. 'I wrote this letter to my father on graduation day,' he said. 'And in it I bewailed my lot for having graduated into a world that held forth so little opportunity.'

"When the speaker finished, the president of the college arose. He had a thick book in his hand. To the speaker he said, 'In this book we have collected letters from our students over a period of 150 years. Each letter in each succeeding year, laments the passing

Leadership

EXTENSION OF REMARKS

OF

HON. DANIEL K. INOUE

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. INOUE. Mr. Speaker, our Nation, faced as it is with the problems of the cold war and the complexities of the new age of intercontinental missiles, atomic energy, and the exploration of space, sorely needs leadership of the very

of opportunity, the dire plight of the student who was thrown out into such a dreary world. I should like to add your letter to our collection."

"So there you are. This doubt and uncertainty is ageless. And today, more than ever, it is entirely groundless."

"The trouble with most of us is that we seek to back into the future, like the famous bird that always flew backwards because it wasn't interested in seeing where it was going, just wanted to see where it had been."

"You can't go through life on a futarama. Too many of us just want to sit down and ride along surveying the world that is to come. Well, if many of us do that, the sights we'll see will still be those of the world today."

"I don't think there was ever a man born who wasn't born into an 'age of opportunity.' The main thing to remember is that opportunity is within us, offered to rich and poor alike, is entirely democratic. But we dare not back into it, for we need to keep our eyes and our hands ahead."

There is another quality that the leader should have—a complete acceptance that growth presupposes change.

When we talk about conserving our American institutions, we do not mean keeping them as they are. The very essence of democracy is growth. Failure to recognize this is rank stupidity. The glory of our American way of life is that it provides for change, for orderly change in our institutions.

No institution has validity or sanction except as it serves all the people. Any loss of the power of the people to bring about change or the loss of the will to change means that democracy has been lost. Even the loss of interest in change is fatal. It can mean only stagnation. Extreme fear of change leads inevitably to servility.

A willingness to face new conditions is basic in leadership. If there hadn't been change, we would be nomads of desert and forest, of mountain and stream. If it hadn't been for revolution, the vast majority of humanity would be in servitude.

Without this willingness to face change, even to demand change, there would have been no Magna Carta, no emergence from feudalism, no birth of an independent republic in the New World, no freeing of the slaves.

The real leader will be a reformer. The reformer is one who, when he becomes aware of injustice, of intolerance, of ugliness, sets about to improve these defects. But the true reformer is seldom a revolutionist. He is content with growth, with evolution. He allows for the past, recognizes the limits of the possible and impossible, is cautious with the changes he proposes, and thus paves the way for the future.

In a society as complicated as ours has become, and in a world that is characterized by uncertainties, it is essential that we hold fast to our traditional institutions, but that under wise leadership we make changes necessary to improve and, in reality, to maintain the best of everything in our national life.

There is another point at which I hope you young men as leaders will be realistic and exceedingly wise. Everyone of us is aware of sharp differences of opinion that exist in our community and in our national society—even in the Senate of the United States. Never before was there greater need for understanding and tolerance. The glory of America has been that men can be as liberal as Jefferson and Lincoln and Woodrow Wilson and Franklin Delano Roosevelt, or as conservative as Adams and Hamilton and Cleveland and McKinley and Hoover and great Americans.

They can hold viewpoints in regard to labor and management as widely separated as Sam Gompers, William Green, Philip Murray, and John L. Lewis, as compared

with Andrew Carnegie, James J. Hill, E. H. Harriman, John Raskob, or Charles E. Wilson and yet be great Americans. That's the glory of America.

In relation to our American institutions, we want to keep the circle big enough for all who are devoted to the American concept of freedom and democracy. In this society there is no place for the philosophy of hate. The attitude of hating the boss is socially unsound and can result only in weakening our community life and national life, and the philosophy that makes every officer of the union a crook, a subversive, a wholly selfish manipulator, is equally dangerous to our happiness and well-being. There is so much good in America and so much good in all the individuals and the organizations that love America, that the development of understanding and good will must be a conscious objective of everyone who is a leader.

There is much more that might be said on an occasion like this, but I wish to close at this point by stating that I believe in our fraternity because it is made up of men who believe in themselves, in their fellow men, in their community, in their nation, and who believe above all that the real glory and strength of a man or of a fraternal organization or of a nation lies in spiritual values rather than material values.

High Praise for Zablocki's Work in Congress

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 31, 1960

Mr. PROXMIRE. Mr. President, one of the ablest and finest Members of the U.S. Congress is the dean of our Wisconsin Democratic delegation—the Honorable CLEMENT ZABLOCKI, of Wisconsin's fourth district, that is Milwaukee.

CLEM ZABLOCKI recently was the object of a well-deserved testimonial dinner here in Washington for his vital role in pushing a Polish Children's hospital.

In one of the most impressive displays of popularity seen in a long time—more than 100 Members of Congress turned out to honor CLEM ZABLOCKI, including Speaker SAM RAYBURN and House Majority Leader JOHN MCCORMACK. The Speaker spoke for many people who have known ZABLOCKI when he called him "a man with a headful of commonsense." JOHN MCCORMACK called ZABLOCKI, "one of the finest legislators I have ever known."

I ask unanimous consent that the complete text of the Milwaukee Journal article describing the event be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PULASKI GROUP PAYS TRIBUTE TO ZABLOCKI—MILWAUKEE DEMOCRAT GETS AWARD FOR ROLE IN PROMOTING POLISH CHILDREN'S HOSPITAL

WASHINGTON, D.C.—The Pulaski Foundation gave a testimonial dinner Monday night for Representative ZABLOCKI, Democrat, of Milwaukee, to honor him for promoting better understanding between the peoples

of the United States and Poland. ZABLOCKI was awarded Polonia's "man of the year" award for his role in providing funds for a \$4 million children's hospital and pediatric center in Cracow, Poland.

PRIVATE CONTRIBUTIONS

As a high ranking and influential member of the House Foreign Affairs Committee, ZABLOCKI quietly inserted a necessary one line amendment into the foreign aid bill last year.

The amendment makes it possible to use for the hospital about \$2,500,000 from funds in the form of Polish zlotys that are accumulating to the credit of the United States in return for our sale to Poland of surplus farm products.

The remainder of the money is being raised from private contributors in this country by the American Research Hospital for Children Committee.

The presence of more than 100 Members of Congress among the hundreds of diners at the swank affair at the Mayflower Hotel attested to ZABLOCKI's popularity among both Republicans and Democrats. It was a remarkable bipartisan show of affection and respect. It also demonstrated why he was able to get his amendment through Congress. They let it go through "as a favor to Clem."

Speaker RAYBURN, Democrat, of Texas, told the diners that he was happy "to be here to pay tribute to a great young American who has established a reputation of rare intelligence and boundless patriotism."

"HEADFUL OF COMMONSENSE"

RAYBURN, certainly one of the most powerful men in this Capital, called ZABLOCKI "a man with a headful of commonsense." Turning to the Congressman from Milwaukee's south side, RAYBURN concluded:

"I'm glad, CLEM, that you're being honored, and that's why I'm here."

In the same vein, the House Democratic leader, Representative MCCORMACK, of Massachusetts, said that talking about ZABLOCKI was a "pleasant task," because he epitomizes everything that is noble and sincere.

MCCORMACK, who rarely attends dinners, praised ZABLOCKI for his high ideals and called him one of the most outstanding Americans I have ever served with.

"CLEM ZABLOCKI is one of the finest legislators I have ever known," MCCORMACK went on. He praised him for idealism and said he was humble but distinguished.

Senator MORTON, of Kentucky, chairman of the Republican National Committee, sent a message of best wishes to ZABLOCKI from the committee, noting that the children's hospital would help carry out President Eisenhower's people to people program.

Speaking for the Republican lawmakers present, Representative DERWINSKI, of Illinois, said the hospital project was a great accomplishment of ZABLOCKI's.

The principal speaker of the evening was Maj. Gen. Anthony J. Drexel Biddle, adjutant general of Pennsylvania and former Ambassador to Poland.

After the speeches were over, Representative FLOOD, Democrat, of Pennsylvania, the toastmaster, asked ZABLOCKI whether he had any opposition back home this year.

"We certainly have the varsity out for you tonight," FLOOD told ZABLOCKI.

ZABLOCKI, deeply moved, accepted the award with sincere humility. He insisted that the credit for proposing the project in the first place should go to W. O. Biernacki-Poray, architect, of Montclair, N.J.

Biernacki-Poray also was to have been honored, but he is in Poland working on the hospital which he designed.

The Pulaski Foundation is a nonprofit organization dedicated to the rebuilding of the birthplace in Warka, Poland, of Gen. Casimir Pulaski, Revolutionary War hero.

Employment Future for the Aged

EXTENSION OF REMARKS

OF

HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, the gradual increase in flexible retirement policies during the next decade will be encouraged by legislation adopted at this session of the Congress. The background of this problem is discussed in an article by Seymour L. Wolfbein, Deputy Assistant Secretary of Labor. This is the fourth in a series of articles prepared for Ray Henry, which appeared in more than a hundred newspapers throughout the country earlier this year. I commend it to the attention of the Members:

EMPLOYMENT FUTURE FOR THE AGED

(By Seymour L. Wolfbein, Deputy Assistant Secretary of Labor)

The 1960's will see an unprecedented rise in the number of workers in the United States. The Government looks for an increase of 13½ million in the labor force between 1960 and 1970.

However, the big story is not so much in the sheer size of the increase, substantial as it is, but who the 13½ million will be.

About 50 percent of the new workers will be people under 25 and about 40 percent will be 45 and older. The remaining 10 percent will be between 25 and 34 years of age. There actually will be a decline in the number of workers between 35 and 44.

Because nearly all the new workers will be at the younger and older ends of the age scale, our interest in these groups has increased.

And a good part of this interest is focused on what will happen in the 1960's to people 65 years of age and over, those who have reached what is often called the conventional age of retirement. How many of them will be working? At what will they be working?

Five important points can be made about the outlook for employment among people 65 and older in the next decade:

1. One of the overriding trends in the American labor market since the beginning of this century has been the persistent and substantial drop in the percentage of men 65 and over who worked.

Back in 1900, two out of every three men 65 or older were still working.

Now, with the transformation of our country from an agricultural to a nonfarm industrial economy and with the great growth of public and private pension plans, only one out of every three of the men 65 years and over is a worker.

There is nothing in the offing for the next 10 years which would reverse this trend.

As a result, we expect the percent of these men in the labor force to decline further—to a little over 30 percent. Because of this continued decline, the actual number of men workers 65 and over will show only a very small increase, despite a big rise in the number of men in this age group.

2. The employment outlook for women 65 or over is quite different. The percentage of older women workers has been edging up slowly in recent years until we now find that 1 out of every 10 women 65 or older works. We expect this proportion to go up.

By 1970 something like one out of every eight older women will be in the labor force.

Back in 1950 there were about half a million women workers 65 and over. The figure

is now about 1 million. By 1970, it will be closer to a million and a half.

3. For older people who remain in the labor force, employment opportunities ought to be very good, especially if we continue to enjoy relatively high levels of economic activity.

There are at least three reasons for this favorable outlook:

In the first place, the shortage of workers between 25 and 44 to which we have already referred will accentuate the need for more mature personnel for responsible positions in business, industry, government, teaching, etc.

Second, all of the evidence points to a continuation of the relatively greater growth during the 1960's in the professional, managerial, clerical, and related fields—exactly the occupations in which the older worker predominates.

For example: Almost two out of every five women 65 and older who now work are engaged in these white-collar job fields; this ratio is almost exactly the same for men workers in these age groups.

Thirdly, we expect a continued increase in the amount of part-time work available. This, of course, is important to the older man and woman who may not be able to work full time.

Our estimates show that part-time employment will increase by more than 30 percent during the decade of the 1960's, as against a less than 20-percent increase in the labor force as a whole.

4. The favorable trends mentioned above will not come about automatically.

They depend on the growing realization that discrimination on account of age does not pay off, especially in view of the almost unique kind of manpower distribution we are going to have during the 1960's.

5. Another important consideration in looking at the 1960's is whether there will be a change in the age at which workers will be expected to retire; whether retirement will continue to be compulsory at a given age—such as 65—or will become flexible depending on the individual worker involved.

This is basically a matter of resolution between labor and management.

However, we expect a gradual increase in flexible retirement during the 1960's for at least two reasons: The growing understanding that ability to continue to perform is not a worker's age alone and that there is an enormous variation among individuals in this respect; the need for able older workers in view of the expected shortage in some of the younger age groups.

The Late Honorable Russell Mack

SPEECH

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. SMITH of Mississippi. Mr. Speaker, the sudden death of RUSSELL MACK has been a great shock to all of us, but it was especially distressing to the members of the Public Works Committee, on which he served as an outstanding leader for many years. We were fellow members of this committee from the beginning of my service in the Congress, and we had many pleasant hours together on inspection trips and committee hearings in all parts of the United States.

RUSSELL MACK was a devoted legislator who made a major contribution to all the important legislation that came before our committee. We often had sharp differences about some of the proposals, but we were able to differ without rancor. It will be difficult indeed to replace him.

Mrs. Smith and I extend our deepest sympathy to Mrs. Mack.

Boy Scout Anniversary

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, March 31, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the Boy Scouts of America have just observed their 50th birthday, and it has been a half century of proud achievement and expansion into a worldwide youth movement.

We in New Jersey are proud to have the national headquarters in New Brunswick, which serves 3,700,000 boy members and 1,340,000 adult leaders. The benefits of scouting as a force against juvenile delinquency are well known. However, no less an accomplishment is the encouragement of self reliance, of a love for the outdoors and a respect for natural resources.

Dr. E. DeAlton Partridge, president of the Montclair State College, and an active staff director in the Boy Scouts of America, has written a most interesting and informative story about the Scouts. Mr. President, I ask unanimous consent that this article, which appeared in the Sunday Newark News on February 7, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FIFTY CANDLES DECORATE SCOUTING'S ANNIVERSARY CAKE

(By E. De Alton Partridge)

Fifty years ago tomorrow, on February 8, 1910, the Boy Scouts of America was incorporated in the District of Columbia. Today there are 3,700,000 boys in more than 130,000 Scout groups in the United States. More than 31 million persons have belonged to this movement in America as leaders or members since 1910.

Probably no youth movement in history has had the universal appeal of the Boy Scouts. It started humbly, almost accidentally, and spread like a prairie fire from one country to another until it circled the earth. Except in totalitarian countries, it has practically universal approval of all religious, racial, political and economic segments of society.

What is the secret of this amazing movement? Why did it develop so rapidly, spread so fast, and why has it kept its almost universal appeal for men and boys in 70 countries throughout the world?

The answers to these questions are not easy to establish. Certainly for any movement to meet with such continuing success it must have been spawned in a favorable climate. It must have had the elements of a rewarding and practical program and it must have had unusual leadership. Only

a combination of these factors could have resulted in the explosive growth since 1910.

At the beginning of the 20th century when the early designs of the Scout movement were taking shape America was a country ripe for the launching of an attractive program for boys. Growing industrialization was eating at the natural resources and changing the character of communities, large and small.

More and more youths were living in cities or villages with an increasing amount of leisure time on their hands. There was no organized recreation program and many of the traditional forms of recreation were becoming more difficult to practice. The "ole swimmin' hole" which at one time was available to almost every community was often the victim of suburban expansion or stream pollution. Parks and playfields were yet to come in any great number.

In those days amusement and recreation had to come from one's own wits. The motion picture theater was not yet a common community facility. The only means of transportation available to the average youngster were his legs, a bicycle or for some a horse. Excursions to distant places were, therefore, difficult and time-consuming.

Fifty years ago the schools had a limited curriculum dominated by the three R's. There were no gymnasiums and few public libraries. Schools did not often offer opportunities to play in the band or orchestra or sing in a glee club. Basketball, while invented in 1892, was still not a commonly played sport. Practically no church had a recreation hall.

While today the long family vacation together is a common thing, in the early days of this century it was unheard of except for the well-to-do. Even for those who could afford it, going away for a few weeks of fun in the country was a major undertaking which required days and days of planning and arrangement.

In a society like this, active, eager, energetic boys were more than ready for some program which would capture their imagination. And there were other forces at work too. The pioneer tradition was fresh in the land. Men and women were still alive who had trekked across the plains in covered wagons. The U.S. Army was still engaged in putting down Indian uprisings in some parts of the West. Some vast areas still awaited human settlement.

The natural resources of North America, which had seemed almost unlimited, were bleeding from many wounds. Wildlife was being pushed farther and farther from the settled areas. Forests had been stripped and streams muddied by ruthless cutting of timber. Men in high places were crying out against the waste and exploitation.

Early in the first decade of the century there was in the White House a President who personified the rugged outdoor life. Theodore Roosevelt had become a national hero as a result of the exploits of his Rough Riders in the Spanish-American War. He had lived outdoors in the West and learned to love it.

There was a growing agitation to preserve our natural resources. Joining in the campaign were men of influence like Gifford Pinchot. The Nation was ready for a program that would have as one of its objectives the training of boys in conservation practices.

It is evident that not only in America, but in other parts of the world as well, there was the proper climate to encourage the growth of a boys' movement headed toward the open spaces. Indeed, before the appearance of the Boy Scout program as outlined by Lt. Gen. Robert S. S. Baden-Powell, of the British Army, there were other active programs flourishing in various countries not unlike the scout idea.

In America, for example, two artist-writers were producing books about the out of

doors and both had ideas of organizations for boys. Ernest Thompson Seton had achieved wide popularity just after the turn of the century with his books. The "Two Little Savages" and "Rolie in the Woods" were widely read by boys. He had also outlined an organization which he called "The Tribe of Woodcraft Indians." As early as 1901 he wrote a handbook for this organization which he titled "The Birchbark Roll."

The other artist-writer was Daniel Carter Beard, a truly romantic figure who was recognized as an outdoorsman by men and boys alike shortly after 1900. Dan Beard, as he was affectionately known, was an artist of great distinction, friend of Mark Twain and popular writer. In 1905 he organized the Society of the Sons of Daniel Boone, and wrote a handbook which he called "The Boy Pioneers." He also outlined local organizations of boys with officers named after great American scouts.

Camping and hiking, both of which are an important part of the Scout program, were growing in popularity before 1910. The YMCA had an active boys' division by this time and was operating no fewer than 400 summer camps which reached a total of 15,000 youngsters. The first of these, Camp Dudley, was organized in 1884.

In Europe, too, there were interesting developments that antedated the Boy Scout movement. The Boys' Brigade, for example, was said to have had 54,000 members in 1905 and during that year Baden-Powell reviewed 17,000 of them in Glasgow, Scotland. Later, the leader of this movement strongly endorsed Scouting.

The Boy Scout program as conceived by Baden-Powell grew out of a plan he developed to train young men in the British colonial forces. As a commander in these forces he recognized early the need for instruction in some of the fundamental and even primitive methods of survival away from the base of operations. The young men who came into the army from the towns and cities of England were woefully lacking in self-reliance and skills of woodcraft.

Drawing upon a variety of sources, Baden-Powell set up a series of skills, graduated in difficulty and designed to make of the individual a first-class scout * * * or one who could go out on his own and secure information. As candidates passed these tests they were given insignia to indicate the degree of skill they had acquired.

So successful was this plan that Baden-Powell prepared a manuscript, "Aids to Scouting," which was designed for use with the armed forces. The proofs of this book were corrected in 1899 during the siege of Mafeking in the Boer War. During this siege boys were organized as runners and trained in some of the skills outlined for army scouts. The success of this training among boys must have made an impression upon their organizer.

The successful resistance to the Mafeking siege made an international hero out of Baden-Powell, and this had a great deal to do with the later success of the scout movement. When he returned to England he found, much to his surprise, that "Aids to Scouting" was being widely used as a handbook by groups of boys, with or without adult leadership.

In view of this, he was urged to prepare a book for boys and to outline a program for them. Drawing freely upon a variety of sources, including Ernest Thompson Seton and Dan Beard, he wrote "Scouting for Boys" but did not publish it until he had formed an experimental troop and camped with them at Brownsea Island in August 1907.

The desire to be self-sufficient is almost universal, and the scout program was designed to encourage this desire with a graduated series of steps leading toward it. Add to this an attractive uniform with insignia to advertise the level of proficiency and you

have a combination that is hard to beat. In addition, however, is one other factor—and an important one—the idea of the patrol.

There is a tendency for adolescents and preadolescents to form into gangs. Association with one's peers is a vital necessity at this age. By recognizing this tendency and giving it a direction, Baden-Powell made it a very easy and natural transition from the street gang to the Boy Scout patrol and troop.

Another thing that contributed to the rapid growth of the movement in America is the policy of institutional sponsorship for Scout groups. Under this plan every troop is affiliated with a church, school, service club or some other adult group. This insures continuity of leadership and a meeting place. To these institutions also, Scouting provides a ready-made program for restless boys.

That the Boy Scout program gained almost immediate popularity and continued to enjoy it for over 50 years is a tribute to the genius of Baden-Powell and the energy and resourcefulness of those who have followed him.

Librarians report that books about the out-of-doors are gaining in popularity. Churches, service clubs and schools are including out-of-door experiences as a regular part of their programs. A number of school systems now own and operate camps to which youngsters go for extended periods with their own teachers during the school year. New Jersey has several examples of this. Nearly every State in the Union has at least one such program.

Scores of teacher colleges own and operate camps to train teachers in out-of-door education techniques. National Camp, near Matamoras, Pa., is operated by the Outdoor Education Association. Here courses are offered during the summer for church leaders, teachers and school administrators to instruct them in the philosophy and techniques of education away from the classroom. This program has been in operation for 20 years.

New Jersey now operates a similar training center. Located in Stokes State Forest, this center is used by local school systems for class groups going to the woods with their own teachers during school time. The demand is so great that only a small number of the requests for the facilities can be granted.

In addition to accommodating public school groups the camp facilities are used 9 months of the year by the six State colleges. Both undergraduate and graduate students go there for periods from 1 to 6 weeks and take credit-bearing courses in field science, geology, conservation, rural sociology and similar subjects.

The climate is just as favorable today as it was in 1910 for organized programs that take youth into the woods and away from the artificialities of city life.

As the highways become more crowded, cities larger and more complicated and the restlessness of youth finds expression in antisocial activities there is even more need today for the Baden-Powell idea which grew into the greatest youth movement of all time.

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. HOSMER. Mr. Speaker, the following is one of the Ben Zinser articles in the Long Beach Independent

Press-Telegram on extravagant promotion by the drug industry resulting in higher prices to consumers which was referred to me in my remarks on the floor today under the above title:

BIGGEST MEDICINE SHOW ON EARTH—DRUG FIRMS BRIEF DOCTORS

(By Ben Zinser)

The young man in the dark gray business suit had scarcely seated himself in the doctor's waiting room when the receptionist said:

"Doctor will see you now."

Picking up a valise, the crew-cut visitor strode briskly past a waiting line of patients into the doctor's office. The doctor, feet on desk, was waiting.

"Bad day, so let's hurry," the doctor said.

Opening his sample case, the visitor plunked several small vials into the desk.

"It's our new one—Supercetin," the young man said. "Knocks hell out of staph."

"Any contraindications?"

"None as yet."

"OK, go ahead and detail me."

The young man, known as a detail man in the pharmaceutical industry, proceeded to outline the dosage schedule for his new antibiotic, its chemical structure and its possible undesirable side effects. The entire visit took about 10 minutes. Average cost to the drug industry for such a visit: \$12.

All over the land this scene is enacted daily in doctors' offices. About 20,000 detail men are employed by the U.S. pharmaceutical industry to brief the medical profession on its products. The average physician sees about five detail men each week. (Note: Some doctors, however, refuse to talk to any.)

Although the pharmaceutical industry will spend about \$190 million this year on research to find new and better medications, it will put out between \$250 and \$300 million to keep the physician informed about existing drug products. Almost half of this amount will go to finance detail men.

This is a report to you on the drug industry's private advertising campaign—the biggest medicine show on earth. Despite the size of the campaign, its audience is limited. The multimillion dollar prescription-drug pitch is restricted to your physician.

Most doctors believe this intense promotional campaign is one of the major factors that make drugs costly to their patients.

The drug industry, however, contends that mass production of medicines would not be possible without heavy advertising. Drug costs to the patient would be enormous were it not for mass production, industry spokesmen say.

The typical detail man does not have a medical degree. He does have a college degree and a good background in scientific subjects. And, insist the detail men, "we are not salesmen."

"A drug salesman," detail men explain, "is the man who represents 'bathtub' or 'me too' houses."

A "bathtub" house is a pharmaceutical firm that doesn't do medical research.

"These firms buy the prescription product from another outfit and put their own label on it," says a detail man. "Sometimes the product is inferior."

A detail man explains:

"For instance, say we have a pep pill called Antisnooze. Our plant comes up with a substandard batch—one that won't meet our advertising claims for potency. So we sell this batch to a 'bathtub' house which promptly labels it something else and pushes it in direct sales to the physician."

Even though detail men are costly to the drug industry, their future is bright. A survey conducted for the American Medical Association reveals that two-thirds of all doctors say detail men are their most important source of product information. About half

the doctors say they got the information which led to their prescribing their last new drug from the detail men.

When detail men aren't knocking at doctors' doors, the Nation's physicians are hearing constantly from the drug industry through the pages of medical journals. The drug manufacturers are the journals' main advertisers. The industry also rains a constant shower of direct-mail advertising onto the doctor's desk.

The AMA survey reveals that doctors have mixed emotions about the drug companies. Some findings:

More than two-thirds of all doctors think that pharmaceutical advertising increases drug prices.

Nearly a third of the doctors think that 50 percent or more of the money spent on pharmaceutical advertising is wasted.

One-fourth of the doctors think that the drug manufacturers make too much profit. (Yet half cannot even guess what percent of profit on sales the industry makes.)

Half the doctors think that the drug companies are overly competitive in their marketing and promotion.

Only one-fourth of the doctors think the drug industry is more interested in helping the physician than in making money.

On the other hand, doctors almost unanimously think that drug company promotion and advertising make an important contribution to the postgraduate education of physicians.

"The price of medical journals would be prohibitive if they had to be published without advertising revenue," one Long Beach physician comments.

One of the biggest critics of the pharmaceutical industry is Dr. Louis Lasagna, head of clinical pharmacology at Johns Hopkins University. He says that some drug-industry advertising is downright sleazy.

Some of his objections:

"Badly scissored quotes." Too often, he says, drug advertisers cite only those parts of medical manuscripts that laud a product, deleting the less favorable comments.

"Pharmaceutical numbers racket." Physicians are told, for example, that a new compound is more potent than an older drug because only 10 milligram dosages are required compared to 100 milligrams for the old. What is usually meant, he says, is that both drugs do the same job at the respective dosages. Watch those numbers, he warns his colleagues.

"Reprint articles." Drug houses circulate thousands of reprints of medical journal articles, and this practice is putting the doctor-author on the spot.

**EXTENSION OF REMARKS
OF**

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. HOSMER. Mr. Speaker, the following is one of the Ben Zinser articles in the Long Beach Independent Press-Telegram on extravagant promotion by the drug industry resulting in higher prices to consumers which was referred to in my remarks on the floor today under the above title:

ALL ADS TO PROMOTION COSTS—SAME DRUG, ONLY THE NAME IS DIFFERENT

(By Ben Zinser)

In a recent medical journal the first advertisement in the magazine regales the

physician-reader about the advantages of a diuretic drug called Esidrix.

On the very next page appears an ad praising another diuretic called Oretic.

The coincidence: Each is the same drug. Esidrix is the Ciba Co.'s trade name for the drug hydrochlorothiazide. Oretic is Abbott Laboratories' trademark for hydrochlorothiazide. Chemically both drugs are the same. Furthermore, Merck Sharp & Dohme sells the same preparation under the name Hydrodiuril.

Another example in the same issue of the journal: One ad tells of Decadron, marketed by Merck Sharp & Dohme. Another promotes Gammacorten, sold by Ciba. Yet both are the same drug—an anti-inflammation hormone known as dexamethasone.

Still another example: The tranquilizer Miltown and the tranquilizer Equanil, often advertised in the same issue of a medical journal, are one and the same: meprobamate. But Wallace Laboratories sells Miltown; the Wyeth Co., Equanil.

And so it goes. The antibiotic tetracycline, for instance, is marketed by different firms under the trade names of Achromycin (Lederle), Pammycin (Upjohn), Polycycline (Bristol), Steclin (Squibb), and Tetracyclin (Pfizer.)

What with hundreds of drugs offered for prescription, you can readily see the advertising bill involved. Some 5,000 medical journals appear annually in the United States, and most have columns that make a promotional pitch to the doctor-reader.

The confusing thing is that one firm usually has a patent on any one of the new drugs.

One company will patent Superdrug and immediately license another drug company to market the same compound under another name, say Duperdrug.

So here are two firms spending money—and freely—to get the doctor's attention. One ad says, "Prescribe Superdrug." The other insists, "Designate Duperdrug."

The question: Who pays in the long run?

Furthermore, another cost that is undoubtedly passed on to the consumer is that prompted by the mere existence of the same drug under different trade names. The retail druggist must stock all of them. Under penalty of law he cannot make a substitution. If the doctor prescribes Aristocort, the druggist cannot substitute Kenacort—even though both are the synthetic hormone, triamcinolone. Both must be kept on the shelves.

Advertising is a necessity, the drug industry insists. A recent survey shows that although 37 percent of doctors first learn of new drugs through drug company detail men, most doctors are persuaded to try new drugs by journal advertisements or articles.

The survey discloses that few doctors are influenced by the detail man in their continued use of a drug. But nearly 40 percent say journal advertising is an important factor in deciding to keep using a certain preparation.

There are now almost two dozen advertising agencies that specialize in promotion of ethical (prescription only) drugs. Some have staffs ranging from 50 to 250 persons, including several physicians, as consultants.

Launching a new drug can be extremely expensive. When the antibiotic Aureomycin was introduced, its manufacturer mailed out \$2 million worth of samples to more than 140,000 physicians, according to one drug-industry biographer. Research and development of Terramycin cost about \$4 million, but the first 2 years Terramycin was on the market, the manufacturer reportedly spent \$7½ million in advertising and promotion.

Many drug firms resort to "gimmick" advertising. One drug house sent red golf balls to doctors. Reason: It had a large red

cold pill on the market. The golf ball is supposed to remind the doctor of the pill.

Another has mailed out mounted butterflies, comparing them to an antibiotic and saying both are unique in nature.

Pharmaceutical houses have swamped doctors with fountain pens, desk calendars, desk decorations (example: miniature skeletons), and even pencils attached to tiny bedside urinals.

But even the "gimmicks" can be too "gimmicky," the industry admits. Thomas M. Rauch, vice president of the marketing division of Smith Kline & French Laboratories, recently told Los Angeles County physicians in their association magazine how S.K. & F. spiked one promotion idea.

"Someone had a wonderful idea for a mailing on Cytomel, which is our synthetic, thyroid-like product," he said. "The mailing was to be on Cytomel's use in infertility, and our people came up with the bright idea of the sample being enclosed in a facsimile egg."

"There is no doubt in my mind this would have been an attention-getter which would have increased Cytomel's sales significantly. But in the opinion of our advertising people and others—and I certainly agree with them—this mailing, on the basis of good taste, was too tricky, too smart, too undignified."

"It was never sent out."

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. HOSMER. Mr. Speaker, the following is one of the Ben Zinser articles in the Long Beach Independent Press-Telegram on extravagant promotion by the drug industry resulting in higher prices to consumers which was referred to in my remarks on the floor today under the above title:

DRUG ADS PLAGUE DOCTORS—SAID HIKING
PRODUCT COSTS
(By Ben Zinser)

The average doctor in the United States receives more than 50 pieces of advertising mail each week from pharmaceutical companies.

That figure—"more than 50"—is the finding of a survey conducted by Ben Gaffin & Associates, Inc., of Chicago, for the American Medical Association.

Purpose of mailing: To attempt to get your doctor to write a certain trade name on his prescription blank when it comes time to order medication for his patient.

Estimated cost per mailing to each physician: 10 cents.

It all adds up when you remember that the manufacturers of ethical (prescription) drugs aim their promotion at more than 100,000 physicians.

The AMA survey infers that much of this type of advertising is money down the drain.

Reports the survey:

"Nearly two-thirds of all doctors say that half of this direct mail is for types of products that are as unrelated to their practice as eyewash is to the practice of an orthopedic surgeon."

Only 15 percent of the Nation's doctors read all of their advertising mail. Another 15 percent refuse to look at any of it.

One Long Beach physician became so enraged at the glut of mail that he wrote each major drug manufacturer asking to be taken off its mailing list.

Some of the direct mail, however, is helpful. Especially popular are Ciba's "Medical News" and Upjohn's "Scope Weekly." These are medical newspapers offering more up-to-date information than most medical journals; the journals have a time lag of weeks to months between acceptance of articles and publication.

Among other high-class publications mailed to doctors are "What's New?" (Abbott Laboratories), "Pictoclinic" (Ames Co.), "Review of Nutrition" (Borden Co.), "Rheumatology Reviews" (Geigy), "Image" (Hoffman-LaRoche), "Physician's Bulletin" (Lilly), "Diuretic Review" (Lakeside), "Seminar Reports" (Merck Sharp & Dohme), "Therapeutic Notes" (Parke, Davis), "Spectrum" (Pfizer), "Science Bulletin" (Schering), "World-Wide Abstracts" (Warner-Chilcott).

Despite the objections by many doctors to advertising mail, the drug industry believes that such advertising helps sales.

"We measure physician reaction in dollars and cents," says Thomas M. Rauch, vice president of the marketing division of Smith, Kline & French Laboratories. "For 15 years we have tested different types of campaigns to evaluate their effectiveness."

"For example," he says, "on one of our products we sent out four sample mailings in a year. Then we wondered what would happen if we doubled the number of mailings. Would this merely increase our advertising expenditures and have no effect on use? Or would the additional sample mailings transmit enough information to the physician to increase his prescribing of our product?"

Rauch's finding:

"We tried it and found we had a net increase in sales of 40 percent by the end of the fourth year."

The firm experimented further. Next it doubled the number of sample mailings. Finding: 16 samples produced no increased use over the 8-sample results.

Promotion of prescription drugs isn't limited only to company detail men, journal advertising and direct mail programs.

Some pharmaceutical firms give luncheons and cocktail parties at medical conventions. They set up elaborate display booths at the conventions. They pay a doctor's expenses to tour their plant. They purchase prizes for doctors' golf tournaments.

All these events seem to be free. But are they?

Dr. William B. Bean, of the University of Iowa Medical School, recently commented in the AMA Archives of Internal Medicine:

"These cocktail parties and lavish dinners are supported by increasing the cost our patients pay for drugs."

Some doctors think another unnecessary expense is that resulting from too many drugs—literally—on the market.

"A company will bring out a drug called Bigshow," one doctor complains, "and before you're detailed on it they'll alter a chemical bond in the drug and start promoting its chemical relative under a new trade name, like Reallybigshow. The whole thing is ridiculous."

Meanwhile, the drug industry points to the scientific closed-circuit television programs it sponsors, to the technical motion pictures it produces. These services have a definite educational value for the physician, the industry argues.

And what about the free drug samples it distributes? What about the research it sponsors? What, in short, would the doctors do without the drug houses?

But it's still the patient who takes the pill—and what a bitter one it is, what with

the drug industry spending much more on advertising than it does on medical research.

The answer: Perhaps another National Institute of Health—say a National Institute of Pharmaceuticals. Creation of another U.S. Public Health Service agency such as this might be the solution. The agency could regulate—to a degree—the manufacture of prescription drugs. For one thing, it could eliminate the multiplicity of drugs that now exists—a multiplicity that is proving costly to the patient.

There is no reason why regulation could not be achieved without endangering the profit potential of the individual drug manufacturer.

Other possible improvements: The corporate tax bite of drug company income could be reduced so the companies would not have to advertise at full tilt.

The consumer should be relieved of paying tax on "necessity" drugs.

It's had enough to have to take a pill. If only the pill could be sweetened somewhat.

Twentieth Anniversary of the Franklin Square Bulletin

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. DEROUNIAN. Mr. Speaker, in recognition of real achievement, it is my pleasure to insert the following in the Appendix of the Record:

TWENTIETH ANNIVERSARY OF THE FRANKLIN SQUARE BULLETIN

In February 1940, when Jim O'Neill was 15 years old, he told his dad that Franklin Square, N.Y., was big enough for a newspaper of its own. John J. O'Neill, who had given over 20 years of work to the progress of Franklin Square, agreed, but with the provision that the merchants of the community must be consulted. A canvass of the town followed and the decision to found a local paper was made. Shortly thereafter, on March 14, 1940, the first issue of the Franklin Square Bulletin appeared and in these 20 years it has never missed an issue.

Jim O'Neill is a prominent Nassau County newspaperman, today. Mrs. Margaret O'Neill, wife of Publisher John J. O'Neill, in addition to serving as society editor, has contributed to the Franklin Square Bulletin each week a column dealing with the newly published books available at the local public library.

The Franklin Square Bulletin has held to its early decision never to print a word of sensational news or anything that might hurt or offend any person. It has remained independent in its views, although it supports the policies of the county and town administrations, in the operation of the largest and fastest growing communities in the Nation.

Last week's edition marked the start of the 21st year of publication. When it reached the newsstands a flood of congratulatory messages was received by Mr. O'Neill. They came from the many friends the Franklin Square Bulletin has made over these 20 years and I know the sender of each message feels as I do, that here is a fine little newspaper representing honesty and decency. I am very proud of it, proud of the O'Neills, and proud of Franklin Square, whose history has been recorded in the pages of the Bulletin. My congratulations to those who made this paper a reality and to the many people who have supported it.

What Loyalty Day Means to Me

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hon. James A. Farley which appeared in the March issue of the Veterans of Foreign Wars magazine.

WHAT LOYALTY DAY MEANS TO ME

(By James A. Farley)

(EDITOR'S NOTE.—Jim Farley, because of his integrity, ability, and abiding respect for American principles, has been described as the ideal public official. Born in Grassy Point, N.Y., in 1888, he began his political career at the grassroots bottom as town clerk. He is remembered politically for the decade, 1930-40, when he served as Postmaster General of the United States and, concurrently, as chairman of the Democratic National Committee (1932-40). Since 1940 he has been chairman of the board of the vast Coca Cola Export Corp.)

After more than 175 years as a nation, the newness and shine of this continent are still on it. But nowhere in the world is there a deeper feeling of one-with-country than in these United States of America.

What is it that makes 180 million people stand as a unit in loyal—and sometimes tear stained—salute? Not just the knowledge that giants like Washington, Lincoln, and Jefferson have been the ancestors of our traditions—heroes who make you eager to be counted as a descendant, if not by blood at least by brotherhood and purpose. Not just the memory that several frightful wars and countless brave men have blended us together with the soil of our country. Not just the thought that famine and drought are minimal, that forests are filled, that nowhere in this wide country of ours must one man starve because another man cannot give him bread. Not just because the soil has been kind even when the elements have been mighty or terrible. It's because of all these things, and more, that our people are bound together in timeless loyalty.

Loyalty is not some special wonder that is added to a man. It is part of a man—if he is a man. Loyalty is no passive thing. It is day-by-day living, in brotherhood and industry, so that the country of our birth, the friends of our choice, the progeny of our blood may live in simple freedom.

America is a melting pot of many colors, many sizes, many shapes, many beliefs, but it is hard to find here an honorable man who is not one with his flag, however quietly.

It is seldom that we are asked to rise and be counted, but sometimes a declaration of feeling impresses even the declarer with his own message. That's why expressing what Loyalty Day means is a privilege, and one more opportunity for me in this land of endless chances.

To this country that has given me much, I can return many tangible things—but nothing that will count more than the loyalty I feel and, I hope, show. The forces that oppose us are loud and persistent. A low whisper or mental agreement is no answer to the relentless crusade of communism. We must actively support every project that brings us nearer to security of freedom in our time.

The men who are the stewards of government at every level must know they have

the cushion and support of citizens to accomplish their objectives for the citizens. They must know that we feel what they feel in their desire to keep this country free—and its people secure.

You can't feel loyalty until you know what you are loyal to—so it would seem to be a particular duty of every American to know what is happening around him, to participate at the local level in school, civic, and church programs, to voice his favor or dissent before things go beyond control to produce a generation of errors. And, out of this participation, grows a particular kind of loyalty that welds together—not only men to their country—but men to men in a true brotherhood that defies division.

Missile Age Demands on America's Merchant Marine

EXTENSION OF REMARKS

OF

HON. THOMAS N. DOWNING

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. DOWNING. Mr. Speaker, on March 15, 1960, Mr. Tom Killefer, executive director of the Committee of American Steamship Lines, delivered a speech which I think should be read by every Member of Congress. In his speech Mr. Killefer outlines several courses of action which could be taken by Government and industry to increase American exports and shipments on American-flag vessels.

These proposals have been very well received and extensively quoted in much of the maritime press.

The speech follows:

MISSILE AGE DEMANDS ON AMERICA'S MERCHANT MARINE

(By Tom Killefer, executive director, Committee of American Steamship Lines, before the Foreign Trade Bureau, Chamber of Commerce, Cedar Rapids, Iowa, March 15, 1960)

Tonight I should like you to consider for a moment two new rapidly developing problems in this foreign trade area, problems caused by the demands placed on us by the missile age. And then I should like to suggest at least the beginnings of a solution for them.

The first of these is the challenge of the new Soviet merchant marine, designed, as Premier Khrushchev put it, to "bury us" economically.

The second is the increasing tendency of American exports and imports to move in foreign ships, rather than by our own merchant fleet.

These problems are both economic and political. They are tied in with the whole bundle of our national policies; Buy American, foreign trade, aid to underdeveloped countries, and so on. We either face up to their challenge or we will end up a second-class power. And when you are competing with the Soviets, second is not good enough—this is no Winter Olympics—it is our struggle for survival.

The Russian leaders recognize that the Achilles heel of the West lies in the sea. They evaluate power problems of the next decade and realize, with greater clarity perhaps than our own Government has done to date, that the sea is the key to world power in the nuclear age, as it was in the day of Nelson.

According to the latest edition of "Jane's Fighting Ships," Russia is fashioning a combined merchant marine—Navy, capable of denying the United States and Great Britain control of the seas. "In particular," writes Editor Raymond Blackman, "the Soviet Union's 500 submarines represent a formidable threat to the allied control of the seas, and they could wreak havoc on the 25 million tons of American and 20 million tons of British shipping."

Already, as a seapower, the Soviet Union is second only to the United States, now having replaced Great Britain, our traditional guardian of the seas.

But, Russia's military might may not be the real threat. Maybe we can't see the sea for the seaweed. My point is that it is on the economic front where the war for survival rages—and right now. A recent merchant marine study headed by Adm. Arthur W. Radford, former Chairman, Joint Chiefs of Staff, concludes that "the most serious threat during the next 15 years is expected to be the political-economic war in which the military services are not directly involved." The report goes on to urge that we have a strong U.S. controlled merchant marine "as a means of exerting positive economic pressure against the Sino-Soviet bloc."

Here are some reasons why:

The Soviet merchant marine has shown steady and impressive growth in recent months. It now amounts to about 800 merchant ships. By the end of this year, 1960, the combined Communist bloc fleets will probably total over 6 million deadweight tons, of which over 4 million tons will be under the Soviet flag; another million tons under satellite flags, mostly Polish, and the rest under the flag of Communist China. If the experts are right, the Communist bloc merchant fleet will more than triple in size in the next decade or so.

The numbers of Soviet ships trading with Central and South America, Southeast Asia, north Africa and the Middle East are increasing. The Russians have delivered merchant ships to underdeveloped areas and provided the crews to man them. Their Merchant Marine Minister Viktor Bakaev said a few weeks ago that Red-flag merchant vessels in 1958 had hauled cargo to more than 60 countries, touching as many as 500 foreign ports.

The U.S.S.R. has already entered into 36 trade agreements, the most recent a vast trade pact with Prime Minister Fidel Castro, making the Soviet Union Cuba's second largest customer behind the United States. This assures Russia of a firm foothold in the critical Caribbean area from which it may be able to extend its penetration into the rest of Latin America.

The ship-led economic offensive can produce circumstances under which the Sino-Soviet bloc would seriously disrupt ocean commerce in selected areas. By concentrating shipping on a few trade routes, the Communists could haul free world cargo at less than compensatory rates and drive out their Western competitors.

How can the United States meet this economic attack?

We can do it best through a fast, front-line American merchant marine. The members of our committee are meeting the challenge head on. In the next decade or so these companies will replace nearly 300 World War II built ships, at a cost of \$4.6 billion. Already four new passenger ships representing a \$100 million investment are in the Caribbean and South American service and 41 freighters have been launched or contracted for under the program. These ships are the last word in marine design, in fast and efficient cargo handling, in safety and navigational aids. New technological advances are being incorporated as soon as

they become tested and commercially feasible.

The 14 privately-owned lines of our committee operate under Government contracts obligating them to give regular and frequent worldwide service on essential trade routes. They are required to man with American crews, buy American supplies, repair and replace their ships in American shipyards. In return, the Government agrees to make up the difference on certain items of operating cost, mainly wages—the differential between cost of wages paid to American seamen and those paid to crews on ships of our foreign competitors.

This operating subsidy puts us on a parity with the foreigner as to these costs, but it does not guarantee a profit. It is no substitute for cargo. American ships, like their foreign competitors, must move freight and passengers to live, and this brings me to the second problem we face.

Our exporters and importers generally, are interested first in buying and selling, and only second in the nationality of vessels moving their goods. So long as U.S. products are sold abroad in volume, and the level of foreign goods imported into the United States remains high, at reasonable freight rates and compensatory prices, to the freight agent and to the manufacturer, business is good. Our businessmen have no compulsion or suggestion or Government pressure placed on them to designate vessels of American registry. If the foreign buyer or consignee specifies a foreign-flag line to move our goods, why shouldn't the American seller comply with the request? And he does. And the goods move abroad on foreign ships. Similarly, when we buy goods abroad, the foreign seller traditionally selected the ocean carrier—and traditionally it is a foreign carrier. There may even be pressure, direct or indirect, brought on the foreign seller to designate ships of his own nationality. And these ships may be controlled by his government, in lesser or greater degree.

The net result is patent. Whether the goods move in the export or in the import trade, although American and foreign freight rates are generally the same, there is a strong tendency for cargoes to move on foreign vessels. This is true historically and it continues to be true today, to the substantial detriment of American lines.

Operating subsidy does not touch this problem. It is no answer to the American shipowner that his higher wage costs are equated with those of his foreign competitor. He must have cargoes to survive.

Somehow this pattern must be broken away from our foreign trade. In some way the American freight agent must be helped to increase his control over the routing of traffic and to move an adequate share over American-flag lines, or the American merchant marine will continue to dwindle in size and importance on the international scene.

The problem is acute and it is urgent. In 1958 American-flag ships carried 14 percent of our oceanborne foreign commerce, and this dropped during 1959 to less than 11 percent. This compares to 28 percent in 1936 when the Merchant Marine Act, the charter of our modern shipping programs, was enacted.

The objectives of the act were and are to develop and maintain a merchant marine owned and operated by American citizens, with American crews, adequate to carry a substantial portion of our waterborne foreign commerce and to be available for the national defense. We should be lifting, at minimum, 50 percent of our foreign commerce, a figure consistent with Government policy.

How are we to carry out these objectives and policies, in the face of this adverse trend in our foreign commerce and the economic threat of the Soviet merchant navy? Before

suggesting a solution, let me touch on one more facet of the same situation.

The balance-of-payments problem for several months has been preoccupying the minds of Americans interested in foreign trade. The President of the United States in his recent state of the Union message expressed concern over what he terms, "the strain on our international balance of payments."

So much prominence has been given to this factor in our foreign trade and defense policy that it deserves an appraisal in relation to our merchant marine.

In 1959 American-flag vessels either earned or avoided disbursement in foreign exchange balances of, roughly, \$1 billion.

Putting it in simple terms, this means that if there had been no American merchant marine last year, the balance of payments deficit would have been about \$5 billion, instead of \$4 billion. This \$1 billion amount is a significant contribution to our intangible national exports, one that can become of increasing importance and impact over the coming years. It could be a real help to us in avoiding an acutely unfavorable balance of trade that might result in devaluation of the dollar.

Two beneficial moves we can make, among others, to knock out the sizeable deficit in our total foreign payments, are to expand our exports, and to increase the proportion of our export-import traffic moving on American ships. The more American shippers specify that their export and import cargoes and passengers go American, the more the deficit will be reduced.

This brings us back to the objectives of the Merchant Marine Act. What can be done to increase carryings on American-flag ships and assure them of a "substantial portion of our foreign commerce"?

The solution lies in a section of the law that, curiously enough, has never been acted upon by the Maritime Administration. It is explicit enough to permit the Maritime Administrator to take key steps to reverse the trend of foreign-flag preference and help bring more cargoes to American ships.

Section 212 of the act authorizes and directs the Administrator "to study and to cooperate with owners in devising means by which the importers and exporters of the United States can be induced to give preference to vessels under U.S. registry." It also directs the Administrator to maintain "liaison with such other boards, commissions, independent establishments and departments of the U.S. Government, and with such representative trade organizations concerned with any movement of commodities in the waterborne export and import foreign commerce of the United States, for the purpose of securing preference to vessels of U.S. registry in the shipment of such commodities."

Here is a crystal-clear mandate to act so as to resolve the problems we have outlined tonight. Yet this law has never received any attention. No action, no study, no liaison with Government agencies or trade organizations.

Congress clearly foresaw the problem and provided the machinery for its solution. Now is the time for the Maritime Administrator to carry out the mandate, to set up machinery by which exporters and importers can be approached and urged to use American ships in the carriage of their cargoes and passengers. It is in the national interest that that activity be increased in this area, and that the Department of Commerce, the Maritime Administration, and other interested Government agencies promptly undertake the necessary planning and programing, to be followed up by specific action, as originally contemplated by Congress.

A current national theme is "Buy American." Let's have another theme, "Ship American" or "Go American."

Once we can impress upon our citizens the importance, and the national interest involved, in asking that their goods and passengers travel by American ship, we will be well on our way to what our foreign competitors have been achieving all along—the carriage of a substantial portion of our own foreign commerce in our own ships.

We must have a modern American-flag fleet in peacetime, to maintain reliable access to our foreign markets—and to needed sources of raw materials.

The United States cannot expect foreign maritime nations to provide American shippers, in an economic crisis, with the same reliable service they give their own nationals—particularly if those nations covet the same customers also served by our shippers. So long as America retains an effective fleet of its own it can stave off discriminatory practices. Without such a fleet we would be at the mercy of foreign maritime powers. They would not hesitate to use their fleets to further their own world trade aspirations, and ultimately send our freight rates soaring.

Today, more than ever, our merchant shipping is an essential instrument of national policy. It serves the entire country, inland as well as coastal, by moving oceanborne goods that strengthen our domestic economy. It forges ties of trade that bind us economically and politically to the free world nations. And it is ready to move and supply fighting national defense forces if need be.

The words still ring true today, as they did in another age of desperate world struggle: "He who would be secure at home must be supreme at sea."

Action Voted March 17, 1960, by the Simpson College (Iowa) Faculty Concerning the National Defense Student Loan Fund

EXTENSION OF REMARKS OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. SCHWENGEL. Mr. Speaker, under leave to extend my remarks, I wish to call attention to a report on action taken by the faculty of Simpson College at Indianola, Iowa, urging Congress to delete the disclaimer affidavit in the National Defense Education Act:

ACTION VOTED MARCH 17, 1960, BY THE SIMPSON COLLEGE FACULTY CONCERNING THE NATIONAL DEFENSE STUDENT LOAN FUND

For significant reasons that have been frequently enunciated, the faculty of Simpson College hereby formally registers its official concern about and opposition to the affidavit required of all students who qualify to secure national defense loans for educational purposes. We are deeply opposed to the affidavit as contrary to the American spirit and the spirit of research and learning as well as because it is discriminatory. At the same time, we wish to express our deep appreciation for the exceedingly valuable action of the Federal Government in making such useful loans available to students in order to foster the indispensable values of expensive and intensive higher education for the young people of our Nation.

While encouraging the elimination of the affidavit, we want at the same time to indicate our strong support of the national de-

fense student loan program and our desire at this time to continue to participate in it in order that scores of needy and often promising students and the Nation as a whole may secure the benefits of this far-sighted loan program. We continue for the present in the loan program because we think that each individual student is entitled to make his own decision concerning his personal participation.

It is nevertheless our strong hope that the Members of this Congress will support the deletion of the affidavit requirement.

The Scandal of Unemployment Compensation

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mrs. ST. GEORGE. Mr. Speaker, the following article appeared in the Reader's Digest for April.

I am afraid that the article is quite factual as its author, Mr. Kenneth O. Gilmore, spent over a year studying the problem and uncovering the mess.

Mr. Speaker, this sort of thing is an outrage against our law-abiding, honest, taxpaying citizens. The situation will grow worse instead of better unless strong measures are adopted to plug up the many loopholes that make these abuses possible.

The article follows:

THE SCANDAL OF UNEMPLOYMENT COMPENSATION

(By Kenneth O. Gilmore)

In July 1957 a 65-year-old man bade a last farewell to colleagues at an industrial plant in Pittsburgh. His long career completed, he looked forward to a leisurely retirement, well-fixed with a monthly \$188 pension from his company, an \$1,800-a-year slice of a deferred profit-sharing plan, plus his regular social security pension checks. Yet immediately he registered as a job seeker at the local U.S. unemployment office, knowing full well that nothing would be available to him as long as younger men were seeking work in his specialty.

During the next 7 months this man picked up \$35 every week without doing a lick of work. Then, after a wait, he automatically qualified for another effortless \$33 a week for 30 more weeks. It added up to over \$2,000, all tax free, and all in addition to his regular retirement income.

This is not an isolated case. Despite crude attempts of Federal authorities to cover up and conceal, the fact cannot be hidden that today our unemployment-compensation apparatus is in horrible disrepair. The solid planks on which it was built years ago have been so warped by the pressures of our growing welfare bureaucracy that hundreds of millions of dollars are being wasted on loafers, quitters, honeymooners, schemers, parasites and a host of others for whom it was never intended.

When Congress enacted social security legislation 25 years ago, requiring every State to set up basic unemployment compensation laws, the objectives were straightforward and simple. To qualify, unemployed workers had to be "ready, willing, and able to work." Benefits were to go to legitimate wage earners who had clearly lost jobs

through no fault of their own, to tide them over until they could find employment.

The collapse of these standards is shocking. All types of freeloaders have joined the unemployment-aid roster:

In Wisconsin, a mine-hoist operator demanded sick leave for arthritis, only to go touring country fairs as a sulky-driver in harness races. Eight weeks later, when he showed up for work, he was fired for misconduct. At that point he applied for benefits, and it was finally ruled that his behavior should not prevent him from receiving compensation.

There's the girl who worked in a musical comedy in New York for about a year, then took a vacation in Miami. She stayed on as a nightclub dancer at \$100 a week for 6 weeks. When the show headed for Las Vegas, she quit and went back to New York. Her homecoming was sweetened with jobless aid.

After classes let out for the summer vacation, a Georgia schoolteacher who was paid by the year collected unemployment in North Carolina. He claimed that his monthly school checks were for work he had done in the school term.

In Hollywood, a 12-year-old child actor spurned parts as an extra paying up to \$28 a day, yet was declared eligible for unemployment benefits. Why? The youngster was accustomed to speaking roles at \$100 to \$150 a day, so lesser parts were beneath him.

These are recent, documented cases, summarized in bulletin form at the U.S. Department of Labor and distributed by the hundreds to keep State unemployment officials abreast of legal precedents. In every one of them, benefits were granted even though all the facts cited here were brought to the attention of authorities. They epitomize an untold number of instances in which unemployment protection has been stretched beyond belief.

The result is a multibillion-dollar colossus that continues to expand in all directions. Of the \$23 billion in jobless pay handed out during the past two decades, nearly half has been eaten up in just the last 5 years. In 1959 1 out of every 12 members of our civilian labor force collected an unemployment check.

Set up as a Federal-State insurance system, unemployment compensation has long been dominated by Federal officials bent on building up a Washington-run welfare apparatus. Along with their continual efforts to cut down the authority of the States, they have waged a relentless campaign—with bulletins, speeches, memorandums, letters, and a flood of statistics and literature—for larger, longer, and laxer benefit payments.

Under this pressure, benefit protection for four of every five workers has been boosted over 200 percent since the system began. In Connecticut, claimants can collect as much as \$1,742 over a half year; in California, \$1,430. People have been able to draw compensation for 40 or more weeks in 21 States, beyond 50 weeks in 7 States.

The money for all this comes directly from the 2 million employers who are taxed by each State according to the size of their payrolls. However, they must send in additional millions of dollars to the Federal Government, where it is appropriated to the U.S. Bureau of Employment Security (BES), a Federal supervisory agency within the Department of Labor. The BES then channels cash back to the States for their administrative expenses, retaining an average \$6 million a year for its own expenses. That's not the half of it, however. Every cent collected from employers may be impounded in Washington if States do not bow before BES and Federal rule, and employers may be penalized with a Federal tax that is 10 times greater.

Says Dr. Edison L. Bowers, professor of economics at Ohio State University and chairman of Ohio's Advisory Council on Unemployment Compensation, "We have been gradually approaching a complete Federal system by the back door—a system in which the State legislatures and the State administrators relinquish their rights and responsibilities in return for administrative funds."

In Pennsylvania, where many of the favorite BES concepts have been faithfully followed, legal problems have created an appalling mess. The official record there shows that workers who had retired on pensions were showered with \$20 million in unemployment payments during a 3-year period; and further, that in 4 years more than \$45 million had been squandered on persons who voluntarily quit work or were fired for misconduct. On top of that, a recent investigation by the State chamber of commerce revealed that in one 3-month period some \$2 million was given to students, pregnant women, retired and seasonal workers, and numerous borderline wage-earners.

In one city, for instance, 85 women, mostly housewives, work 8 months of the year at a factory that makes chocolate bunnies, chicks and eggs for the Easter season. In the spring the plant closes down for the summer. Since no other factories in the area have openings, these women can collect as much as 30 weeks' compensation. Many of them have accumulated enough wages to draw the maximum benefits. Result: a 4-month paid vacation.

One of the worst abuses in Pennsylvania is a scheme of benefit distribution whereby certain claimants can collect for two 30-week periods without lifting a finger in between. They draw the double bonus because of a loophole they have discovered in an extremely technical provision of the State law. Significantly, the chamber of commerce study disclosed that one-half of all benefits paid to these "double-dippers" goes to retired workers. Yet efforts to halt this practice have failed, and little headway has been made toward a cleanup.

Employers can contest benefit claims which they consider unjustified, but they have fared badly before administrative tribunals in Pennsylvania. In a recent 12-month period more than two-thirds of their appeals to referees and the board of review were turned down. Consider the case of an inspector in a plant handling defense work. Because he failed to check the measurements on an important machine, \$2,000 worth of material had to be scrapped. He was fired. Nevertheless, benefits were granted by a board of review even though the record showed that the inspector had been issued previous warnings by the company because of his carelessness.

Pennsylvania's unemployment finances are in a shambles. Last April it had to borrow \$96 million from Washington to keep from nose-diving into the red. In addition to that, it lapped up over \$80 million from a gigantic recession fund created by Congress in 1958. For 6 months every person on the rolls who had run through all his compensation hauled in an additional 15 weeks of benefits.

Contrast this situation with that in Ohio, a large industrial state like Pennsylvania. Last fall Ohio's unemployment fund stood at a solid \$407 million, without any loans from Washington. Nevertheless, Ohio's Bureau of Unemployment Compensation has been sharply criticized by the BES. Why? One complaint: Ohio should purge from its list a section which barred benefits to persons sent to jail or discharged from jobs for misconduct or dishonesty. Let 35 days roll by, said the BES, and then permit the dishonest person to collect aid. It reasoned that the average unemployed man in Ohio located a job in 5 weeks; therefore, why not grant

compensation to the jobless crook after that much time had elapsed? Somehow, by then his dishonesty would have no relation to his unemployment.

Such is the incredible logic of the BES giveaway experts whose welfare philosophy has been thrust on other States besides Ohio. The Bureau has urged every State to limit to a mere 6 weeks' disqualifications for all cases of voluntary leaving, discharge for misconduct, and refusal of suitable work. So, in New York a secretary quit her job for no reason, waited out 42 days of disqualification, and then climbed on the unemployment bandwagon.

In just this way millions of dollars are slipping out to persons who sit out short penalty periods, then rake in benefits. Indeed, BES-promoted laxity has become so flagrant that only 18 States now bother to impose heavier disqualifications for aggravated misconduct such as forgery, larceny, embezzlement, arson, intoxication, sabotage, or dishonesty.

Alfred L. Green, executive director of New York's division of employment, has pointed out that this situation is "typified by the case of the man who received unemployment benefits after he was fired for stealing \$25,000 from his employer. Under penal law that's larceny. Under the unemployment insurance law it is misconduct in connection with his employment, and benefits are paid after a suspension period. When the employer was notified that the benefits had been charged to his account, he was, to put it mildly, irritated."

The BES hacks away at restrictions set up by States to prevent compensation from becoming an outright grab bag. It has notified all States that it is "unnecessary as well as undesirable" to have legislative provisions which exclude women from jobless aid because of pregnancy or marriage obligations. The result? In Rhode Island a woman clerk married a man from Mississippi and quit her job to live in the South. When she claimed unemployment compensation, her employer objected—but an administrative ruling declared that it is a woman's duty "to live where her husband designates." For that reason she got unemployment benefits.

In New York Mrs. Sheila Shaw drew 9 weeks of unemployment compensation after she quit her \$45-a-week clerk-typist job to become a bride. Her employer appealed. When the case finally reached the State supreme court appellate division, the employer was turned down. The court put marriage in the same class "as an illness or other event of important personal consequence to the worker."

Snapped Albany's Knickerbocker News: "If employers are going to pay for honeymoons, they should do it outright—not with under-the-counter payoffs through the unemployment insurance fund."

BES has also notified States to write their laws "in broad terms with no specific requirement that claimants be actively seeking work." As a result, workers all too often just register at the local employment office and relax while paid specialists do their job hunting for them.

In scores of labor disputes strikers collect benefits completely contrary to the original intent of the law. In New York last fall, 25,000 striking steelworkers pocketed \$9 million in benefits because compensation is allowed in that State after a strike lasts 7 weeks. "It's outrageous for an employer to have to finance a strike against himself," says John A. Williams, chairman of the New York State Conference on Unemployment Insurance. "It makes a mockery of the fundamental principle that States should not take sides in disputes between employers and employees."

In defense of this practice, New York's chief compensation administrator counters that after 7 weeks a striker's reserves are likely to be exhausted and "since today we don't let people starve, the government is going to provide funds" in either "unemployment insurance or relief."

Is it reasonable to believe that New York steel strikers would have starved after 7 weeks without compensation? Did they starve in other States? The United Steelworkers of America has (or did have before the strike) a huge unemployment fund. Other national unions chipped in to help the steelworkers take care of its own. The millions in unemployment compensation money handed out to the New York steel strikers was in addition to funds received from their own unions.

While all the rackets mentioned thus far have beaten the system within the law, unemployment assistance is also plagued by illegal abuses. In the last three recorded years 170,000 cases of fraud were officially reported. Yet BES statistics show only 32,000 prosecutions and 25,000 convictions. The officially admitted take by gypsies: more than \$12 million.

States have a variety of methods for cross-checking the validity of claims, some better than others. But in thousands of cases benefits are granted solely on the word of the applicant. How much fraud thus slips by is not known, despite the millions of dollars BES has spent financing 30,000 detailed investigations of claimants in 41 States. BES simply refuses to disclose the total amount of fraud found in any one of these States.

Now the situation threatens to grow worse. Legislation before Congress would put the States completely under the thumb of BES by imposing mandatory Federal benefit rates in all States to run 9 months for anyone who qualifies for jobless aid. Big unions are already beating the drum for this Federal takeover of jobless assistance.

Even more disturbing, a majority of the Federal Advisory Council on Employment Security, a group of citizen consultants handpicked by BES and the Labor Department, has called for Federal benefit requirements.

Not only must this not happen, but Federal invasion of State unemployment compensation must cease. "It seems inevitable that, if present trends continue, the States will be reduced to the status of rubber stamps or the system will break down of its own complexity," warns William Papier, director of research and statistics at Ohio's Bureau of Unemployment Compensation.

No one questions that jobless assistance is a necessary and important program for the protection of legitimate workers made idle by conditions beyond their control. But it's time for unemployment compensation abuses to be cleaned up.

What can you as a citizen do about this? Here are suggestions:

If you know of any cheaters, report the facts to employment officials or to your local newspaper.

Find out if your State law needs to be tightened to prevent what you consider unjustified payments. If you decide that something should be done, communicate with your legislator. Write your governor. Get your neighbors interested.

Find out if your Congressman intends to support national legislation that would turn over unemployment compensation entirely to the Federal Government.

Most important, take a personal stand against the insidious "get it if you can" philosophy that keeps abuses alive. Just because it's technically legal to dip into the public till, don't let yourself be persuaded that it's the right thing to do.

This last is the real test. For America's moral fiber will be fatally weakened unless we as responsible citizens take action ourselves. We cannot afford to become a nation of loafers, system beaters, and dole grabbers.

Nuclear Sub "Sculpin" Launched

EXTENSION OF REMARKS OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. COLMER. Mr. Speaker, a milestone in the history of shipbuilding on the Gulf of Mexico was passed at 11:45 this morning when the *Sculpin* slid down the ways of the Ingalls Shipbuilding Corp. shipyard in the bustling city of Pascagoula, Miss.

The *Sculpin*, SS(N)-590, the second submarine of any type ever built on the gulf coast, is the first of four nuclear-powered attack-type boats being built in my hometown for the U.S. Navy, and I hail its launching with, I hope, pardonable pride.

The "590" is of the *Scamp* 588 class. Its design follows the prototype of the radically new attack submarines, the *Skipjack*, SS(N)-585, whose bullet-nosed bow, bulbous-shaped hull, and single propeller, driven by a nuclear powerplant, have won for her the title of the fastest submarine in the world. The primary mission of the attack submarines in the event of war will be to seek out and destroy enemy ships of all types.

The *Sculpin* is expected to be capable of performing at high speeds both on the surface and at great depths beneath the sea. It is designed to stay submerged for long periods of time, thus giving her great advantage in both offense and defense over the conventional type submarine. Incidentally, the last of the old fleet type submarines, the *Blueback*, was also built by Ingalls and was recently commissioned, with Lt. Comdr. Robert H. Gautier, a native of Pascagoula, as its skipper.

The christening of the *Sculpin* is the culmination of 4 years of planning, research, and training by the personnel of the very efficient Ingalls shipyard. It is also a token of the faith of the people of Jackson County, Miss., in spending several millions of dollars in the development of the Pascagoula Harbor, an effort in which the Federal Government last year joined.

Speakers at the launching ceremonies were Hon. Cecil P. Milne, Assistant Secretary of the Navy for Material, and Rear Adm. M. J. Lawrence, U.S. Navy, Assistant Chief of the Bureau of Ships for Field Activities.

Others participating in the colorful ceremonies were Messrs. Robert I. Ingalls, Jr., chairman of the board of Ingalls; Monro B. Lanier, Ingalls, vice chairman of the board; Fred J. Mayo, president of Ingalls; and Capt. R. W. Johnson, U.S. Navy, supervisor of shipbuilding at Pascagoula.

The ship was christened by Mrs. Fred Connaway, widow of the commander of the first *Sculpin* when it was lost on its ninth war patrol in the Pacific on November 19, 1943. Mrs. Connaway's daughter, Mrs. Joseph D. Pope, was her matron of honor.

Increased Productivity in Government Agencies

EXTENSION OF REMARKS

OF

HON. ROBERT R. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. BARRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call attention to a most interesting study of productivity in the Federal Government by Henry D. Lytton.

Mr. Lytton served in the Office of Defense Mobilization and the Second Hoover Commission. He has undertaken a study which is a pioneer first in this field and it seemed to me his work should be brought to the attention of the Congress. We are always assailed with the undocumented but tacit assumption that our Government is inefficient. Well here is someone who has really done some research on the subject and he comes up with just the opposite conclusion. He maintains that there is definite proof of rising productivity per man-hour in the Government agencies he studied.

According to Mr. Lytton's report covering the productivity of more than one-half the employment in the nondefense agencies of the Federal Government for the period, 1947-57, output per man-hour increased at an average annual rate of 2.2 percent. Mr. Lytton claims that his studies show annual productivity increases varied from 15.5 percent for the Veterans' Insurance Division to 1.2 percent for the Post Office Department. Increasing productivity in Government agencies means that paperwork is being processed more efficiently. However, much of the improved productivity can be attributed to large outlays on capital equipment—electronic computers and other types of improved office equipment. The increased productivity in Government agencies is, nevertheless, encouraging. We should not lose sight of the possibility that improved productivity in Government can hold down budgets and their burden on taxpayers.

The productivity trends traced in this report might have important implications for business and the U.S. economy as a whole. It is apparent from the experience of the past that productivity increases require substantial capital expenditures, whether by farmers, industry or government. Experience in recent years indicates that capital expenditures must rise steadily if gains in productivity are to be accomplished.

Some of our thinking about inflation, too, may be altered as a result of addi-

tions to our knowledge on productivity. Mr. Lytton's study of productivity in government indicates that there has been more real work accomplished by Government employees and less inflation in the cost of public services than previously supposed.

Government services—such as mail delivery—are an important part of the gross national product. It has been thought that salary increases granted to Government employees were not offset by increased output, but merely represented higher costs for the same amount of services. Lytton's work, however, suggests that recent salary increases in Government have been partially offset by productivity gains.

This is a particularly timely study for me when as a member of the House Post Office Committee I am required to determine much needed postal wage increases.

Experts tell me that pioneering work in any field should always be studied with care and caution. But great credit is due to Mr. Lytton for his splendid work and we may hope for further development of specific data and corroboration by others of his findings.

Therefore I ask to have printed a review of Mr. Lytton's work from the Harvard University "Review of Economics and Statistics" and a summary of his report:

[From Review of Economics and Statistics]
GOVERNMENT PRODUCTIVITY FOUND TO RISE FROM YEAR TO YEAR, AS IN PRIVATE INDUSTRY—2 PERCENT NORMAL GROWTH RATE SEEN

In what is believed to be the first analysis ever made of Federal employee productivity rates, a consultant, writing in the November issue of the authoritative quarterly Review of Economics and Statistics, edited by Seymour E. Harris for Harvard University, reports that average productivity—or efficiency of the typical American civil servant increased approximately one-sixth over the dozen years ending with the 1958 business recession. Leaving out 1958, the increase was nearly 20 percent. The author of the Review article, Henry D. Lytton, economic and management analyst of Washington, D.C., takes issue with prevailing concepts of productivity measurement and the estimation of America's total economic growth.

Private industry's output and productivity have always been estimated by starting with a dollar value and then dividing by a cost index to arrive at nonmoney terms. This may have given rise to the prevalent idea that a dollar sign always has to be placed on global output (production) figures. Mr. Lytton's analysis avoids the problem of price-tagging the work of Government employees, and expresses the total output of entire bureaus by means of a production index. When the production index is divided by an employment index for that same bureau, a productivity, or output per person, index is the result. But both indexes in this case based on the fiscal year 1947, output rose 29½ percent and employment rose 8½ percent by the 11th year. This automatically means a 19½ percent increase in productivity for the period.

Previous economic analyses have started with the implicit need to arrive at a money value for Government work; and the knowledge that Federal, State, and local civil servants and the uniformed military and protective forces cost the American taxpayer about \$40½ billion a year. Being unable to discover any way to price this work at a figure other than the same \$40½ billion,

economists traditionally have canceled out the two figures and settled for no increase in productivity at all over the years. Thus, as one economist writes: " . . . it is assumed that there is no change in the efficiency or output per man, so that all increases in salary are, in effect, increases in the price of Government gross product."

To Mr. Lytton, who spent considerable time recently measuring the efficiency trends of 11 categories of workers, numbering into the thousands, in one Federal bureau, this was unrealistic. As a test, he expanded his study to include as many as 793,000 officials and employees. With this sample constituting two-thirds of all domestic nondefense agency employees of the Federal Government, Mr. Lytton obtained results believed sufficient to refute the popular impression.

To estimate the global outputs of the agencies and bureaus involved, the analyst counted the number of times that 52 different kinds of operations were performed, or end products produced, in two agencies and one bureau during each of the years. Then he "weighted" the various production totals by their relative working time requirements, average cost, or other simple measure. Two bureaus themselves performed this weighting process for 87 other items, making 139 items tallied altogether. Total production was obtained by simple addition, and overall governmentwide output, by weighting and averaging the five agency and bureau production indexes. These data, together with the manpower data already available, gave the productivity indexes for the parts as well as the whole.

Among the places studied were the Post Office Department and Veterans' Administration, the Internal Revenue Bureau (collecting taxes) in the Treasury Department, the Social Security Administration (paying benefits) in the new Department of Health, Education, and Welfare, and the Commodity Stabilization Service (farm benefits) in the Department of Agriculture. The VA was also studied separately as to hospital, insurance, and general benefits (GI loan, GI training, compensation and pension) operations.

Mr. Lytton finds that efficiency in his sample agencies advanced at a rate of about 2.2 percent per year, compounded annually, during the 11 years prior to the 1958 recession, while the private economy rate of productivity growth was 3.1 percent in the same time. Making estimates as to the possible productivity advance of all the 11-million-strong government manpower, Mr. Lytton concludes that our national output growth year after year may be from 3 to 4½ percent greater than we have heretofore believed.

GOVERNMENT EFFICIENCY AND ITS MEASUREMENT: A PROBLEM FOR THE ECONOMIST, THE MANAGEMENT MAN, AND THE PUBLIC

(By Henry D. Lytton)

(Henry D. Lytton, economic and management consultant of Washington, D.C., is the author of a report on this subject in the Review of Economics and Statistics. He has been on the Econometric Institute and Hoover Commission staffs, advised industry and Government on markets, operations, and development programs, and recently served as deputy supervision chief for a bureau with 25,000 field employees.)

In 1900, one out of every 24 employed persons in the United States worked for the Federal Government, or for a State, county, municipal, or other local government. Recently the ratio was one out of every six, and it is still growing. Yet little is known about how these government staffs operate. Consequently, in making up the "national accounts" of the United States, "It is assumed that there is no change in the efficiency or output per man, so that all increases in salary are, in effect, increases in the price of Government gross product," to

quote Professor and Mrs. Richard Ruggles' 1958 study paper for the Joint Economic Committee.

If the population's participation in government is growing, so is the government budget problem. In the United States, the Federal Government's operating funds are obtained each year through Congress voting appropriations bills. According to Prof. Arthur Smithies, in his Budgetary Process in the United States, "the appropriations process serves the dual purpose of reviewing the past and of programming for the future, and is . . . satisfactory in neither respect." To remedy this, Professor Smithies would divide the process into two parts: a performance review, to "focus attention on economy and efficiency," and a program review, "related to policy objectives."

The actual trend of efficiency, or "productivity," of the governmental part of the economy of either a developed or underdeveloped nation is, therefore, becoming more and more important for society to know. It is also the first in a series of questions one must answer in trying to discover how wisely a nation's tax receipts are being spent, and how efficiently the funds for governmental salaries are being put to use. What the problems provoked by these matters (and their possible solutions) might be will be discussed below. The writer will first give the results of an exploratory study he made of the recent trends of "productivity" in this field. For "productivity," the simplest definition—production per capita (or output per man)—was used in this study.

It was decided to investigate what might have been done in the past on government productivity trends. In the United States, a basic analysis of the Post Office's productivity trend had been made by Dr. Witt Bowden of the Department of Labor, in 1932. Many more recent "work-measurement" systems were found, in various other agencies, comparing the aggregate production of groups of workers with their standard-performance rates—but they used no "common language." No other information on year-by-year trends reflecting the productivity of the combined personnel of any other agency, or indeed of any bureau within any other agency, was discovered, except for almost complete data for parts of two smaller bureaus over most of the post-World War II period.

The writer then saw that he could complete the latter data, modernize the Post Office study, and perhaps add other bureaus and agencies to this nucleus. There are altogether some 11 million persons in governmental work—including uniformed defense forces and civilians in the Defense Department. Of this total about half are in Federal and about half in State and local work. However, the nonmilitary Federal area would be a good enough subject for this first study. In the end, the writer succeeded in getting data on five agencies in this field which employed 793,000 persons within the continental United States in 1958. This was a two-thirds sample of the 1,183,000 total of employment by all Federal civilian agencies in the same territory and year.

This sample included all 539,000 Post Office Department personnel, all 171,000 Veterans' Administration employees, 51,000 of the 75,000-man Treasury Department staff (representing the tax-collection bureau), 24,000 of the 54,000 Health, Education, and Welfare Department workers (in the social security bureaus), and 7,500 (farm-benefits bureau) members of the 91,500-strong Agriculture Department staff.

After exhaustive investigations, the writer found this: The productivity of the average Government agency in this sample increased on the average about 1½ percent a year for the 11 fiscal years from 1947 to 1958. The variations from agency to agency (and within agencies) reflected differences in the nature, complexion, and novelty of the work

done, degree of mechanization, etc. (See table 1.) On account of the 1958 American recession, the average annual productivity increase was 1.8 percent for the first 10 fiscal years. (See table 2.) If veterans hospitals are omitted, the rest of the sample becomes more similar to private industry. The productivity gain of the rest of the sample was 2.15 percent for the first 10 fiscal years, while that for the entire private economy (using figures by Dr. John W. Kendrick, of the National Bureau of Economic Research) was 3.1 percent for the same 10 calendar years. Government productivity appears to have risen two-thirds as fast as its private economy counterpart:

On the other hand, the investigation of veterans hospital productivity had led to the study of American hospital and medical care as a whole. All comments and findings by authorities suggested that fields such as these often may show no gain—or even show losses—in productivity trends (considered as trends in quantity of work per capita), but without doubt often would show very large improvements in quality, or value of service given, if the latter could be measured on some numerical scale.

The method followed was essentially this: To find out the few major things done in each agency or bureau which were recognized as important enough to be recorded down through the years (there were 17 such in the postal service), and express them in terms of the single most important of those things (the delivery of a parcel equals the delivery of six letters, for example). Then to divide the equalized work done (so many letters or equivalent letters, for example) each year by the number of employees on the payroll that year. The resulting number of equivalent items per man gives the productivity level for the year, from which the productivity change from year to year can be calculated.

It is now seen that we must qualify any answer to the question: "What is the trend of governmental productivity?" If, by "government," we mean that part which is like most services and paperwork operations in the private economy, then the answer is: "Upward, and apparently similar to that of its commercial counterpart." If however, by "government," we mean public hospitals and other quality endeavors (education, research, defense, possibly foreign relations), the answer would be: "Negligible or downward, and apparently similar to whatever are its private-enterprise counterparts." (Prof. Werner Z. Hirsch reported a negligible public-education productivity trend in his 1959 study paper for the Joint Economic Committee.) Also, the quality trend in these cases would also have to be made a part of the answer.

Such productivity-trend studies should be made for every major Federal agency, bureau, and bureau activity, and similarly for all levels of State and local government, so that economists, managers, and the public could be informed.

To attack a second, broader question, "How wisely are tax receipts being spent?" one should note that the Federal cash budget expenditures (incorporating insurance-fund withdrawals and postal salaries—usually excluded) are now about \$99 billion a year; and that while \$22 billion of this is for salaries, an even bigger sum of \$77 billion is for programs. The latter carry out a nation's policy objectives, and are administered by the recipients of the farmer. Perhaps a new approach is now possible to the astronomical program costs—the costs of armaments, supplies, goods, and services; of grants and subsidies to agriculture, veterans, welfare, etc.; and of transfers of money from social security and other funds to social security and other beneficiaries.

Why not divide up the program costs in the same patterns followed in dividing up

agency work into bureau work, and bureau work into activities work (for matching against employee numbers) in the productivity-analysis process? (It was not mentioned before, but the veterans agency was divided into hospital-bureau, pension-bureau, and life insurance-bureau work; and each of the latter can be further divided into up-to-a-dozen activities of work. The same thing has been done by the two smaller bureaus in the study assembling their own productivity data; and can provisionally be done for the main activities within the postal service and tax collection bureau, as well.) The separate productivity trends and salary costs of each activity, as well as of each bureau and agency, can presumably be measured throughout the Government. This would make available, for each activity, bureau, and agency: (a) its program costs, (b) its salary costs, and (c) its productivity trend. With an eye on all three of these things one should then be able intelligently to investigate each of the bits and pieces making up the \$77 billion—from an economic, sociological, engineering, and accounting standpoint. One could consider whether each produces useful and necessary economic and social values (relative to each other and to alternative spending or saving choices), or merely involves "digging out holes and filling them up again."

To approach a third question, "How well are salary moneys being used?" one can be reminded of two things:

1. As the Labor Department cautions, gains in production per man cannot be ascribed to any one factor, but reflect the interaction of all factors. In private enterprise currently, according to Dr. Solomon Fabricant, of the National Bureau of Economic Research, labor (manpower) supplies about four-fifths of total resources used, but capital (depreciation charges and interest on investment) supplies the other one-fifth. Although few measurements of the trends of total-resource productivity—the efficiency of labor and capital in combination—have been made, they would furnish the only accurate yardstick by which to compare governmental and private economy efficiency trends. (Additionally, in quality-dominant fields, quality trends would have to be compared.)

2. In any case, just knowing the productivity (and quality) trend does not necessarily tell us anything about the actual, absolute productivity (and quality) level. To know the latter would require studying exactly parallel operations in government and industry, by engineering-accounting—as well as by socioeconomic—means. Some activities may be quite similar. Legal, personnel, finance, office, claim processing, account servicing, message handling, building maintenance, etc., would seem to be. A comparison of such parallel operations could help tell whether government productivity has been running roughly even with private productivity since 1947, only because it started way behind and has no intention of catching up, or because it conceivably started even and still is in a neck-and-neck race with it.

TABLE 1.—1947-58 average productivity change of selected civilian agencies of the U.S. Federal Government

	Percent
Post Office Department.....	+1¼
Veterans' Administration.....	+1½
Hospitals, etc. ¹	-¾
Pensions, etc.....	+4
Life insurance, etc.....	+15½
Internal Revenue Service.....	+3½
Social Security Administration.....	+5
Commodity Stabilization Service.....	+8
All 5 agencies.....	+1½

¹ Revised.

NOTE.—Data for first 3 or 4 years are missing for last 2 organizations.

TABLE 2.—Year-to-year productivity changes of 5 selected civilian agencies of the U.S. Federal Government, 1947-58

	Percent
1947 to 1948	+4¼
1948 to 1949	+¼
1949 to 1950	+1
1950 to 1951	+3½
1951 to 1952	+2¼
1952 to 1953	-1½
1953 to 1954	+2
1954 to 1955	+3
1955 to 1956	+1¼
1956 to 1957	+2
1957 to 1958	-1½
1947 to 1958	+1½

The Washington Star Endorses an Effective Bill To Deal With Employment of Retired Officers by Defense Contractors

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. HÉBERT. Mr. Speaker, the influential Washington Star has joined the long list of newspapers in endorsing an effective bill to deal with the employment of retired officers by defense contractors. The Star, in its editorial March 20, entitled "A Question of Ethics," clearly points out that the bill on the subject reported out by the Committee on Armed Services is totally inadequate and will not reach the problem.

I thoroughly agree with the position of the Star, and, as is well known, I will introduce the proper effective legislation when the bill comes before the House next Wednesday for action by this body.

Everybody is familiar with the phrase: "When the man on the street wants to make a point or prove a point, he says: 'And furthermore, I read it in the Star.'"

Here is the Star, read it there:

A QUESTION OF ETHICS

Recent hearings before the House Armed Services Committee showed clearly the need for an effective conflict-of-interest law applicable to retired officers of all the Armed Forces. The present hodgepodge of restrictions on postcareer employment of former officers is confusing, discriminatory and sometimes ineffective. We doubt, however, that the bill recently reported by the committee is strong enough to cope adequately with the "conflict" problem.

Under existing law, Navy and Marine Corps officers upon retirement are permanently prohibited from selling anything to the Navy—but not from selling to the Army or Air Force. Neither the Army nor the Air Force has any such rigid restriction—although a law, practically never enforced, according to a Senate subcommittee, makes it a crime for retired military officers to make sales to the Army (only) during the 2 years immediately following retirement.

The bill awaiting House action would permit retired officers of all the military services to sell or to aid or assist in the selling of anything to the Department of Defense or an Armed Force of the United States without criminal penalty, but would require forfeiture of their retired pay while so employed

during the 2 years after retirement. After the 2-year period there would be no loss of pay.

However, if Congress really intends to deal adequately with conflict-of-interest abuses—rare though they may be among retired officers—something stronger than the bill sent to the House ought to be enacted. We believe that most retired officers are men of integrity. As such they should be as eager as anyone else to avoid the appearance of evil. And we think it is an abuse of an officer's privileges for him to move overnight, or even within a 2-year period, from official duties involving, say, procurement of defense items to a private job requiring him to sell or assist in selling such items to the Government.

We hope, therefore, that the pending legislation will be strengthened on the floor so as to place a positive ban on such abuses during the 2 years following retirement.

A Vicious Inequity in Tax Structure

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. OLIVER. Mr. Speaker, of the many existing distortions in the Social Security Act, the limitation on earnings is one of the most objectionable. The existing law, as is well recognized, in effect, dictates how long a recipient of social security income can work and how much he can earn without being penalized. By imposing this limitation on earnings, we are in effect encouraging the early retirement of workers who can contribute substantially to the welfare of our society.

The injustice is further compounded since this limitation is only imposed on earned income, not on income received from dividends, interest, and rent. This provision runs counter to the American system of free enterprise in that it practices and compels discrimination. If our economy is to grow, we must encourage full employment of our human resources. Certainly, nobody believes that we should tolerate the damaging effect of laws which slow down progress and expansion of our national product.

In further reference to this issue, the comments of the distinguished columnist, Inez Robb, which appeared in the Washington Daily News of March 30, 1960, are most pertinent and valuable:

A VICIOUS INEQUITY IN TAX STRUCTURE

(By Inez Robb)

If a qualified jury were asked to choose the silliest law in the Federal tax structure, it would be hard put to select the really ultimate lulu.

However, I have a nomination: The majestic statute that now forbids anyone, between the ages of 65 and 72 and receiving social security, to earn in excess of \$1,200 annually. Any senior citizen with the git-up-and-go to earn in excess of \$1,200 is penalized by cuts in or loss of his social security benefits.

Now Senator CLINTON P. ANDERSON, Democrat, of New Mexico, former Secretary of Agriculture, has introduced a bill that would permit willing and able elders to earn \$2,000 annually before the penalties set in. Well,

I respect the Senator for trying to up the ante, but I wish he had tried for a touch-down instead of a place kick.

CRUEL, UNFAIR

It is not only silly but cruel and unfair to restrict the earning power of any free American citizen who is willing to roll up his sleeves and pitch in. It is a crazy infringement on the guaranteed liberties of the citizens to tell him what he can or can't earn, or how much he can work. Or to restrict him to a bare livelihood on the subsistence level that social security provides.

Social security is not a gift or a freewill offering of the Federal Government. Those who receive social security have, by law, contributed regularly to the fund, as have their employers. It represents part of the savings of the worker against old age and should be free of strings.

It is not only asinine but a waste of the Nation's skilled and experienced manpower to insist that the worker at age 65, who accepts social security, must for the next 7 years twiddle his thumbs. The Government graciously allows the oldster, after he reaches 72, to garner all the money he is capable of earning.

INEQUITY

Such restrictions on an American's right to earn not only plays ducks-and-drakes with his freedom, but there is a vicious inequity in the law. The Government is only interested in the earned income of oldsters between 65 and 72. The penalty is all on earned income; there is none on unearned income.

Thus, the retired citizen who has been able to save a fair share of his earned income during his working life and has an income, no matter what the amount, in addition to social security is not touched by these penalties.

As a result, the retired worker with an income of \$8,000 a year, in addition to social security benefits, suffers no penalties. Nor do I think he should perish forbid. It would be dastardly to penalize such a citizen.

But I am convinced it is even more dastardly to penalize the less fortunate man, whose earning power may never have been great at any time, by forbidding him to supplement his meager social security payments with as much as he is capable and willing to earn.

The "Dillon Era"

EXTENSION OF REMARKS

OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. LINDSAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to call to the attention of my colleagues an excellent editorial which appeared in the New York Times on March 30:

THE "DILLON ERA"

Two separate groups are now meeting in Europe to consider plans for replacing the Marshall era of American aid to Europe with the "Dillon era" of American-European partnership in trade. The term "Dillon era" was coined by President Hallstein of the Administrative Commission of the European Economic Community in honor of American Under Secretary of State Douglas Dillon. It is intended to denote the new phase of Western economic development symbolized by the American plan presented by Mr. Dillon at an economic meeting in Paris in

January and approved by 20 nations. Under this plan the United States and Canada would join a dollar-strong Western Europe in a new trans-Atlantic organization for greater and economic cooperation and joint aid to underdeveloped countries.

A detailed blueprint for this new organization is now being worked out by a committee for presentation to a meeting of the 20 nations in Paris April 19. But these nations have found it advisable to meet in Paris at once in an effort to head off a threatened trade war between the European Economic Community of the Inner Six, headed by France and Germany, and the European Free Trade Association of the Outer Seven, headed by Britain. Such a clash would create a most unhappy initiation of the "Dillon era."

This issue is also being considered by the European Parliamentary Assembly, the precursor of a parliament of a united Europe, now meeting in Strasbourg. It has before it a plan to speed up both the reduction of the trade barriers between members of the Community and the formation of their customs union by an early start of their common tariff toward others on the basis of reduced rates. The United States has endorsed this plan for both its political significance and as a step toward trade liberalizations, even though it may initially discriminate against American trade. But the Outer Seven, whose free trade association, of course, also discriminates against outsiders, including the United States, see in the Community's move only discrimination against themselves and threaten reprisals. It must be hoped that the assurances given Prime Minister Macmillan by Secretary Herter and Mr. Dillon will help to prevent a development that could seriously impair Western solidarity.

U.S. Presidents: No Set Pattern

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do, I present herewith to your attention and the attention of my distinguished colleagues a very timely editorial appearing in the Christian Science Monitor for Friday, March 25, 1960:

U.S. PRESIDENTS: NO SET PATTERN—AN INTIMATE MESSAGE FROM WASHINGTON

(By Neal Stanford)

This being a presidential election year, there is inevitably a deep interest in all probable candidates—their age, religion, residence, occupation, wealth, etc.

Stories, profiles, biographies of all current potential candidates pour off the presses in increasing number.

This column, in contrast, is a look not at this year's candidates but at those of the past—not so much to see what the historic pattern for Presidents might be as to disclose the variety and diversity of candidates for the country's highest office.

First, let us consider age. There has been no right age for a candidate. William Henry Harrison was 68 at the time of his inauguration. Theodore Roosevelt was 42. Andrew Jackson was the oldest on leaving office—nearly 70. Dwight D. Eisenhower will break that record by being 98 days over 70 when leaving office on January 21, 1961. William Jennings Bryan

was only 36 when he was nominated to oppose McKinley.

Also, there has been no dominant religious affiliation of the Nation's Chief Executives. The list includes: Episcopalians (9): Washington, Madison, Monroe, W. H. Harrison, Tyler, Taylor, Pierce, Arthur, F. D. Roosevelt; Presbyterians (7): Jackson, Polk, Buchanan, Cleveland, B. Harrison, Wilson, Eisenhower; Unitarians (4): J. Adams, J. Q. Adams, Fillmore, Taft; Methodists (3): Grant, Hayes, McKinley; Baptists (2): Harding, Truman; Members of the Dutch Reformed Church (2): Martin Van Buren and T. Roosevelt. Coolidge was a Congregationalist; Garfield belonged to the Disciples of Christ; Hoover is a Quaker. Three Presidents were of no specific denomination: Jefferson, Lincoln, Johnson.

The first Roman Catholic nominated for the presidency was not Alfred E. Smith, as is commonly believed, but Charles O'Connor, who was nominated in 1872 by a faction of the Democratic Party that refused to accept the nomination of Horace Greeley. O'Connor declined the nomination but received nearly 30,000 votes in the election. The only other Roman Catholic to be nominated was Al Smith in 1928 by the Democrats.

Only in the matter of occupation does there seem to be any dominant choice. Twenty-four Presidents were lawyers; one was a journalist; one an engineer; five were professional soldiers; and two (Johnson and T. Roosevelt) were public officials for most of their lives.

As for the wealth of Presidents, judged by the value of the estates they left, the job of Chief Executive has not been noticeably profitable or always led to financial success on retirement. It needs to be remembered, however, that a few Presidents had a certain inherited wealth.

It was unusual for a President, prior to this century, to leave an estate over \$100,000, though George Washington's estate was valued at \$530,000, Taylor's at \$142,000, and Polk's at something over \$100,000. John Adams left an estate of only \$30,000; John Quincy Adams left an estate of \$60,000; Lincoln's estate was valued at \$83,000; Johnson's at \$50,000. Jefferson, Monroe, W. H. Harrison, and Grant left no estates—though Grant's autobiography later brought in \$500,000.

The first sizable estate in the past century was left by Cleveland—\$250,000. Teddy Roosevelt left an estate of \$811,000; Taft, an estate of \$475,000; Wilson, one of \$600,000; Harding, an estate of \$487,000; Coolidge, one of \$500,000.

Franklin D. Roosevelt was the first to leave an estate over a million dollars—\$1,085,500, to be exact. The financial condition of former Presidents Hoover and Truman and President Eisenhower are not matters of public record. But Mr. Hoover is considered to be a millionaire. Mr. Truman has earned sizable sums by his writings, and President Eisenhower may well be in the millionaire class with his writings and other assets.

Nor is there any particular State especially favorable to presidential candidates—though seven were residents of New York at the time of their inaugurations; six were residents of Ohio; five of Virginia; three of Massachusetts; three of Tennessee; two of Illinois; and one each of California, Indiana, Louisiana, Missouri, New Hampshire, New Jersey, and Pennsylvania.

Eleven American Presidents, it is not always remembered, were elected without receiving a majority of the popular vote—although, of course, getting the necessary electoral votes: John Quincy Adams, James K. Polk, Zachary Taylor, James Buchanan, Abraham Lincoln (his first), Rutherford B. Hayes, James A. Garfield, Grover Cleveland

(both terms), B. Harrison, Woodrow Wilson (both terms), and Harry Truman.

There have also been several women nominated for the Presidency—an even dozen, though all by minor parties. The first woman candidate was nominated in 1872 to oppose President Grant. She was Victoria Claflin Woodhull of the Equal Rights Party. Her running mate in that election was Frederick Douglass, the first Negro candidate for the Vice Presidency.

Electricity Is Boon to Farmers

EXTENSION OF REMARKS

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. LEVERING. Mr. Speaker, since the Rural Electric Administration was established 25 years ago 95 percent of the farms in America have been electrified which demonstrates how free enterprise and a sympathetic government can work together to solve vexing and difficult problems for human beings.

Those who have been active in the REA movement know from the history of the agency that rural electrification has been a real fight, all during its history, and even before the Rural Electrification Administration was born. I did not know the men, but I knew of them, who had a hand in opening up rural America to electricity, and I should like to pay tribute to them. Foremost among them was Senator George W. Norris, the Independent of Nebraska, who for 25 years reigned supreme in the Senate as the man who thought the most about the future of his country. Among those early fighters there was a Congressman named John E. Rankin, of Tupelo, Miss., who no longer sits in the House of Representatives but still is remembered by the oldtimers there. John Rankin will always be numbered among the founders of the REA. And then there was Judson King, who died only a few months ago in his home outside of Washington. Judson King was a public relations man for the people. For most of his life, he battled, through his writings, for projects that would benefit all the people of this country, as opposed to ideas and ideals that were designed to help the few at the expense of the many. And, I am happy to report, my father-in-law, former Representative Usher L. Burdick, was in that valiant and limited group that originally fought the battles for rural electrification. I am also happy to report that Usher Burdick, although he retired from Congress at the end of the 85th Congress, still is alive and happy and as rambunctious as ever. While, as I noted, I did not know many of these men personally, I know them by reputation, and I am sure that there is today, among us, several individuals who may have known one or the other of them. It behooves us, I believe, to remember these stalwarts of other days, for we can gather strength from their struggles and their victories for the battles that may lie ahead.

In 1935, before the REA came into being, only 1 farm in every 10 in the United States had electricity. For all practical purposes, rural America was in the dark. Of course, there were kerosene lamps, and there were hand-operated water pumps, and other back-breaking tools and equipment on the farms throughout the land. Today, due principally to the foresight of the men who worked for the REA to be enacted in the law, we have seen electricity transform the rural home into a modern, convenient place to live.

In the past 25 years some 1,000 REA cooperatives—completed owned and operated by local people in as many communities—have borrowed and used about \$3 billion from the Federal Government to build modern electric power systems to serve rural areas. I doubt seriously if \$3 billion of Federal funds ever has been used more economically or with more lasting benefit to the comfort and welfare of as many people in the whole history of government anywhere on earth.

Back in 1935, when the REA experiment was just beginning, it was argued that all farmers who wanted electricity had it and that there was no market for power out in the country. Experience in the last 25 years has demonstrated how wrong this contention was. Rural people are using electricity at an ever-increasing rate, doubling their use of power every 5 to 7 years.

Mr. Speaker, the success of the rural electrification program has been so overwhelming that many opponents no longer try to attack it openly, instead they are coming forth with proposals labeled "improvements" of the program. For the past few years the administration has asked Congress to jack up the REA interest rate. This is being done despite the fact that the evidence indicates that such an increase would necessitate higher electric bills for the consumers served and many co-ops, especially those in the thinner territories would be driven out of business. As we know, REA is prohibited by law from serving towns with a population of more than 1,500, which means that it is barred from participating in the cream of the electric industry market. There have been proposals recently to permit the Secretary of Agriculture to turn a part of the loan business over to the Wall Street bankers.

These proposals have been so drastic, however, that no Member is willing to fight for them.

Mr. Speaker, it should be pointed out that REA has been good not only for farmers but the country as a whole. An important result of the rural electrification program is the increased business it brings into rural communities. It stimulates private business both locally and nationally. Surveys indicate that for every dollar invested in rural power facilities, the farmers invest \$3 to \$4 in wiring, plumbing, and electrical appliances. Also, when power is available, the establishment of industry in rural areas is encouraged.

Mr. Speaker under leave to extend my remarks in the Record, I include a fine article by Virginia Cruikshank contained

in the March 26 edition of the Delaware Gazette of Delaware, Ohio, which carries a graphic account of how REA has changed the "face of America":

ELECTRICITY IS BOON TO FARMERS

(By Virginia Cruikshank)

Some of us may have forgotten just how rugged life was in the rural areas before we had electricity.

Remember the coal stoves, kerosene lamps, washboards, water buckets, hand milking, and all the other hand-powered chores that made the farmer and his wife old before their time?

No one would want to return to that kind of rural living, although we may sometimes wax sentimental about the old days. We are even digging around in the attic and cellar for some of those items mentioned above because our city neighbors who are moving to the country prize them as antiques.

Electric power has changed the face of all rural America. Not only has it brought an end to a lot of the drudgery, but it has changed the entire outlook of rural people. They are no longer "country hicks." Their life has become the envy of many city people.

This year the Nation is paying tribute to its rural electric systems on the 25th anniversary of REA. President Roosevelt signed the Executive Order May 11, 1935, that brought the Rural Electrification Administration into being.

Use of electricity today has passed the wildest dreams of 1935. USDA researchers have found that there are 450 ways to use electricity on the farm and in the farm home. And just wait until we get all those bulk tanks installed around here in the next year. Consumption of power will zoom.

Only about 4 percent of the farms in the United States are still without electric power. In the territory of the Delaware Rural Electric Cooperative, there are only two farms and two houses without power, but the company is willing to build the lines to them whenever the owners are ready.

Results of Questionnaire Sent to Cross Section of Residents of First Congressional District of Washington State

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. PELLY. Mr. Speaker, a few weeks ago I sent out a questionnaire on important national issues to a cross section of my constituents.

More than 6,000 replies or more than 20 percent of the questionnaires were filled out and returned to me. I sent these to be tabulated by an independent business firm that does this sort of work and the results are most interesting.

Organized letter writing campaigns can, and often do, give a distorted picture of home sentiment based on a Congressman's daily mail. On the contrary an actual public opinion poll of residents of an area brings the majority viewpoint into much better focus.

This situation showed up especially in the comparison of views from my mail as against the results of my questionnaire on a subject such as Federal aid

for teachers' salaries. I have received many letters urging my support of Federal aid for teachers' salaries. Only a few of my letters express opposition to such legislation. When it came to answering the question: Do you favor continued reliance on local and State support for teachers' salaries, rather than Federal grants for this purpose? My tabulation from the questionnaire was 3,641 in favor of continued local and State support as compared with only 1,007 against. A ratio of better than 3 to 1 opposed.

Another significant result was the figure in support of a firm stand on Berlin: 4,551 replied "Yes" only 173 replied "No," which certainly is worth noting right at this time.

Finally, Mr. Speaker, I should point out that in checking with my colleagues from the State of Washington, I find there is great similarity between mine and the percentages shown in the replies to my colleagues. Taking into consideration approximately 250,000 questionnaires circulated in the First, Second, Third, Fourth, and Sixth Congressional Districts of my State, the results on the two questions applicable to schools were as follows:

School construction

Congressional district	Percentages	
	Opposed to Federal aid	In favor of Federal aid
1st.....	55.4	44.6
2d.....	52.6	47.4
3d.....	64.1	35.9
4th.....	59.7	40.3
6th.....	51.9	48.1

Teachers' salaries

Congressional district	Percentages	
	Opposed to Federal aid	In favor of Federal aid
1st.....	78.3	21.7
2d.....	72.9	27.1
3d.....	74.2	25.8
4th.....	80.6	19.4
6th.....	69.8	30.2

This, Mr. Speaker, certainly insofar as my own State is concerned, is in complete contradiction to the percentages published by groups supporting Federal funds to States for education, such as the National Education Association which has stated that 70 percent of the citizens of this country are in favor of meeting our school needs by the use of Federal funds.

The willingness of my constituents to participate in this public opinion poll was most gratifying. Several of the questions I asked were difficult to answer with an unqualified "yes" or "no," and thus it was that many of those who answered set forth their views in more detail, and I found such additional comments most interesting. In fact, I have made an index by subject of these comments for further review.

A complete tabulation of my own questionnaire results in percentages is listed below:

	Percentages			Percentages	
	Yes	No		Yes	No
Foreign affairs:			General topics:		
1. Do you favor diplomatic recognition of Communist China?	21.6	78.4	1. Do you think more federally administered programs should be turned back to the States?	74.9	25.1
2. Should we continue military and economic aid to friendly nations?	83.5	16.5	2. Do you favor reduction of agriculture price supports?	89.6	10.4
3. Do you favor United States defense of Formosa?	80.1	19.1	3. Are you in favor of amending the Social Security Act to include medical expenses, the increased cost to be paid by additional contributions by employees and employers?	54.3	45.7
4. Do you approve of a firm stand with respect to Berlin?	96.4	3.6	4. Do you believe the Federal Government should have more authority to regulate radio and television programs?	51.8	48.2
Schools:			5. Do you favor emphasis on a balanced budget in the coming year and applying any surplus on the national debt?	90.8	9.2
1. Do you feel the Federal Government should provide grants to States to meet school construction needs?	44.6	55.4	6. Do you believe the House of Representatives should continue the Un-American Activities Committee?	83.3	16.7
2. Do you favor continued reliance on local and State support for teachers' salaries, rather than Federal grants for this purpose?	78.3	21.7			
Taxes:					
1. Do you favor Federal legislation to tighten taxation of cooperatives?	79.4	20.6			
2. Should we allow parents to deduct from their income tax tuition paid for children attending college?	67.3	32.7			

Why H.R. 10590 Should Not Be Enacted

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following letter, dated March 25, 1960, which I received from our former colleague, the Honorable Andrew J. Biemiller, director, department of legislation, AFL-CIO.

I am in full agreement with the views expressed in the letter:

AMERICAN FEDERATION OF LABOR AND
CONGRESS OF INDUSTRIAL ORGANIZATIONS,
Washington, D.C., March 25, 1960.

Hon. ABRAHAM J. MULTER,
House Office Building,
Washington, D.C.

DEAR Mr. MULTER: On February 15, I wrote to you explaining why the AFL-CIO opposes the President's effort to breach the 42-year-old 4½ percent interest ceiling on long-term U.S. bonds. Recently, the Committee on Ways and Means approved a so-called compromise (H.R. 10590) which would foist an unnecessary and intolerable burden on future generations of taxpayers.

I hope you will read the following brief analysis of the committee's proposal, which supplements our earlier statement, before your own decision is finally made on this vital issue.

If you vote "yes" for the Ways and Means four-point compromise:

1. You will be putting your seal of approval on unlimited Treasury power to buy in old unmatured low-interest rate bonds and to swap for them new bonds that can yield, and in certain cases will yield, interest rates in excess of the statutory ceiling of 4½ percent.

For example, on March 11, 1960, a 2½ percent bond maturing in 1961 sold at 96 and yielded 4.42 percent. This bond could be exchanged for a new one extending the maturity perhaps 7 or 8 years and yielding rates of interest higher than the original 2½ percent coupon rate. The new yield rate can go to an unlimited level as long as the new bond does not carry a coupon rate in excess of the statutory ceiling of 4½ percent. This process will aid the owner of the bond who bought at par and is still getting only the 2½ percent coupon rate and not the yield rate of 4.42 percent to receive a higher rate of interest. While the new bond will enable the bond owner to get a higher rate of interest, it will result in higher interest costs to the Treasury for a longer period of years.

Of course, this kind of discount selling will breach the historic 4½ percent ceiling—but without the face of the bond saying so. Thus, the administration's objective will be achieved by indirection. However, this proposed refunding operation may ultimately add billions more to the already fantastic \$9.4 billion burden we are now paying in interest charges alone this year on the Federal debt.

2. In addition, you will be voting to permit the President to issue almost \$6 billion in bonds yearly (equal to 2 percent of the total debt) at any interest rate over 4½ percent he may choose. Never before has any President been granted the unrestricted power to fix interest rates which this compromise now asks Congress to approve.

We are told that items 1 and 2 must be enacted to stretch out the Federal debt and to fight inflation. Yet, from 1953 until recently, the administration was doing very little to stretch out the debt during years when interest rates were far lower.

To lock into the debt structure now for many years peak interest rates—rates that have already been ratcheted up by this administration and the Federal Reserve Board to a 30-year high—is hardly prudent management of the public debt.

Moreover, items 1 and 2 would encourage a one-way direction for interest rates on U.S. long-term bonds—up. It is noteworthy that no requirement is included that the Treasury call in overpriced loans when interest rates are going down.

As for inflation: Since 1953, the administration and the Federal Reserve Board have had available a variety of fiscal and monetary tools with which to fight higher prices. However, except during the recessions of 1954 and 1957-58, they have shown an almost exclusive fondness for higher interest rates as a price stabilizing device. Now, although prices have been almost stable for 2 years, the Treasury is demanding permission to raise interest rates once again in order to fight what is, concededly, a phantom inflation.

Apparently, this administration opposes increasing the prices of everything, except money.

3 and 4. You will be voting for a "sweetener" calculated to entice the unaware. This part of the compromise proposes interest rates higher than 4½ percent for issues of Government obligations invested in special U.S. trust funds and for E and H U.S. savings bonds. Of course, this provision would be appropriate and only fair if the rest of the bill is passed. However, the Government is now paying substantially less than 4½ percent on its obligations owned by its trust funds, and as for savings bonds, only 3½ percent in interest is currently being paid, although up to 4½ is permissible under existing law.

If the administration really wants to stretch out the Federal debt, it should first use its power to sell savings bonds at a

higher rate and take other steps to make these bonds more attractive and salable. Why should small family savers perpetually be entitled to less for lending money to their government than bankers and others receive? Furthermore, it would be much wiser to try to extend the long-term portion of the debt via greater sales of savings bonds and without scrapping the 4½-percent interest ceiling (as proposed in items 1 and 2) than to pierce the 4½-percent ceiling and thus pressure all public and private interest rates yet another notch higher, as a consequence.

It is the view of the AFL-CIO that the so-called committee compromise is actually abdication. Because the issue so vitally affects the welfare of every American, we urge you to strenuously oppose enactment of H.R. 10590.

Sincerely yours,
ANDREW J. BIEMILLER,
Director, Department of Legislation.

"Congress Is the True Sampling of Citizens"—Editorial Appearing in the Los Angeles Times, Tuesday, March 22, 1960, by Holmes Alexander

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do, I am pleased to call to your attention, and the attention of my distinguished colleagues the very timely editorial in the Los Angeles Times, March 22, 1960, by Holmes Alexander:

CONGRESS IS THE TRUE SAMPLING OF CITIZENS

At the peak of a tiered platform which is climaxed by an impressive throne, Chairman CARL VINSON of the House Armed Services Committee takes testimony on how to curb conflict of interest in the military services.

Down the hallway, amid similar trappings of solemnity and legislative authority, Chairman EMANUEL CELLER of the House Judiciary Committee takes testimony on the same subject but on a broader front. It is not a new matter of congressional concern and inquiry, but it is a pressing one. It relates to public immorality that made headline stories of Sherman Adams, Charles Van Doren, payola, cheating students, bribed athletes and much else.

Possibly we need some new laws, although we already have far too many. Where Gov-

ernment treats with persons and corporations, as in giving out scholarships under the guise of national defense, there ought to be protections of the public purse, including non-Communist affidavits.

The Vinson committee is looking over a bill, H.R. 9632, by Representative EDWARD HÉBERT. The measure would lay down ground rules for retired military officers to become representatives of companies which sell to the Defense Department. The Celler committee is examining the whole spectrum of conflict of interest in Government fields. The Association of the Bar of the City of New York has just produced a mammoth study on the matter which is now being piped as testimony into congressional minds.

Common to all legislation in this area is the use of frankness—such as making public the lists of persons who are legitimately trying to influence the Government.

The Hébert bill wants the Defense Department to set up an office of enrollment where certain officers-turned-salesmen must post information about their jobs. The Celler committee is receiving proposals for the confrontation of rival pitchmen in the game of bidding for Federal favors.

So it goes, and probably it's necessary, but you attend these hearings and you sense a peril. I found the danger expressed in a pretty maudlin letter, published in the March issue of *Coronet*, from novelist John Steinbeck to Adlai Stevenson. Steinbeck had been reading the papers at the time of the TV scandals last year, and news stories gave him an impression of "a creeping, all pervading nerve-gas of immorality which starts in the nursery and does not stop before it reaches the highest offices, both corporate and Government."

Well, this is the peril in the probing and the reporting, in the overstating and overmoralizing which follow these gross outbursts of materialism and cupidity. Steinbeck is right—but only partly and, I would hope, minimally.

The trouble is that when moral indignation goes berserk, heroic monuments get smashed, witches and witchhunters both get burned, the braying demagogues and the unctuous hypocrite get their innings in the seats of the mighty.

Things are bad, heaven knows, and we have not lived up to the opportunities of our freedom and wealth. We do have dishonest cops, rotten standards of family life, corrupt officials and power-grasping leaders in every phase of public life. But, however bad the record is, there is a redemption at hand. If you spend a decade or more in Washington, you come to conclude this—that the ruling trait in Americanism is not avarice but aspiration.

It has been said that the big success of Allen Drury's novel, "Advice and Consent," lies in its appeal to American Idealism. The same thing happened two decades ago when "Gone With the Wind" galloped straight past the objections of highbrow critics and became an American classic.

The American people have a way of recognizing and affirming true estimates of their character. Both these books say that, although inhabited by fallible persons and cluttered with cumbersome but often magnificent institutions, our American civilization is still groping for the stars. Often, at a distance, it may seem that congressional committees are muckraking and debunking. After all, probes into conflicts of interest are going to turn up conflicts, and searches for un-American activities are going to find these too.

But Congress is a true sampling of the American people. Over the years Congress expresses the aspirations for decency and achievement which lie in the American heart.

Goal of Kremlin Is World Communism Despite Talk of Disarmament and Peace

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. BOSCH. Mr. Speaker, we have just recently had a visit from Chancellor Konrad Adenauer of the Federal Republic of Germany which has focused attention on the important problem of that country's reunification, and there are proposals and counterproposals for universal disarmament. These are serious problems which affect the complete future of the free world and the desire of most of the people on this earth for world peace. These problems are fraught with many pitfalls, and we must understand the constant threat of the rulers in the Kremlin who, while talking disarmament and peace, never forget their goal of world communism.

Under leave to extend my remarks, I include the translation of an article from Bulletin No. 1, dated January 5, 1960, of the Federal Republic of Germany, Bonn. This article was written by the Honorable Franz-Josef Strauss, Federal Minister of Defense, and I commend it to the attention of my colleagues:

BULLETIN No. 1

(By Franz-Josef Straub, German Federal Minister of Defense)

One must realize that world communism and its representative powers, the Soviet Union and China, have so far not abandoned their aims to spread a world revolution and to extend the power of communism to all parts of the earth. This year, Mr. Khrushchev quite frankly expressed his opinion when he said "Sooner or later, communism will rule the world. We are living in the heroic days of the revolution." He was merely corroborating what he already affirmed in 1955, when countless people, prompted by false optimism, thought they could exploit the spirit of Geneva as the starting point for peaceful and happy times. Khrushchev, incidentally, at that time also said: "Certain people misinterpret the spirit of Geneva. They should once and for all bear in mind that we are not abandoning nor shall ever abandon our plans and our fight for the victory of communism." Khrushchev announced this year in Stettin that he was interested not so much in the Oder-Neisse frontier for Poland, but, rather, in the sacred western frontier of communism on the Elbe and the Werra, and he boastfully assured his audience at the Leipzig Workers' Conference that this frontier would continue to exist until the whole of Germany was part of the Communist realm.

We must not venture to hope that we are heading for peaceful and untroubled times. The Federal Government does not intend to conceal the truth from the German people and make them believe that they are being led toward glorious times. We realize the full significance of the fact that Khrushchev on his return from America said that the coexistence policy was in no way a renunciation of the Communist claim to world domination, and that official Soviet

sources described the discussion of the Hungarian tragedy in the United Nations as a blow against the spirit of Camp David, or decried the assurances given during Eisenhower's visit to Italy regarding the strengthening of the NATO, as a violation of the attempt to ease international tension. So far, the Soviets have not given up regarding the liquidation of the cold war, in the first place, as the liquidation of the resistance against communism.

But there is one thing that we can take for granted in the case of the Soviets, which they have in common with us, though for a different reason. They do not want to risk a third world war and thus involve themselves in certain suicide. They, too, have a very concrete interest, though it may not be a moral one, in seeing to it that the Soviet Union does not become the victim of an all-destructive war. And for this reason they are prepared to discuss disarmament. In the interests of humanity we must take them at their word and must discuss serious disarmament proposals, including disarmament measures and effective control, with them. In view of the modern science of armament, disarmament and control measures are only likely to prove effective if they are extended to cover the whole world, even though their execution may be carried out in stages. But we do not intend to harbor any doubts about the fact that it is not simply rearmament that has caused the tension and unrest in the world. For Western rearmament, the rearmament of the German Federal Republic and the setting up of the defense organization of the NATO have not come into existence of their own accord or as the result of any rash decision. They are the result of the policy pursued by the Soviets in Europe and Asia.

Hence, true peace and order and a genuine easing of international tension will only prevail in this world again when all individuals and all peoples are conceded the rights which, according to the will of the Divine Creator, are inalienable and natural; namely, human dignity and freedom of the individual and the right of self-determination for peoples. Neither the Berlin question, nor the German question as a whole, which is connected with the former, can be solved by an artificial and compulsory structure or, according to the Soviet proposal, by the setting up of a free city for half of Berlin, but solely by recognition of the right of self-determination for the entire German people. Unrest and fear, insecurity and tension will only disappear when the dreadful Iron Curtain, which separates people from one another against their will, is removed again by those who have arbitrarily set it up.

It is therefore imperative that the Soviet rulers should be made to realize and believe that we want a genuine peace, that we are prepared to support and carry out all the necessary measures to cut down armament gradually and under control, but that we intend to retain the means of our self-defense as long as we are obliged to protect ourselves against the global claims to power of a despotic system. The Soviet rulers must likewise be made to realize that we intend to oppose all further expansion of communism determinedly. We must show them that we refuse to allow ourselves to be misled and lulled in our vigilance, and they must be made to realize by words and deeds that only the renunciation on the part of every system, including the Communist system, too, of world revolution, world conquest, and world domination plans will bring genuine peace and a permanent easing of international tension. They must, above all, be made to realize that the way to a complete disarmament leads via a change in policy and that this change in policy is in the interests of all peoples, their survival in this

age of nuclear weapons, their economic and cultural aims and their further development.

And it is precisely for this reason that we must realize that we have a price to pay for freedom and security. We must do our share of the tasks justly allotted to us, in order to establish and preserve the unity, solidarity, and strength of the Atlantic pact. We are the next to be snatched by the Communist claim to power; we are the next to foot the bill if the noble ideal of a European union and of Atlantic solidarity should go to pieces; we are the last who, on the threshold of the year 1960, can afford to cherish illusions and confuse wishes with reality.

But if we recall how we worked our way up again out of the abyss of the catastrophe of 1945 and the hopelessness and despair of the years that followed, and if we look around today and see how trade and life are prospering and how new and modern towns have grown up on the ruins of the old ones, then we venture to hope that this policy, which is based on moral principles and on a feeling of responsibility to God and man, will continue to help us to cope successfully with the great tasks which confront us. And in view of the prospect of a new era, we understand the profound meaning of the words of the Christmas message, with its comfort and its obligation—"Be ye not afraid."

Political Hypocrisy

EXTENSION OF REMARKS OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. ALGER. Mr. Speaker, the terms "liberals" and "conservatives" today label opposing philosophies concerning the role of Federal Government in our lives. Out of the clash of these opposing ideologies comes the legislation we pass in Congress.

Nothing has been more controversial than civil rights and nothing, some Members think, has been a phonier issue. True, political expediency in any controversial issue muddies the water of honest difference of opinion, and could be termed phony. Equally true, there are sincere dedicated men of strong conviction on either side of the civil rights controversy and for that matter on other controversial issues. Yet of all the controversial issues today, civil rights in my mind is the least understood by either side because of emotional prejudice and political expediency.

So it was that I found the editorial "Political Hypocrisy," by Balfour Jaymes of the Shreveport Journal of February 27, 1960, most interesting. I have tried to understand the liberals point of view, perhaps not as much as I should, but nevertheless have made the effort and will continue to do so. Others on the conservative side, I know, have done the same. This editorial highlights a fundamental contradiction within the liberal ranks, it seems to me, and I submit it for the RECORD for the attention of all who are also interested:

[From the Shreveport (La.) Journal, Feb. 27, 1960]

TWO KINDS OF RIGHTS—POLITICAL HYPOCRISY (By Balfour Jaymes)

Strange, indeed, are the ways of politicians, particularly the liberal variety.

With these politicians, truth is something to be stretched, distorted or completely ignored, depending upon the purpose to be served.

This sort of hypocrisy now is rolling in high gear in the Halls of Congress.

The liberal Members of Congress are kicking up a noisy and hypocritical fuss about the civil rights voting bill. They loudly contend that certain minority groups are being denied the right to vote and this injustice must be remedied at once.

Obviously, this is a political device calculated to win votes.

If the liberals were really interested in the protection of human rights and personal liberties, they would raise their voices in favor of the right of a person to work whenever and for whomever he chooses.

But the liberal is painfully silent on this issue. In fact, most of them openly oppose any law guaranteeing the right of a person to work. This right, they brazenly contend, is a union-granted right.

This is hypocrisy at its worst; for a basic human right is at stake.

As the liberal politician sees it, a person should not be denied the right to vote, but he sees absolutely nothing wrong in denying the same person the right to work.

What can be more important to a person than the right to work when and where he finds satisfactory employment?

Does not the Constitution guarantee that right?

Of course, it does.

How does it happen, then, that a person is denied his constitutional right to work?

In recent years, the law of the union has supplanted this constitutional right. No longer can a person work whenever and wherever he chooses if his employment conflicts with the employment of a union worker.

Does this violation of personal rights disturb the liberal lawmaker?

Not at all.

The law of the union provides:

"You can work if you join the union, pay your dues and assessments and submit to the rules, regulations and orders of the union."

The union member realizes that the law of the union is supreme and that he must submit to it, or else he doesn't work. And what's more, that he may get kicked and beaten besides.

The law of the union, as interpreted by its leaders and some of its members, provides drastic and cruel methods of punishment for nonunion and union workers alike, who defy its rules, regulations and policies.

These methods consist of harassment, coercion, intimidation, crime and violence. Thousands of law-abiding Americans, both in and out of unions, know what it means to defy the law of the union. They and their families are hounded day and night, their automobiles damaged or destroyed, their homes shot up and bombed.

Does this violation of personal rights disturb the political liberal?

Not at all.

The law of the union calls for terror tactics whenever there is any troublesome conflict between union and nonunion workers or whenever there is resistance to the demands of the union.

Of course, the union bosses deny this. But the evidence is clear and convincing. Recent and current strike violence at Albert

Lea, Minn., Henderson, N.C., Portland, Oreg., are a few cases in point. There are many, many others. In each of these strikes there has been destruction of property, shootings, stoning, and bombings. Anarchy has existed because the law of the union was permitted to supplant the law of the land.

What have the liberal Members of Congress, who are kicking up such a wordy storm over the right to vote, done about the right to work of these law-abiding Americans?

You guessed it. Absolutely nothing.

And obviously they have no intention of doing anything about it until such times as the 50-million nonunion workers make it clear that they will no longer tolerate this rank injustice. There's one thing that the liberal politician heeds quickly—it's votes, for he is primarily motivated by the basic urge of perpetuating himself in office.

He carries the favor of labor because the labor bosses, who are militant and ruthless, deliver the vote so long as the political liberal submits wholly and completely to their demands.

The law of the union provides for mass picketing, which is another term for mob violence.

The liberal politicians are angered and horrified whenever there is any mob violence, especially if it occurs in the South. That is, unless it is labor mob violence, which they apparently regard as a right of the union, since the law of the union is above the law of the land.

As the liberal politician sees it, there's nothing wrong with labor mob violence, stoning, shooting and bombing. But it's a vicious brutal crime if any other group of people resort to mob violence.

This is cheap, shameful hypocrisy.

Labor dictatorships, like all dictatorships, are ruthless and monopolistic. They tolerate no dissent. Their policies are not to be questioned or disobeyed.

Any union member, or any politician, who deviates from the demands of the labor bosses is condemned as an enemy of labor. There must be complete submission; total subservience.

The liberal politicians know all of these things—and much more—about the ruthless tactics of the law of the union which deprive law-abiding Americans from work when and where they choose.

They know that mob violence by unions is anarchy.

They know that labor dictatorship regards itself as above the law of the land.

They know that the right to work is just as important as the right to vote and that it is a constitutional right.

Since the liberal politician is aware of these things, it is rank and shameful hypocrisy for him to profess an interest in the preservation of human rights and personal liberties.

To sacrifice principle upon the altar of political expediency is a tragic price to pay for votes.

It's hypocrisy at its very worst.

Civil Rights

EXTENSION OF REMARKS OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. DENT. Mr. Speaker, the records will show that during the past 2 weeks of

debate on the issue of civil rights, I have refrained from participating in any of the arguments and discussions.

There was a good reason for this. The entire debate centered around the various conceptions and interpretations of applicable law and the constitutionality of the various titles.

I left this burden to be carried by those amongst us who are practicing attorneys.

However, now that the legalistic smoke has cleared away, and in the calmness of the tranquil waters of pure logic, I want to add a few thoughts to the many already expressed.

The need to clear away the roadblocks that have prevented, in many cases, the Negroes' right to vote is of course paramount if we are to finally make our colored citizens, citizens in fact as well as in name.

The economic status of the Negro in all sections of the country leaves a lot to be desired.

If this Nation is to measure up to its worldwide billing as the "greatest place on earth, in which to live, to work, and to prosper," then it behooves all of us to look into some phases of the economics of the labor conditions insofar as the American Negro is concerned.

In most instances, they are relegated to the most menial tasks with the lowest possible wages.

In many cases, both north and south of the Mason-Dixon line, they are huddled into modern ghettos. Few can really move into the more desirable residential areas regardless of their economic standing.

It is my sincere conviction that the only answer is one that must come from equalization, equalization of opportunities. This will lead not to the mixture of the races but, in reality, will let each racial group find and raise its own standards and levels of living socially, economically, and in their conditions of labor.

There are always barriers in the social calendar, and nothing ever done by Congress will change this.

So long as human beings remain human, each will seek his or her own company.

No better example of complete understanding and freedom of action, regardless of race, color, or creed, can be found than in our newest State, the 50th, the State of Hawaii.

The day will come when the Negro has found his place politically by the intelligent and free use of his voting franchise. This will be followed in an orderly fashion by the complete integration of the Negro into our American economy.

To show how bad conditions can get when the economic level of the wage earner reaches a rate below subsistence grades, one need only look at the records submitted to our subcommittee on minimum wage laws.

These testimonials show just about how the Negro fares in the field of economic competition.

The answer and solution to the problem lies in the hearts of men and, in my opinion, the best road to success is through our Christian doctrines and religious revivals.

Hearing Scheduled on H.R. 8146, Affecting Panama Canal Construction Workers With Less Than 3 Years' Service

EXTENSION OF REMARKS OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mrs. SULLIVAN. Mr. Speaker, a number of Members of the House have spoken to me or have written to me in recent days to inquire about the status of H.R. 8146 now pending before the Subcommittee on the Panama Canal of the House Committee on Merchant Marine and Fisheries. I am placing this statement in the CONGRESSIONAL RECORD for the information of other Members who might also be interested in this matter. Hearings on this bill are scheduled to commence Tuesday, April 12.

A word of explanation might be in order, and as chairman of the Subcommittee on the Panama Canal I am happy to explain the background of this matter.

Over a period of many years, Congress received requests from construction workers who helped build the canal a half century ago to provide some sort of annuity in recognition of this service. In 1944 Congress enacted a law extending annuities to all Roosevelt medalholders who had served at least 3 years on the isthmus during the construction of the canal. Ever since, the Congress has received requests from other Roosevelt medalholders with more than 2 but less than 3 years of service to have the act amended to include them, too.

This proposal was considered last June 2 and turned down, on the grounds that if the minimum period of service for these noncontributory annuities is reduced to 2 years, it will still cause arbitrary hardship to those with almost but not quite 2 years of service, and eventually, it would have to be extended in all fairness to everyone who spent any time at all on the construction job. I am merely citing the arguments used against the proposal, not prejudging the issue.

Last year when I set up a hearing on this issue, time was provided to all who wished to be heard. All phases of the controversy were covered in detail. A spokesman for the group which seeks to be included testified for almost the entire morning, covering every conceivable argument in favor of the change. Immediately thereafter, the subcommittee voted unanimously to table all bills before us on this subject for the remainder of this Congress. Later in that session, H.R. 8146 was introduced. It is similar to the bills we tabled.

This year a new drive was undertaken by the persons who would be recipients of annuities under a relaxation of the service requirements, and Members of Congress were in receipt of many letters complaining that I, as chairman of the subcommittee, was preventing H.R. 8146 from being considered. I

would never want to be pictured in that light. I have tried to make clear to the people involved that the entire subcommittee felt the issue had been thoroughly explored and that there was therefore no chance of any legislation being enacted on this matter in this Congress. However, I said if the subcommittee wanted to reopen hearings, I would certainly schedule them.

As a result of the letters received by many Members of Congress urging action on this legislation, our subcommittee has decided to schedule new hearings, if only to assure all concerned that we never have a closed mind on any subject. However, unless new facts are presented above and beyond the information we have received in previous hearings, I doubt very seriously that the results will be any different.

If any Members wish to testify or submit statements for the record, we will be glad to receive their testimony. Furthermore, we have issued an open invitation to the former Panama Canal construction workers to submit any additional facts they may have on the merits of their case.

Birthday of Hans Christian Andersen

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. MULTER. Mr. Speaker, April 2 marks the 155th anniversary of the birth of Hans Christian Andersen, Denmark's most famous author. As we pause to celebrate this day we feel particularly close to our good friends and allies, the Danish people. Indeed our toast to Hans Christian Andersen is also a toast to Denmark and to the Danish people because this great author and his country are so closely tied together in the minds of most Americans.

Hans Christian Andersen is so beloved by Americans because generations of our people have grown up knowing the joy and adventure that are found in Andersen's fairy tales. Who among us as children has not laughed when he read the story of the emperor's invisible new clothes and later in life reflected upon the insight into human behavior shown in some of these simple tales. "The Snow Queen," "The Red Shoes," "Great Claus and Little Claus," and "The Ugly Duckling" are all familiar to American readers as they are to children in many other lands.

Hans Christian Andersen wrote much that was fine besides his fairy tales. But these have become so famous that it seems fair to say that they are common to the experience of growing up anywhere in the Western World. The fairy tales by Hans Christian Andersen have thus become woven into the cultural heritage that is the common memory of Western civilization.

It is well that we take a moment on the birthday of this great man to express this slight tribute.

Postal Facts

EXTENSION OF REMARKS OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD an editorial which appeared in the Milwaukee Sentinel of March 28, 1960, entitled "Postal Facts." I believe that this editorial summarizes the salient facts regarding postal service and postal rates. I commend it to the attention of the membership of this body:

POSTAL FACTS

President Eisenhower's special message to Congress urging another postal rate increase presents one of those seemingly plausible arguments which is easily demolished by facts. Let's consider the facts.

In essence the President says the Post Office is losing a lot of money. Therefore mail rates should be raised to wipe out the loss, or at least come close.

This position, which apparently came to the President special delivery from Postmaster General Summerfield, is based on a fallacy.

It is the error of assuming the Post Office is a business. In reality, in historical precedent, and in every day fact, it is a public service. It cannot possibly be conducted as both.

It is true it costs taxpayers money to run the Post Office Department. It also costs taxpayers money to run the White House, the Commerce Department, the Federal Judiciary system, the FBI—almost every Federal activity.

The costs of such public services are taken for granted. But the costs of the postal service are labeled "deficit" and become issue.

Why? The answer is that the Post Office takes in a great deal of money, about \$2½ billion a year. No other Government department produces anywhere near as much revenue. But because the postal establishment costs more to operate than it takes in, and because a law requires annual reports comparing receipts with costs, the Post Office is singled out and charged with operating at a deficit.

Postal rates actually are a form of taxes. The Post Office does not keep the money it gets for selling stamps, but turns it into the Treasury. Thus, in urging a postal rate increase, the administration is seeking an indirect tax increase.

Finally, the theory that the Post Office is a business doesn't make sense. Would a business charge the same fee to deliver a message across the street as it does to handle a letter from Florida to Alaska? Would a business operate a branch office in every hamlet in the Nation, most of them losing money because of slight patronage? Would a business take on sideline jobs without remuneration, like selling duck stamps or registering aliens?

The Post Office is an essential public service, worth what it costs to operate.

We suggest Summerfield ought to stop proclaiming (and complaining) how much his Department has lost and concentrate on

getting the mails delivered as speedily and economically as possible.

And Congress ought to ignore the request for another boost in rates.

Small Business Investment Act Amendments, 1959

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. MULTER. Mr. Speaker, on March 9, 1960, it was my privilege to appear before Subcommittee No. 3 of the House Banking and Currency Committee in connection with the Small Business Investment Act Amendments, 1959. My statement was as follows:

STATEMENT OF HON. ABRAHAM J. MULTER, A REPRESENTATIVE IN CONGRESS FROM THE 13TH DISTRICT OF THE STATE OF NEW YORK

Mr. MULTER. Thank you, Mr. Chairman, it is always a pleasure to appear before my own committee or a subcommittee thereof as a witness and to give my colleagues a chance to go after me as I go after some of the witnesses who appear before us.

May I first, Mr. Chairman, apologize for not having a prepared statement. I just haven't had the time to get it up and I will try to be very brief.

I think I should direct the attention of the committee to the fact that while the Small Business Committee of the House, under the distinguished chairmanship of the chairman of this subcommittee, the gentleman from Texas [Mr. PATMAN], did submit a report which was unanimously adopted by the Evins subcommittee, and the full committee did adopt the report unanimously, that unanimous adoption of the report was the action of those who attended the meeting.

Unfortunately I was unable to attend the meeting and although I did put in writing to the chairman of the subcommittee some of my objections to the report, the report was adopted that way by the committee, and that is one reason why I wanted to be heard here.

In that report, which incidentally was rather a well prepared report and the result of much hard work and intelligent effort, there nevertheless are some things recommended that I disagree with, and I want to briefly refer to those matters here.

First, there is a recommendation that loans be made to unincorporated small businesses. I think that is a very unwise recommendation. It is no problem and it's a matter of small inconvenience and expense to any small businessman or any small firm, to incorporate today.

Now, it may be that the tax law should be amended so as to give to the small businessman who is incorporated the same tax privileges of reporting as an individual or as a partnership, instead of as a corporation, if part of his stock is owned by a small business investment company. It has been pointed out that the exemption permitting a small business corporation to file a return and pay the taxes as though it were a partnership, does not apply in the event some of the stock is owned by a small business investment company.

If that is the only objection to making loans to corporations rather than individuals, I think the remedy should be by chang-

ing the tax law, and not by permitting loans to be made to unincorporated businesses. As you know, whether it is a partnership or an individual proprietorship, upon death the business must be liquidated and, where you are making long-term loans, that is an extreme disadvantage. I doubt whether any intelligent lending officer will make a long-term loan to a partnership or individual, having in mind that in the event of the accident of death he can't continue the business to pay off his loan, nor is there any successful management that can come in.

The business must either be liquidated or sold to new owners, whereas in making the loan in the first instance he has taken into account the competency of management, and he might not be willing to make the same loan to other management.

Your hands are tied if you are lending the money to an unincorporated business in the event of, as I say, the accident of death. There is nothing to do except liquidate the business and do the best you can to get your money back unless you want to let other management come in that you might not approve of.

So I say the provision in the regulation is a wise one, that these loans and these investments be made only to, and in, corporation.

Now, I hope the committee will have in mind that the purpose of this bill, the Small Business Investment Company Act, was to attract long-term loans which would be in the nature of equity capital and which would not be actually loans, but investments. You should not broaden this statute now so as to make this a general lending agency.

I think we had in mind when we enacted the bill that we didn't want to set up any new banks or any new private lending agencies as such. We didn't want these new small business investment companies to go into general competition with the banks and other financial institutions that are already operating.

We had in mind that the banks and other lending institutions were not making money available for long-term loans and equity capital, and we set this institution up to make that money available. We ought to keep that in mind as to any amendments we are going to offer to this law. That brings to mind the suggestion that we strike out of the act the word "primary" when referring to equity capital.

I think the statute now provides that the primary purpose of the law is to make equity and long-term loans and the suggestion has been made that we strike out "primary."

If you do that, you are just going to convert this into a general lending agency; and that is not, I am sure, the present congressional intent.

It would also open the door to the banks invading this field through the back door. You have already heard that there are some 29 banks which now control these small business investment companies, and if you are going to give them the opportunity to say to a customer coming in for a loan, "You go next door to the small business investment company that we control and make your arrangements there, and then come in here and we will give you subsidiary financing," they are going to evade the intent of this act.

Mr. PATMAN. Isn't there any encouragement in the law for that, Mr. MULTER, in that a 100-percent tax deduction is allowed on losses on convertible debentures purchased by the bank's subsidiary small business investment company, whereas if the transaction was in the form of a loan made directly by the bank it would not get the benefit of that deduction?

Mr. MULTER. That is right.

Mr. PATMAN. Therefore, your statement, I think, is entirely correct that the inducement will be to refer loans to the SBIC.

Mr. MULTER. Yes, and that also brings to mind the situation that I think the chairman has indicated he is concerned about, and which gives me considerable concern. That is the fact that we already have about one-third of the small business investment companies controlled by banks.

Now, if we intended that the banks should be able to set up these small business investment companies, or if the Congress intends that that be permitted to be done, then let's be forthright about it and change the statute.

We said in the first instance that it requires at least 10 individuals to form a small business investment company. In every one of those 29 instances where a bank has formed a small business investment company, the bank named 10 dummies, and the bank controls the corporation, and the bank names the directors.

Now, if that is what we want, let's change the law. Let's not have them do by indirection what they should be permitted to do directly.

On the other hand, if we intended what we said, that this requires 10 individuals, then let's make sure it is 10 individuals who are putting in their own money and who are going to elect the directors and run the institution.

Now, maybe the banks can come in and make a good argument as to why they should be permitted to own, control, and operate these small business investment companies. If they can make such an argument, let's change the law and let them come in through the front door. Don't have a law, as we have now, which says that there must be 10 individuals, and permit a bank to come in through the back door and name 10 dummies.

I don't think we intended that, and I don't think we should permit it to go on. I think we ought to say something in any report that may accompany any bill coming out of this committee on that point.

That brings us to the question of whether or not additional loans should be made without the consent of the small business investment company.

If they are going to the small business investment company for long-term financing, and it is going to be just that—long-term financing; not interim financing—and on top of that they are going to go to the bank which controls the small business investment company and get subsidiary financing, you can be sure that somewhere along the line we are going to run into trouble. If the bank is in a position to do this subsidiary financing, it should certainly be in a position to do it as primary financing.

They shouldn't put the small business investment company that they control in a position of making the primary financing, at, as you have heard, up to 15 percent interest, and they take the secondary financing at 5 or 6 percent.

If that loan is good enough for the bank as secondary financing at 5 or 6 percent, they ought to make the primary loan at 5 or 6 percent instead of letting the small business company grab off the cream and let them hold the subordinate financing.

There has been a suggestion that the so-called cross-stream loan provisions of the Bank Holding Company Act of 1956 be waived to permit a bank that is a subsidiary of a holding company to invest in a small business investment company owned by the same holding company.

I think we may have gone too far already in permitting bank holding companies to establish small business investment companies. I did not realize the Small Business Investment Act of 1958 would have that result, and I find it a little difficult to follow the complicated interpretations of the 1958 act, the Bank Holding Company Act, and

the Revised Statutes which lead to that result. This interpretation may be the opening wedge to destroy the Bank Holding Company Act's prohibitions against banks engaging in nonbanking businesses. We may be going right back to the days when all the trouble in the banking field was caused by allowing investment bankers to own and control commercial banks. This must not be permitted to spread.

Mr. PATMAN. Is this the only exception you know of, Mr. MULTER? Is this the only instance in which a bank holding company is permitted to own a nonbanking business?

Mr. MULTER. There are, of course, limited exceptions under section 4(c) of the Bank Holding Company Act, but none which violate the basic principles of the act as I think this does.

But there is another basic principle of the Bank Holding Company Act which so far has not been violated, and it is embodied in section 6 of the act. Section 6 prevents a holding company from forcing one of its subsidiary banks to make loans to another of its subsidiaries, or to invest in any other fashion in another subsidiary. When we enacted that prohibition, we had before us at least one concrete example of the abuses which can result from self-dealing between two subsidiaries of the same holding company. The best way to protect a subsidiary bank from being forced into making a bad investment in another subsidiary is to prevent such dealing altogether.

So I cannot go along with the argument that the proposed amendment would simply treat holding company subsidiary banks the same as other banks. This self-dealing situation does not arise for other banks. If they invest in a small business investment company, they do so at arm's length. But the subsidiary bank is not dealing at arm's length with the small business investment company when they are both under the common control of a holding company. I think perhaps we have already gone too far in breaking down the sound restrictions of the Bank Holding Company Act when we permitted bank holding companies to form small business investment companies. Let's not go any further with it; let's not take this proposed next step of creating a situation where their subsidiary banks can be forced to invest in their subsidiary investment companies.

Now, there is one other suggestion that has been made, and that is that we grant the small business investment company an exemption from the Investment Company Act.

Now, the only reason to do that is to permit the small business investment company to issue stock options. I think there is nothing worse in the field of corporate law—and that includes banks and insurance companies—than this granting of stock options, usually done by the directors for the benefit of the officers, who are in control of the situation, most of the time without notice to the stockholders.

It is an unfair way of diluting the capital, or diverting capital of a company to those who control it. If they are under the Investment Company Act, they would at least have to make the disclosures required by the Investment Company Act. I urge you not to amend this Small Business Investment Company Act so as to grant that exemption.

That, in the main, is my statement, Mr. Chairman and gentlemen.

Mr. PATMAN. Thank you very much, Mr. MULTER. We value your judgment on these matters, and what you have said will receive very careful consideration by the members of this subcommittee.

Are there any questions, gentlemen?

If not, thank you very kindly, Mr. MULTER.

If you desire to supplement your remarks and extend them to include anything germane, you may do so.

Mr. MULTER. Thank you very much, Mr. Chairman. You are always very kind.

Save Our River

EXTENSION OF REMARKS OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I would like to call attention to an editorial which appeared recently in the *Evening Star*. This editorial emphasizes the need for accelerated completion of a thorough study of the Potomac River, lest the present very-serious situation becomes a real emergency before corrective action can be carried out.

The editorial follows:

[From the *Evening Star*, Mar. 24, 1960]

SAVE OUR RIVER

A slow death for the Potomac River during the next decade or two is foreseen by an Army engineer—unless remedial measures are taken soon. This is a prospect too alarming to permit of further dillydallying by Congress on appropriations to avert such a disaster. Yet Congress in recent years has seriously hampered the engineers' survey of the river—a necessary preliminary step toward planning and building water-famine safeguards for the Washington area.

The outlook for a dried-up Potomac at Chain Bridge and a stagnant salt-water marsh in the tidal section along the city's waterfront was described to the Potomac River Development Association by an outstanding authority, Brig. Gen. Thomas H. Lipscomb, chief of the Army Engineers' North Atlantic Division. It could happen by 1975, General Lipscomb declared, unless, in the meantime, adequate water-storage facilities are built above Washington's water intake.

This is the strongest warning on the plight of our ailing river yet to come from the Army, which has responsibility for insuring the Nation's Capital of an ample supply of water, even in times of drought. General Lipscomb explained that the situation is becoming critical because of the phenomenal expansion of population in the Washington metropolitan area. He estimated that the "metro" population will rise from today's 2 million to 3 million during the next 15 years. Then the city and suburbs will be using water as fast as it is collected by the present water-supply dams at Little Falls and Great Falls. There will be nothing but a dry gulch between the Little Falls dam and tidewater, according to the Army water expert. And the stagnation of sewage-polluted tidewater in Washington's front yard would be an intolerable nuisance and health menace.

Congress would not want such an emergency to develop any more than anyone else. But the risk of dangerous conditions is increasing as the Army Engineers' survey of the basin continues to lag not only for want of sufficient funds but because of restrictions placed by Congress on the extent of the engineering study. For example, Congress last year cut the engineers' request for \$500,000 to \$392,000 and decreed that none of the money could be used in planning dams for flood control. Yet flood control and water

supply are so closely related that joint storage facilities might serve both needs.

Congress, in weighing appropriations for completing the river survey, must pay attention to the solemn warning issued by General Lipscomb concerning the threatened deterioration of the Potomac. There should be an end to this foolhardy business of slashing survey funds and imposing stupid and illogical restraints on the surveyors.

The Tragic Death of Attorney Harry Meyers of Chicago

EXTENSION OF REMARKS

OF

HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. LIBONATI. Mr. Speaker, it was well said by the sages through the ages that—

You who mourn the loss of loved ones, let there come the comfort that, though the dust returns to the earth as it was, the spirit returns to God who gave it. Death is not the end. Our dear loved ones have passed through the gateway of life into the peace of the hereafter that endureth always. We know that all of us must tread the same path, though we know not when the hour may strike. Let us so live that the coming of that hour shall find us unafraid. May our deeds do honor to the memory of our beloved whom Thou has taken unto Thyself. In unshaken trust in Thy wisdom and loving kindness, we give praise unto Thy name.

And so these reflections are so befitting to alleviate the great pain and sadness befalling the relatives of my distinguished friend and celebrated lawyer, Harry Meyers, who for many years practiced law in the city of Chicago.

It was his sad fate to meet death as a victim of the midair disaster in the explosion of the Northwest airliner turboprop Electra jetplane near Tell City, Ind., in the Ohio River Valley, while en route to Miami. He was a bosom friend of the distinguished jurist, the Honorable John A. Sbarbaro, and had accompanied him on that ill-fated journey.

They always traveled together. Their loss was mourned by the bench and bar of Illinois.

He was a calm, gentle person, whose depth of understanding in the law marked him as a leader at the bar. He was accepted as an authority in his chosen field—the criminal law. He was kindly to and considerate of his fellow humans. It was a natural thing that he and Judge Sbarbaro were attracted to one another in a close bond of friendship.

The completeness of this great tragedy in the consummation of the mortal remains of all the passengers—attests to the suddenness of the disaster.

As though in this life they were reduced suddenly into the fading shadows of another world—a world of everlasting grace, where the soul retains the identity

of the individual in his corporeal existence upon the earth. In the world of men we cannot but accept the belief that everlasting life is the reward for these who have kept the faith. These two friends inseparable in life were inseparable in death—God knows.

With prayers and sincere condolences to the eminent physician Dr. Max Meyerovitz, of Chicago, who practiced for 50 years near my home at Taylor and Racine Avenue, and his good brother Ben. May God give them strength in this their saddest hour. We, their friends, pray with them for his soul—may he rest in peace.

Unemployment

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. SAYLOR. Mr. Speaker, to those of you whose constituencies are not plagued by pockets of unemployment, I ask that you consider the circumstances of thousands of your fellow American citizens in various areas of the several States where there are not enough jobs to go around. Many are without proper nourishment for themselves and their families. Homes are without repair. Children are improperly clothed. It is a shameful reflection on a Nation which boasts of the world's highest living standards.

Our people want a chance to recover their status as members of the economic community. Congress can provide this opportunity by enacting the depressed area legislation which I and numerous other Members of both the House and Senate have introduced and long supported. I realize that some of these bills have been tampered with in normal political maneuverings, but I am confident that a majority of the Members of this legislative body will cast affirmative votes if the leadership of the House will present a reasonable measure intended to stimulate business and industrial activity in chronically depressed regions.

I have time and again pledged to support sound legislation of this nature regardless of authorship. Many excellent bills introduced by our friends on the Democratic side of the aisle have been awaiting action for more than a year. I would be happy to vote for passage of any one of these particular measures. And I firmly believe that there are a sufficient number of members of both parties, concerned about the prevailing pockets of unemployment in Pennsylvania and elsewhere, to pass a distressed area bill without hindering political amendments if we are but given a chance.

Mr. Speaker, is it asking too much to expect the Rules Committee, which is in control of the Democratic side, to bring out the distressed area bill now before it?

The Oregonian Criticizes Summerfield

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the March 26 issue of one of the leading newspapers of my State of Oregon, the Portland Oregonian. This editorial clearly describes the ridiculous situation created by the American people's self-appointed protector. Postmaster General Summerfield not only tries to protect us all from the salacious wiles of the pornographers, but he also protects us from whatever foreign reading matter he considers unsuitable for us.

As the editorial points out, our great free press was quite active in reporting Khrushchev's every word while he was visiting our country, but delivery of the same words mailed from Russia to an individual is held up until the addressee is notified and affirms his desire to receive the mail.

This is not only ridiculous and expensive, but it infringes on our rights as American citizens.

[From the Portland Oregonian, Mar. 26, 1960]

POST OFFICE CURTAIN

Although William H. Ehrman did not receive delivery on the magazines mailed to him from Russia, he has performed a signal service for his fellow Portlanders: His experiment with an exchange of periodicals with the Russian people has exposed to local readers the ridiculous Federal policy of intercepting whatever postal authorities interpret to be "political propaganda" from abroad.

Bureaucracy, aiming its shotgun at subversion, has, as is not uncommon, peppered holes in the shrinking fabric of American personal liberty.

It is not conceivable that the Soviet Government is conducting its worldwide espionage system through the pages of a picture magazine. Thus it must be concluded that the U.S. law which supports such interceptions in the mails is designed to protect the American addressee from contaminating himself and his neighbors by reading the Red line.

How silly. Mr. K. travels through the country and his every word of political propaganda is relayed to readers by a free press. The U.S. Government, itself, has agreed by contract with Russia for the distribution here of a picture magazine, U.S.S.R., which is full of sweet-coated propaganda. Such magazines as Britain's New Statesmen and Nation are well spiced with "political propaganda" of a sort. Is any of this seriously harmful to the national security? Would it endanger the national security to permit Mr. Ehrman or any of his neighbors to read the magazine Soviet Union? Of course not.

The shocking thing is that the U.S. Government has adopted tactics strictly out of the Soviet book. A postmaster's interception of a citizen's mail on such flimsy and offensive grounds does more damage to American liberty than could possibly accrue from the widest possible U.S. distribution of Soviet literature.

Jane Addams

SPEECH
OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. PUCINSKI. Mr. Speaker, this year marks the centennial of the birth of a great and dedicated woman whom Chicago claims as its very own—Jane Addams of Hull House.

I am proud to join with my colleagues in Congress today in paying tribute to this remarkable woman who made such a significant contribution in the field of social welfare when she pioneered many social reforms for the aid and assistance of the indigent and the unfortunate.

Hull House, on the near West Side of Chicago, stands today as a memorial to this woman's deep understanding of the problems confronting our society. Miss Addams had charted a new concept in the field of social welfare and has brought living meaning to the gallant people of her profession who are making such a profound contribution, particularly in the field of human relations.

Her name has become a symbol of social reform throughout the world. Her followers are legion and her philosophy has become an inspiration for this growing profession of social workers.

Jane Addams had the unique faculty of analyzing human frailties and she possessed the bold determination to do something about those frailties.

Miss Addams confronted our society with new concepts of social conscience at a time when too many people had looked upon social workers as strange phenomena that should be judged with extreme care and caution. She made her mark at a time in our history when a large segment of our society insisted upon viewing the problems of the indigent as a natural order of things. It was through her stubborn insistence that organized society finally began to recognize the needs of its less fortunate neighbors and developed concepts reflecting a social conscience and moral awakening in America.

Miss Addams was born in Cedarville, Ill., on September 6, 1860. Since Congress will not be in session on the actual date marking her birth, I think it is fitting that we pay tribute to her great contribution at this time.

Early in life, Miss Addams was exposed to the social injustice of slavery through her father's active participation in the abolitionist movement.

It was this personal contact with one of the most inhuman practices of our history that inspired Miss Addams to heights of social reform equalled only infrequently by her contemporaries.

Her many years of dedicated work in Chicago in developing programs to deal with juvenile delinquency; programs designed to help immigrants understand the concepts of democracy; projects which to this day are helping those from broken homes, and many other endeavors, have won her the eternal gratitude of the people of Chicago.

When Hull House opened in 1889, at the corner of Polk and Halstead Streets, it was Jane Addams who provided the inspiration and guidance to bring together the polyglot community of immigrants into a unified area of Americans. She knew well the problems that these immigrants encountered in trying to adjust themselves to their new way of life. Moreover, she knew the great difficulties that had to be overcome because of language barriers. Through prodigious patience, Jane Addams welded all of these people into an inspiring community of Americans determined to make their own children produce a worthwhile contribution to this Nation.

It is fitting that we should pay tribute to Miss Addams today when the White House Conference on Children and Youth is being held in the Nation's Capital.

The fact that more than 7,000 social workers and others dedicated to the field of social welfare are meeting here in Washington this week, the largest number ever to attend such a conference on youth, serves to reflect on the impressive contributions which Miss Addams herself brought to the social workers' profession.

Thousands of Americans are today proudly carrying the banner as social workers because of the high esteem that Miss Addams has won for their profession.

The social worker of the past, frequently insecure and unjustly misunderstood, today can take pride in his profession because of people like Jane Addams who had elevated this profession to a new standard of respect for all America.

We in Chicago are proud to be able to claim Miss Addams for our very own. May the principles and dedication which she made so thoroughly a part of her life, long serve as a symbol of inspiration to those who are carrying on her magnificent ideals today.

The Late Russell V. Mack

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. ROBISON. Mr. Speaker, it was necessary for me to be in my congressional district on official business last Monday. Therefore, I was spared the personal shock of witnessing, as so many of my colleagues did, the sudden and tragic death of my friend and colleague on the Committee on Public Works, Russell V. Mack. But the shock I experienced on hearing this sad news on Tuesday morning was nonetheless real.

I think this was because Russ Mack was such a vibrant person, full of the joys of living, drawing strength and vitality from the challenge of the responsibilities he shouldered so well. He was a champion of and a stubborn and dedi-

cated fighter for the things in which he believed. He fought with equal determination and skill against those other things which he believed to be wrong. There were times, during our committee work together, when we disagreed, once rather sharply, but all of us who have ever found him on the other side of our own position, whatever it might be, have respected his boundless integrity, his candor and honesty, and, most of all, the friendly arm he put upon our shoulders after the battle was over.

John Donne wrote, years and years ago—

Every man is a piece of the continent, a part of the main; if a clod be washed away by the sea, Europe is the less as well as if a promontory were, as well as if a man or thy friends or if thine own were; any man's death diminishes me.

It is quite true that the work of our committee and of this Congress will go on, as we close ranks together, almost as if nothing had happened. And yet the strength of our Committee on Public Works of this Congress and of this Nation have been "diminished" by the loss of a man of the stature of Russ Mack. He will be sorely missed.

Mr. Speaker, my heartfelt sympathy is extended to Mrs. Mack and to the other members of the family.

Postal Facts

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Detroit (Mich.) Times of Monday March 21, 1960:

POSTAL FACTS

President Eisenhower's special message to Congress urging another postal rate increase presents one of those seemingly plausible arguments which is easily demolished by facts. Let's consider the facts.

In essence the President says the Post Office is losing a lot of money. Therefore mail rates should be raised to wipe out the loss, or at least come close.

This position, which apparently came to the President special delivery from Postmaster General Summerfield, is based on a fallacy.

It is the error of assuming the post office is a business. In reality, in historical precedent, and in every-day fact, it is a public service. It cannot possibly be conducted as both.

Certainly it costs taxpayers money to run the Post Office Department. It also costs taxpayers money to run the White House, the Commerce Department, the Federal judiciary system, the FBI—almost every Federal activity.

The costs of such public services are taken for granted. But the costs of the postal service are labeled "deficit" and become issue.

Why? The answer is that the Post Office takes in a great deal of money, about \$2½ billion a year. No other Government de-

partment produces anywhere near as much revenue.

But because the postal establishment costs more to operate than it takes in, and because a law requires annual reports comparing receipts with costs, the Post Office is singled out and charged with operating at a deficit.

Postal rates actually are a form of taxes. The Post Office does not keep the money it gets for selling stamps, but turns it into the Treasury. Thus in urging a postal rate increase, the administration is seeking an indirect tax increase.

Finally, the theory that the Post Office is a business doesn't make sense. Would a business charge the same fee to deliver a message across the street as it does to handle a letter from Florida to Alaska?

Would a business operate a branch office in every hamlet in the Nation, most of them losing money because of slight patronage? Would a business take on sideline jobs without remuneration, like selling duck stamps or registering aliens?

The Post Office is an essential public service, worth what it costs to operate.

We suggest Mr. Summerfield ought to stop proclaiming (and complaining) how much his department has lost and concentrate on getting the mails delivered as speedily and economically as possible.

And Congress ought to ignore the request for another boost in rates.

The Issue Outlined

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. IRWIN, Mr. Speaker, pursuant to permission previously granted, I am inserting in the RECORD an editorial from the February 13 edition of Business Week which outlines the issue of medical assistance for our older citizens. The editorial:

WHAT THE AGED NEED

It's obvious that the swift increase in the number of older people in our population poses new economic and social problems. These problems are now undergoing the most thorough and searching examination ever.

There was a time when providing a basic pension program was the great need—a need fulfilled in the main by establishment of social security in 1935 and by the widespread development of private plans in later years. Now the most pressing need of this population group is medical care, especially assistance in case of major, crippling illnesses.

Medical expenses of older people are at least three times those of younger citizens. While many can cope with the normal run of illness, few oldsters have the financial resources to meet the cost of catastrophic illnesses.

Many had hoped that the private health insurance companies and medical groups could meet this problem by coming up with some sort of health insurance plan at rates older people could afford. But they haven't, and even President Eisenhower and Health, Education and Welfare Secretary Flemming, who were so anxious for just such a solution, now feel there's no recourse but for the government to step in to provide coverage against catastrophic illness.

The cost would probably be financed by a supplement to the social security payroll

tax. At the same time, individuals would be encouraged to continue their basic health insurance policies on into retirement to defray normal medical costs.

If the government steps in to provide insurance against catastrophic illness of the aged, it will not be moving in where private industry can do the job. It will be assuming responsibility in an area where industry has found it cannot offer the protection needed.

Support Is Found for Benson View

EXTENSION OF REMARKS

OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. LINDSAY. Mr. Speaker, Monday morning quarterbacking seems to be a prerogative of the American people. In the case of the problems facing agriculture, politicians, pundits, and polltakers all have their pat little answers.

Many of those answers have been predicated on the premise that the policies of the Republican administration and, more specifically, Agriculture Secretary Benson, just will not work.

It is always difficult for those wedded to the politics of agriculture to take a long, searching look at the economics of agriculture. This is why the premise of criticism is so frequently found to be false.

This was clearly pointed up by the latest crop report on indicated acreage plantings of our major crop commodities. And at least one columnist offered an extremely able analysis of just what the crop report implies.

I ask that the March 21, 1960, New York Times financial page article by one of the Nation's most able reporters, Edwin L. Dale, Jr., of the Times' Washington staff, be inserted in the RECORD for the perusal of my colleagues.

[From the New York Times, Mar. 21, 1960]

SUPPORT IS FOUND FOR BENSON VIEW—BACKING REPORTED FOR THEORY THAT FARMERS GROW LESS AS SUPPORTS ARE CUT—UNNOTICED QUIRK CITED—PECULIARITY OF 1959 LAW ON CORN ACREAGE LED TO CROP RISE AS PROF WAS PARED

(By Edwin L. Dale, Jr.)

WASHINGTON, March 20.—Could Ezra Taft Benson be right after all?

This question was being asked here last week as a result of some new evidence on the impact of changes in price supports on what farmers do and do not grow.

At issue is the major theoretical and practical dispute over the proposals of Mr. Benson, the Secretary of Agriculture, for solving the farm problem. Mr. Benson thinks the road to a solution is lowered price supports, to bring production into line with demand.

The opponents of the plan—quite apart from farmers who do not like to see lower prices—have had one major criticism. It is that as price supports go down, farmers probably will grow more, in order to keep their total income from declining. Thus, the Benson plan, besides being painful to farmers, would just make the situation worse.

The new evidence is not conclusive. But it indicates that the Benson opponents may be wrong, at least on this key point.

UNUSUAL FACTORS NOTED

The evidence relates to plantings of corn and feed grains last year and this year. Because of a widely unnoticed quirk in the corn situation, last year's plantings were regarded by the Benson foes as a vindication of their stand. Actually, according to officials, both last year's actual results and this year's planting intentions prove no such thing.

Last year, corn plantings rose sharply at the same time as an apparent sharp reduction in price supports, under a new law ending acreage controls and reducing supports. Actually, corn price supports for the great majority of growers rose last year, rather than fell.

This is because most farmers had not complied with acreage controls and thus had received supports at the noncompliance level. Under the new law, the support level was sharply lower than the old compliance level, but a little higher than the old noncompliance level. Thus, to most farmers, Uncle Sam was guaranteeing an increase in prices. Plantings rose.

Plantings for the other feed grains, on which support prices were cut last year, were reduced.

CORN A CASE IN POINT

This year, corn supports fell slightly from last year's level. Nationwide planting intentions reported last week, were essentially unchanged from last year—no decrease, but no increase, either.

Moreover, there was an important geographical shift. There were more plantings in the traditional and efficient corn-growing area, the Midwest, and lower plantings elsewhere. The reduced price supports may have removed the incentive to produce corn in the case of growers who traditionally had not done so.

In the feed grains there was no change in price supports this year, after last year's reduction. Plantings overall for the four grains were slightly reduced.

For soybeans, which have had a high price in the market, plantings rose.

None of this evidence proves that lower supports will greatly reduce production, although last year's feed grain performance was suggestive. What the evidence does indicate is that lower supports do not bring increased production. Mr. Benson and his backers feel that price-support reductions have not been pushed far enough to induce the cut in plantings needed to solve the surplus problem.

The Late Honorable Russell V. Mack

SPEECH

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1960

Mr. ROONEY. Mr. Speaker, I do not think I was ever as shocked in my life as I was not many minutes ago when our distinguished colleague, the gentleman from Washington, Hon. Russell V. Mack, collapsed and died here in the well of the House. This tragic death should be a warning to all of us who work so hard at our congressional duties that there comes a time when we must slow up. Russell Mack never slowed up since he was first elected to the House of Representatives about a dozen years ago. He was a devoted public servant and the

second ranking minority Member of the House Public Works Committee. His untimely passing is a great loss to the people of his district, his beloved State of Washington, and the Nation.

I extend my deepest sympathy to his devoted wife in her bereavement.

Minshall Opinion Poll

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. MINSHALL. Mr. Speaker, each year I send out a questionnaire to the home of every registered voter in Ohio's 23d District. The questions are based on some of the vital issues coming before the Congress. The response has always been excellent, and helps me sound out the sentiment of the voters on these important questions. Under leave to extend my remarks, I ask that the Minshall poll for the 2d session of the 86th Congress be included in the RECORD:

EIGHTY-SIXTH CONGRESS, SECOND SESSION

DEAR FRIENDS: On previous occasions, I have sent out questionnaires seeking expression on pending issues before the Congress. Your response has been excellent. Again I am requesting your opinions on these vital issues. Having the benefit of your views will better enable me to represent you in Congress.

Please place this card inside an envelope marked "Minshall poll" and mail to me at Post Office Box B-221, House Office Building, Washington 25, D.C. Your views will be held in strict confidence.

Sincerely yours,

WILLIAM E. MINSHALL,
Member of Congress.

MINSHALL OPINION POLL

1. Do you consider the proposed \$41 billion defense budget adequate? No opinion ☐ No ☐ Yes ☐

2. Do you favor Federal aid for local school construction? No opinion ☐ No ☐ Yes ☐

3. Do you favor Federal aid to raise teachers' salaries? No opinion ☐ No ☐ Yes ☐

4. Do you believe we should continue our foreign aid program? No opinion ☐ No ☐ Yes ☐

5. Do you favor the Eisenhower-Khrushchev exchange of visits? No opinion ☐ No ☐ Yes ☐

6. Do you believe the Federal budget should be kept in balance? No opinion ☐ No ☐ Yes ☐

7. Who is your choice for the next President of the United States? -----

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentations be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. _____ addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.
